To meet your specific filter requirements, ESC first constructs a mathematical model based on actual physical components available. Through the use of high speed computer techniques with ESC's inhouse IBM 1130, the electrical characteristics and physical dimensions of your proposed filter are immediately tested and "proven out." Typical computer output data includes input impedance, attenuation, phase, phase delay, and group delay—all versus frequency. It is therefore possible for ESC to evaluate your filter needs, develop a suitable design and submit a quotation in a fraction of the time previously required.

The products illustrated to the right were designed and produced by ESC and are representative examples of our filter capabilities.

Please do not request that we send you a filter catalog or other descriptive literature—we don't have any. All of our designs are custom. We do have a Filter Questionnaire, however. If you fill it out, we will be able to discuss your specific requirements with you.

RFI TUBULAR FILTER WITH CONTROLLED OVERSHOOT AND RISE TIME

FREQUENCY RESPONSE

Flat within ± ½ db to 200 kHz
2 MHz > 3 db
30 MHz > 60 db
30 MHz—1 GHz > 40 db

Z source = 75Ω
Z load = 50kΩ

ULTRAMINIATURE TELEMETERING FILTERS

Center frequencies from 400 Hz to 165 kHz. Available in bandwidths of ± 7½% and ± 15% of center frequency (fc)
Z source/load = 10kΩ

Epoxy case and straight leads for printed circuit mounting

TELEPHONE LINE SIMULATORS

Duplicate worst case conditions of amplitude and envelope delay of Bell Telephone data channel 3002 and C1, C2, and C4 conditioning.

Insertion loss=16 db at 1000 Hz
Impedance Z source/load=600Ω balanced
Write for full specifications.

3002 channel

FILTRON

FSR-W POWERLINE® FILTERS

EMI/EMC FILTERS FOR 5-200 AMP CIRCUITS

ATTENUATION: 100db: 14KHz — 10GHz MIL-STD-220A — FULL RATED LOAD

FEATURES

Individual phase filters — with hermetically sealed compartments, filled with DURANOL® fluid impregnant for superior convective cooling. Operate at 85°C without external cooling. Max. temp. rise 25°C. Inner filters field-replaceable without special tools.

LIFE TERM® terminals. Indestructible alumina ceramic terminal assemblies brazed to hermetically sealed compartments. Flexible lead to electrical connection device.

Safety — the all-welded filter compartments are leakproof . . . soldered seams. The DURANOL® fluid is non-flammable; ending of fire or explosion. Complies with overload requirements of MIL- 140% of rated current for 15 minutes. Short term current sur bility in excess of 10 times rating without damage.

For more details and types ask for FILTRON Bulletin FSR-W.

FSR-W-200B4-E	4 x 200 AMPS	25	40	17	3	545 LBS.

Available with grounded neutral conductor terminals in case. FSR-W-5B2-N-E, etc.
Voltage rating: 0-277VAC line-to-neutral or 0-480VAC line-to-line, 600VDC max.

Filter discharge units — ask for FILTRON Bulletin FD

RFI/EMI SHIELDED ENCLOSURES

The FIL-SHIELD FSE-124 RFI/EMI shielding system is designed to meet or exceed the vast majority of shielding requirements. This system is available in both standard modular enclosures and custom-designed modular enclosures to meet exacting specifications in government, industry, research and development, university or hospital use.

The basic design incorporates new production techniques which require no gasketing materials of any kind. Weld nuts on the corner and intermediate framing members eliminate screws that penetrate the framing members; thus there can be no RFI/EMI leakage as a result of a loose screw. In addition, this exclusive FIL-SHIELD weld-nut feature provides a structure that is tamper-proof from the outside . . . an important consideration in Secure Communications.

The basic purpose of a shielded enclosure room — to attenuate radio-frequency and electromagnetic interference — is defeated if the doors, attenuducts, waveguide penetrations, etc. do not provide attenuation comparable to that of the walls. In addition, the door closure mechanism must be troublefree. Our FIL-SHIELD FSE-124 system fulfills all of these requirements — a fact proven, not only in our own test programs, but in installations all around the world over the past 20 years.

For complete details, ask for Bulletin FS-124.

FS-124 RFI/EMI ATTENTUATION

TUBULAR FILTERS

EMI/EMC FILTERS FOR .1 - 10.0 AMP CIRCUITS

ATTENUATION: 80db: 150KHz — 1GHz MIL-STD-220A — FULL RATED LOAD

F-201 tubular filters are designed to attenuate conducted or ed interference in powerline and communications equipment, digital ts including computers, solid-state switchgear and other sensitive onic equipment, commercial, industrial and military.

filter are small, compact and lightweight. Their tubular configuration, evolves from the shape of the rolled capacitor section and the lat inductor, makes them ideal for networks requiring high component ging density. Other attenuation values available; "L," "T" and ex- d network types also available. Can be furnished with threaded screw nals, solder lug terminals, also shielded leads.

FILTRON bulletin F-201.

Specification: MIL-F-15733-( ) as applicable.

Certificate of compliance furnished without extra charge.

Qualification test data (similarity basis) available without charge.

er lu erminals available in flat or right angle style. All types available with screw thread terminals. Specify thread size (TT) and thread length (TL).

GENISCO

EMI/RFI MINI-FILTERS

A COMPLETE LINE OF SUBMINIATURE CONTROL FILTERS

standard outline

1. Tolerance: ±0.010 unless otherwise specified.
2. Case material and finish: steel, gold plated (optional).
3. Case marked with Genisco G and part number.
4. Typical weight: 5 to 12 grams.
5. Recommended torque during installation: 40 in. oz.
6. Each filter is supplied complete with lock washer and nut/MIL-STD-130.

optional thread & terminals

The following optional thread lengths and terminals may be specified by adding a -1, -2 or -3 to the part numbers in the tables on pages 6 through 10.

−1 −2 −3

Note: All other dimensions and tolerances remain as shown on the standard outline configuration.

specifications

CURRENT RATING:	from 0.1 to 10 Amperes, see ta for specific values
VOLTAGE RATING:	50, 100 and 200 VDC, 28 and 115 0 - 400 Hz, see tables for rati
INSERTION LOSS:	from 10 KHz to 1 GHz per MIL 220A, at 25°C
TEMPERATURE RATING:	−55 to +125°C, at rated vo and current
DIELECTRIC WITHSTANDING VOLTAGE:	twice rated line voltage at 25°C, surge current limited to 50 MA
INSULATION RESISTANCE:	500 megohms minimum at rated age and 25°C after two mi charge.

TEST SPECIFICATIONS

RIOR TO SHIPMENT

ch G sco Mini-filter is tested for the following performance char- eris prior to shipment:

SERT LOSS: checked to the individual loss curves published on eced Genisco pages.

SULA N RESISTANCE: to the value specified on the first page of nisc lini-Filters.

ELEC C WITHSTANDING VOLTAGE: to the value specified on the first ge o enisco Mini-Filters.

ORKM SHIP: each filter is inspected for conformance to the outline awin nd for workmanship to best instrumentation standards.

UAL CATION TESTS - ENVIRONMENTAL

nisc Minifilters will meet or exceed the following environmental ecifi ions.

LT S AY: Per MIL-STD 202 Method 101 Condition B which tests the ter f 48 hours at 35°C in a 5% saline solution after which the filter insp ted for appearance and tested for performance.

MID Y: Per MIL-STD 202 Method 103 Condition B. The filter is sub- cted 90% relative humidity for 96 hours at 40°C after which the ter ested for performance.

MOISTURE RESISTANCE: Per MIL-STD 202 Method 106 B. The filter is cycled between temperature and humidity limits for a period of 216 hours after which the filter is examined for appearance and its performance tested.

TEMPERATURE CYCLING: Per MIL-STD 202 Method 102A Condition D. The test cycles the filter 5 times from −55 to +125°C during which time the filter is in full electrical operation.

IMMERSION CYCLING: Per MIL-STD 202 Method 104A Condition A. In this test the filter is immersed in water at 25°C for 15 minutes per cycle, for two cycles. Afterward the filter is inspected and performance tested.

MECHANICAL SHOCK: Per MIL-STD 202 Method 205 Condition C. The filter is given 6 shocks (each axis) each of which is 11 msec in duration, half sine wave of 50G peak amplitude and is then performance tested.

MECHANICAL VIBRATION: Per MIL-STD 202 Method 204 Condition B. The filter is mounted on a vibration table and is subjected to 12 full cycles, each 20 minutes in duration, 10 to 2000 Hz, at 0.06 DA. Performance tests follow.

BAROMETRIC PRESSURE: MIL-STD 202 Method 105 Condition C. 125% of rated voltage is applied while the filter is at a pressure equivalent to an altitude of 70,000 feet. The filter is then performance tested.

TERMINAL STRENGTH: MIL-STD 202 Method 211 Condition A. Each terminal is pulled with a 4½ lb force axially and then examined for seal and mechanical integrity.

LIFE: MIL-STD 202 Method 108A Condition C. A 500 hour test at rated voltage and current at 125°C.

GENISCO

ACTIVE FILTERS

Genisco Active Filters

- THE COMPLETE QUALITY LINE
- PARTS STOCK IN DEPTH
- FAST PROTOTYPE SERVICE TO YOUR CUSTOM REQUIREMENTS
  - **BASIC 2-POLE ACTIVE MODULE**
    Preset to any specified fo and Q values. Completely self-contained — no external resistors or capacitors.
  - **ACTIVE FILTERS**
    2, 4, 6, or 8-pole Chebyshev, Butterworth, or Bessel type responses. Complete and ready to plug in.
  - **STANDARD COMB FILTERS**
    Bandpass filters preset to IRIG standards. Ready to use.
  - **PROGRAMMABLE ACTIVE FILTERS**
    Externally set fo and Q values, from below 1 Hz to 10 KHz, Q values to above 500.

DESIGN incorporates quality multiloop negative-feedback (State Variable) circuit for excellent long-term stability and minimum sensitivity to component aging and supply voltage and temperature variations, plus exceptional high-Q capability over a wide frequency range. Compact dual-in-line package is ideal for printed circuit or wire wrap board mounting.

COMPUTER-DIRECTED PRODUCTION and standard basic modules stocked in depth enable Genisco to ship prototypes of custom designs within 72 hours ARO. The engineering and design process is completely automated. A specified part number is translated by computer directly into complete production specifications, including settings of automated trim and test equipment. Errors and delays associated with hand-design are completely eliminated.

RELIABILITY is built into the fully encapsulated package which features silicon integrated circuits and thick-film hybrid construction. Amplifiers are short-circuit protected and "latch-up" proof.

PRODUCT DEPTH is your assurance of full flexibility, since Genisco markets a complete line of both active and passive wave filters. Complementing this is a varied array of signal and power type EMI/RFI filters, Mini-Filters®, and signal and power transformers and coils — all backed by one of the industries best-qualified EMI/RFI consulting engineering laboratories.

description

Genisco STATE VARIABLE active filters are general-purpose, completely self-contained, active networks capable of stable and efficient operation over the frequency range from 20 Hz to 10 KHz. Active elements are state-of-the-art monolithic-chip operational amplifiers bonded to a thick-film hybrid circuit which is permanently encapsulated. Each circuit has one high impedance input and three low impedance outputs corresponding to the lowpass, bandpass, and highpass filter functions. The multiple negative feedback paths of the active circuit and the high gain amplifiers provide stable and repeatable frequency characteristics and minimum DC drift with time and temperature.

Low cost and rapid delivery are possible, since all filters are built from the same basic component which is factory-trimmed, under computer direction, to a specific customer requirement. Filters may be ordered as either the basic 2-pole module with prescribed fo and Q values or as a complete 2, 4, 6, or 8-pole active filter with a Chebyshev, Butterworth, or Bessel type response.

features

- Completely pre-tuned . . . ready to use
- Fast delivery with computer-directed pro duction
- Compact, convenient 14-pin, dual-in-lin package
- State-of-the-art hybrid microcircuit desig
- Stable multiloop negative feedback circu
- Frequency range 20 Hz to 10 KHz standar

HERTZ FILTERS

BAND PASS FILTERS CUSTOM DESIGNED TO FILL YOUR NEEDS

rtz Filter Corporations' engineering partment is made up entirely of specialist in the field of custom design of band pass filters. They are all fully experienced and prepared to help you solve your filter problems. Call or write Hertz for reable service and prompt delivery.

EATURES

- Filrs, Band Pass, Passive
- Ce er Frequencies — 50 Hz to 50 Meg Hz
- Sh e factors — better than 2.0 for ratios of 60db to 3 db
- Bdwidth to center frequency ratio — up to 0%
- Pse linearity — within 10° through passband
- L passband insertion loss
- Bter than 80 db attenuation 50% above and below center frequency
- Input and output impedances as required
- L input and output impedances in stop band
- L passband ripple
- L, and R elements only

OWER FILTERS

Kin6 Pr Line Filters are designed, built and tested to deliver maximum hte-fr continuous service year-after-year. Available as individual power ns, or used in cabinet assemblies, these units are intended for use shield enclosures, secure installation and general power applications. r are ilable in various current ratings from 1 AMP through 200 AMPS.

60 Ser

1960 ries filters furnish 100 DB of attenion fr 14KHZ to 10GHZ when measured accor ce with Mil Standard 220A load ditions

800 Ses

1260 eries filters furnish 100 DB of attenion fr 14KHZ to 10GHZ when measured accor ce with Mil Standard 220A. Also asured der full load conditions from 14KHZ 20MHZ ith special buffer networks to allow d me rements below 100KHZ.

76 Se s and 1620 Series

ters a also available in single and dual cuit s offering lower performance charteristi when required.

F SIELDED & FILTERED IRCIT BREAKER PANELBOARD

pkin F Shielded and Filtered C/B Panelerds intended for use in installations ere ure communication is mandatory. e unic design of these Panelboards mainins iding integrity with the cabinet or op Designs are available utilizing both 196 eries and 12600 Series filters. Cirit Br er Complement must be specified en ring.

COMMUNICATIONS/ SIGNAL LINE FILTERS

258B-S2

This unit is a Voice and Signal Line Filter offering 100 DB attenuation from 14KHZ to 1GHZ per Mil Standard 220A with outstanding reliability. Originally designed for use in 600 OHM balance system, it has been widely used in other applications such as Secure Communications.

F-4386 & F-4386-1

These Voice and Signal Filters are designed to meet the requirements of DCA Cir 175-6A Application #1. They are single circuit bulkhead mounting tubular filters intended for cabinet installation.

Special cabinet designs are available incorporating any number of the above filters modified for cabinet installation. These units are constructed with an R-F Shielded bulkhead between input and output housings in order to maintain shielding integrity required for secure installations.

UL RECOGNIZED FILTERS FOR DATA PROCESSING EQUIPMENT

The 44 Hopkins RFI Filters designed expressly for data processing equipment provide maximum suppression of Radio Frequency Interference and other extraneous signals detrimental to efficient operation of data processing equipment.

Hopkins RFI Filters are designed and tested to deliver maximum, trouble-free duty for many years.

You will speed production and save both time and money in the manufacture of your data processing equipment when you specify, whenever possible, off-the-shelf Hopkins RFI Filters which are included as recognized components.

The Hopkins line offers the widest selection of RFI filters recognized under the component program of Underwriters' Laboratories, Inc.

U.L. Yellow Card listings available upon request. Available in various amperage ratings and case styles.

CUSTOM AND GENERAL PURPOSE EMI/RFI FILTERS

Custom Filters

pkin as long been a leader in the design d dev pment of special custom filters to tisfy ecific customer requirements. Thouds designs are on file incorporating all ltage urrent ratings and case configurans. Sign and performance are verified by mput Our complete Engineering and Manactur Facility is available to assist in the lution f your particular filter problems.

General Purpose Tubular Filters—14000 Series

Intended for use in critical applications where the "feed-thru" characteristic is necessary for good high frequency performance. Available in various circuit configurations from a single element capacitor thru multiple element Pi and T sections. Various performance characteristics are available to allow the user to select the unit best suited to his needs. Typical ratings from 50VDC @ 1 Amp. to 277 VAC @ 50 Amp.

All units designed to meet requirements of MIL-F-15733.

These Units are available mounted in cabinets on special request. Contact Factory.

General Purpose Rectangular Filters—16000 Series

These units are intended to be used where installation is not critical. They are available in one, two and three circuit configuration as well as a wide variety of voltage and current ratings. Various attenuation characteristics allow the user to select the unit best suited to fit his particular needs. Typical ratings are from 50 VDC @ 1 Amp. to 277 VAC @ 50 Amp. All units are designed to meet the requirements of MIL-F-15733.

Electronic Wave Filters utilizing modern network design techniques are available as custom filters upon request.

SPECIAL CHOKES

BAND PASS/WAVE FILTERS

When you want high efficiency delay lines specify Kappa Super-η*

*SUPER-η LINES embody a new design principle providing the highest efficiency yet obtainable in lumped constant delay lines. Use of network synthesis techniques rather than conventional m-derived methods results in sharply improved delay line efficiency. Compared to ordinary lines of any given delay, KAPPA SUPER-η lines provide linear performance over a much greater band width. In addition these newly developed lines offer such outstanding advantages as: greater inherent reliability, smaller package size, and appreciable cost reduction.

SUPER-η LINES FOR VIDEO SYSTEMS

Impedance:	75 ohms (unless otherwise specified)
Amplitude Response:	better than 0.1 db. flatness to 10 MHZ or higher
Ripple:	within ± .05 db to 10 MHZ or higher
Group Delay:	linear within ± 1% or ± 1 nsec, whichever is greater.
Group Delay Ripple:	within ± 2½% to 14 MHZ
K factor:	better than .25% for T or 2T sin² pulse for both American and European systems
Cross talk:	less than 46 db.

UPDATE YOUR VIDEO BROADCAST EQUIPMENT WITH KAPPA SUPER-η DELAY LINES!

Specify KAPPA for the most complete line of electro-magnetic delay lines..

STANDARD LUMPED CONSTANT DELAY LINES SERIES LC

Delay: 50 Nanoseconds to 1 second
Bandwidth: DC to 250 MHZ
Rise Time: As low as 2 Nanoseconds
Impedance: 25 ohms to 50 K ohms

TRANSPONDER LINES SERIES C

Tap Spacing: 1.45 μsec., or as required
Tap Tolerance: ± .05, or as required
Delay-to-Rise-Time Ratio: 100 max.
Temperature Stability: 50 ppm °C or less

LOW DISTORTION LINES SERIES D

Distortion at Output: 2% max.
Distortion at Taps: Less than 5% at any tap
Distortion Limit: As low as 0.1% if required
Delay Range: up to 100 usec.

PRECISION AUDIO DELAY LINES SERIES A

Delay Range: from 500 μsec to 1 sec.
Bandwidth: 70 KHZ (max.)
Delay Linearity: nominally within ± 0.2 available to within ± 0.0

PRECISION DECADE DELAY UNITS SERIES DK

Variable delays available between input and output terminals in decade steps. Each decade has eleven (11) switch contacts and ten (10) delay increments so that the dial values overlap.

ULTRA MINIATURE DELAY LINES SERIES T

Delay Range: to 200 nsec.
Delay/Rise Time: 10 max.
Attenuation: .2 db max.
Fully encapsulated

STANDARD DISTRIBUTED CONSTANT DELAY LINES SERIES DC

Delay Range: to 3 μsec.
Standard Tolerance: ± 5% on Delay
Delay-to-Rise-Time Ratio: 11 max.
Distortion: ± 5% (typical), ± 10% max.

DELAY TRIMMERS: TINY TRIM® SERIES

Size: ¼ Cubic In

STANDARD FILTERS

FOR HIGHEST SELECTIVITY

Standard filters are designed by modern network methods for minimum stop to pass band ratios. Applications are those requiring optimum utilization of frequency spectrum.

CUSTOM FILTERS

Low, band or high pass and band stop filters with optimum characteristics can be supplied to your special requirements and MIL-F-18327. Construction utilizes toroidal inductors and high quality capacitors of special films or silvered mica, according to frequency and space requirements. Operating frequencies range to 10 mc/s. Temperature stabilization for both amplitude and frequency can be effected. Mechanical styles may be epoxy encapsulated or hermetically sealed steel sizes from 0.2 to 200 cu. in.

Gould®/Clevite Quartz and Ceramic filters

...Small, lightweight and rugged. Steep-sided selectivity. Wide range of bandwidths. Non-microphonic. Permanently tuned and immune to magnetic fields. Gould filters are highly stable with temperature and time. These high quality filters are backed by 10 years of design and manufacturing experience.

The filters described here were developed to meet the diverse requirements of electronic equipment manufacturers. Their wide range of performance characteristics and prices yields a filter for almost every application. Such breadth of line simplifies the designer's selection of an optimal filter at minimal cost. These are a few of the reasons that Gould's growing family of Quartz and Ceramic filters have replaced LC, active and mechanical filters in a broad range of military, commercial and consumer equipment.

We can customize Gould filters to your special requirements. Our engineers, salesmen and representatives can answer your specific questions.

Quartz filters

Uni-Wafer® Coupled Mode Quartz Filters — for IC's and Higher IF's

Gould miniature monolithic quartz coupled mode filters combine high stop band rejection, low insertion loss and excellent stability with the advantages of small unit size and weight. Available in standard off-the-shelf models, two-, four-, and six-pole, these filters are completely compatible with both conventional and integrated circuitry. They are suitable for MIL spec quality VHF or UHF communications receivers and have the reliability required for telemetry, radar and aerospace systems.

The Uni-Wafer design is a proprietary Gould development using the principle of "trapped energy" to confine and maximize resonant energy within the region of each electrode pair. The result: lower insertion loss, steeper skirt ratios, greater spurious mode rejection and a smaller package. High performance filters from 5MHz to 75MHz center frequencies can be computer designed to your specifications.

Coupled Mode Quartz Uni-Wafer Filters Avai ble for Immediate Delivery

Number Model	Center Frequency (MHz)	Bandwidth 3dB (Min.) (kHz)	Bandwidth 60dB (Max.) (kHz)	Spurious Mode Rej. (dB)
Two Pole				
CM9B55-10.7	10.7±1kHz	9	55*	25
CM30B180-10.7	10.7±1kHz	30	180*	20
Four Pole

r mo information, write for Bulletin 94030.

CF lter — just right for two-way radio

e "T" combines the advantages of a ned ansformer with the stability and gh p formance of a ceramic filter. This sign ffers greater selectivity at lowest st. ide specifically for CB, mobile rcra and marine radios in a package ss t n 0.6 cubic in. High impedance upli with low insertion loss and good ape ctors.

r h quality AM and FM receiving equipment, they pro- de a maller package and greater selectivity than conven- onal C filters and are competitive in cost.

TCF CERAMIC FILTERS

Model Number	Bandwidth 6dB (Min.) (kHz)	Bandwidth 60dB (Max.) (kHz)	Insertion Loss (dB)	Stopband Rejection (dB)	Impedance (Kliohms) In**	Impedance (Kliohms) Out

TCF6-12F36A	12	36***	10	99	40	2.2

Center Frequency 455kHz. Available on special order at 500kHz.
Stability: TIME — within +0.2% for 5 years.
TEMP — within 0.2% from −20 to +60°C.
Max. Ratings: 100 volts DC, 5 ma DC, *@90dB.
Prices: $6.00 to $12.00, depending on specfications, in lots of 500.
For more information, write for Bulletin 94026.

FM 4 Filter—rugged, high selectivity, miniature for Hi-Fidelity FM's

This 10.7MHz FM 4 filter, a simple monobloc of high-Q ceramic molded in epoxy, combines small size and distortion-free performance with high selectivity and economy both in component cost and cost of circuit manufacture. Fully compatible with conventional of integrated circuitry, it permits design of straightforward filtering circuits with fewer interconnections. Immune to shock, lightweight, with internal circuit integrity, thermally insulated and more . . . this filter is gaining increasing acceptance with mobile FM receiver designers.

	Center Frequency* MHz	Bandwidth 3dB (kHz)	Bandwidth 40dB (kHz)	Insertion Loss dB	Stopband dB	Ripple dB
Typical	10.7*	235	825	3.5	47	0.2
Guaranteed	10.7*	200 min. 280 max.	900 max.	5 max.	40 min.	1 max.

*Production sorting delivers five groupings of center frequencies within 100 kHz of nominal 10.7 MHz, each with a tolerance of ± 25 kHz. Color dot coded as follows:

Cf	MHz	10.625	10.6625	10.700	10.7375	10.775
Dot	Color	Orange	Yellow	Green	Blue	Violet

Impedance 330 ohms ± 10% plus 5 pF ± 5
Price: $0.60 in lots of 1000.
For more information, write for Bulletin 94033.

"IR" Identical Resonator — low-cost alternative to LC filters and IF cans.

"IR" single fixed-tuned ceramic resonators enable the manufacturer to build his own 455 kHz IF stage filters to his own specifications, simply, and at the lowest possible cost. The interconnection of two or more of these "IR's" with off-the-shelf capacitors produce a high performance filter which will exactly meet your requirements. Design tables, available on request.

6dB bandwidths 2 kHz to 24 kHz
Center frequency 455 kHz
Shape factors 5:1 to 2:1
Stopband rejection 20 dB to 105 dB

Compared with conventional LC filters or IF cans, the identical resonator approach offers flexibility, design simplicity, and significant savings.

Price: $0.35 in lots of 500.
For more information, write for Bulletin 94031.

Gould sales engineers and design personnel can help you with your specific filter problems, or if you'd like, write for complete technical data and information. Piezoelectric Division, Gould Inc., 232 Forbes Road, Bedford, Ohio 44146.

GOULD CLEVITE

Gulton

TEMPERATURE STABLE BROAD BAND FILTERS

LOW PASS

Gulton TEMPERATURE STABLE broad band filter line offers 50 VDC, 100 VDC, 150 VDC, 185 VDC, 250 VDC, 300 VDC, 125 VAC and 185 VAC ratings in L, Pi and T networks. The TEMPERATURE STABLE line features:

- Guaranteed minimum insertion loss with full load applied from -55°C to +125°C
- No voltage derating to +125°C
- Low DC resistance

Contact Gulton for data on the above voltage rated L, Pi and T network broad band filters. Gulton has the most comprehensive line of broad band filters. Write for catalog.

Gulton

EMI BROAD BAND LOW PASS FILTERS

SUBMINIATURE AND MINIATURE

Gulton offers the widest range of broad band low pass filters on the market today...subminiature BUTTON series, miniature TEMPERATURE STABLE series and standard broad band series. They are available in 50 VDC to 300 VDC, 125 VAC and 185 VAC voltage ratings and 60 ma. to 15 amp. current ratings. Note...BUTTON series...the smallest broad band filters. Gulton has the most comprehensive line of broad band filters. Call Gulton to solve your EMI problems.

HOW KAPPA GETS CONSTANT DELAY IN *STEEP RESPONSE* FILTERS!

AMPLITUDE RESPONSE IN PASSBAND

PASSBAND GROUP DELAY DISTORTION

Difficult? . . . of course! . . . but
WE PROGRAMMED A GENERAL SOLUTION
in double precision **FOR** a high-speed digital computer,
to enable us to meet the demands of systems
requiring delay distortionless transmission.
ANY PREDETERMINED ENVELOPE DELAY
can now be attained
BY ITERATION OF THE POLES AND ZEROES
of a complete system with up to 50 equalizer sections.
By **ACHIEVING EQUAL RIPPLE RESPONSE** this
method outperforms any other equalization technique in minimizing
delay distortion. KAPPA design engineers
can assist you in attaining **ECONOMICALLY** an improved accuracy of
time correlation between signals in data transmission systems.

KAPPA 2211 SERIES FILTERS

(TYPE: BAND PASS)

PASS BAND RESPONSE:	
Frequency Range:	3300-6000 Hz (1 db points)
Amplitude ripple:	± 0.25 db.
Group Delay Distortion:	Less than ± 100 usec.
Insertion Loss at 4500 Hz:	Less than 2.5 db
STOP BAND RESPONSE:	Min 50 db at 3000 Hz and lower Min 50 db at 6420 Hz and higher
Impedance Range:	500-6000 ohms
Pass Band Harmonic Distortion:	Less than −65 db
Intermodulation Distortion between equal simultaneous level tones:	55 db below −10 dbm
Environmental:	MIL F-18237 B

KROHN-HITE CORPORATION

OSCILLATORS / FILTERS / AC POWER SOURCES / AMPLIFIERS

BRAMCO FILTERS LC & ELECTROMECHANICAL, 0-50 MHz

A. Tone Telegraph Bandpass Receive Filter
(MIL-F-18327/7)
Insertion loss: less than 8 db in the pass band
fc: 425 to 3825 Hz in 170 Hz increments
Transformer isolation between input and output
Size: 4 15/16" x 2 9/16" x 2 9/16"

B. Tone Accessory Band Stop Filter
For use with 600 ohm source and load
Typical insertion loss: 3 db, 20 Hz to 1.43 kHz
60 db, 1.58 kHz to 1.9 kHz
3 db, 2.1 kHz to 20 kHz
Size: 9" x 4½" x 1¼"

C. Tone Telegraph Bandpass Transmit Filter
(Mil-F-18327/7)
Specifications same as receive filter (A) except insertion loss less than 5 db in the passband
Size: 2 15/16" x 2 1/16" x 2 9/16"

D. RF20
Contactless Resonant Reed Filter, 80 to 3000 Hz
Works as audio tone filter or stable frequency source (±0.15%) for audio tone generator. See Section 2300 for more details.

E. Tone Accessory Low Pass Filter
For use with 600 ohm source and load
Typical insertion loss: less than 3 db, 20 Hz to 3 kHz
greater than 60 db, 3.45 kHz to 20 kHz
Size: 4" x 3¼" x 1¼"

F. Dual Hipass - Lowpass Filter
Insertion loss, lowpass section: less than 1 db, 20 Hz to 400 Hz
less than 3 db, 400 Hz to 4 kHz
greater than 40 db, 9.5 kHz to 20 kHz
Insertion loss, highpass section: less than 1 db, 9 kHz to 20 kHz
greater than 40 db, 20 Hz to 4 kHz
Operating Temperature: −40 to +85°C
Size: ⅝" x 2¼" x 3¾"

G. EIA Land Mobile Low Pass Voice Filter
1000 ohms source and load impedance
Insertion loss: less than 2 db in passband
greater than 10 db at 4.4 kHz
greater than 30 db at 9.5 kHz and above
Operating Temperature: −30 to +60°C
(EIA Shock and Vibration specs)
Size: ¾" x ⅝" x 1¼"

H. Tone Telegraph Bandpass Receive Filter
fc: 420 Hz to 3180 Hz in 120 Hz increments
Insertion loss: typically 6 to 10 db in the passband
Size: 3¼ x 2¼" x 1¼"

J. Radio Receiver Low Pass Filter
(Mil-F-18327/14, Type FR60X11YY1)
Insertion loss: less than 1 db from 200 Hz to 3 kHz
less than 3 db at 3.5 kHz
greater than 20 db at 3.5 kHz
greater than 45 db from 4.5 kHz to 20 kHz
Operating Temperature: −55°C to +85°C
Size: 2¾" x 1 29/32" x 31/32"

At Bramco the emphasis is in custom engineering LC and electromechanical filters.

We offer broad experience, fast engineering response. Know how to squeeze into tight spots, odd shapes. Use computer synthesis program for optimum design. Build to Mil-F-18327 or commercial specs.

Write for helpful data sheets, or outline application requirements. We'll welcome the chance to work with you. See section 2300 for other Bramco frequency products.

LEDEX

BRAMCO CONTROLS DIVISION, LEDEX INC.
550 South College Street, Piqua, Ohio 45356 • phone (513) 773-8271

active filters

variable and fixed .0001Hz to 2MHz

This extensive line of active filters is computer-designed for optimum performance and versatility. All variable units have individual channels operable as either Low Pass or High Pass filters. The interconnection of independent channels gives Band Pass, Band Reject or steeper attenuation slopes.

Selectable T/D response enables altering filter performance from frequency domain (Butterworth) to Time Domain for optimum transient (pulse) behavior. All instruments have rack mounts available and are stocked for quick delivery.

Series AF-700
Selectable slopes (6, 12, 18 or 24db/octave); tunable spikes & notches each channel. Outstanding versatility for systems or general laboratory use. 115/230 VAC or battery operation.

Series AF-500A
0.2Hz to 20KHz; Push Button Digital Tuning. High performance in a low cost package. Simple keyboard operation. Ideal for laboratory or production use.

RF INTERONICS

100 Pine Aire Drive • Bay Shore, Long Island, N.Y. 11706
516 231-6400 • TWX 510 227-6233

A Division of KDI Navcor, Inc.

Now more than ever the nation's leading producer of RFI/EMC filters and capacito

Over a period of many years, the engineering and production teams at RF Interonics have built a reputation for unsurpassed technical competence, quick-reaction capability, and proven, reliable performance. The nex RFI is a problem to you, call RF Interonics. Your i will receive a prompt and meaningful response.

RF Interonics Parts on QPL of MIL-F-15733

The types listed below are representative of thousands of standard and custom-engineered filter units and assemblies described in our catalog. With extensive inventories of off-the-shelf filters, RF Interonics stands ready to offer fast delivery and expert engineering service to meet your exacting RFI/EMC filter requirements.

Cylindrical Filters, Per MIL-F-15733

Style FL 22 ..... 100 VDC ..... 1 to 30 Amps
Style FL 24 ..... 400 VDC ..... 1 to 55 Amps

Rectangular Filters, Per MIL-F-15733

Style FL 51, FL 56 ..... 100 VDC ..... 1 to 55 Amps
Style FL 53, FL 57 ..... 125 VAC, 400 VDC ..... 1 to 55 Amps
Style FL 54, FL 58 ..... 250 VAC, 600 VDC ..... 1 to 55 Amps

L & PI Circuit Cylindrical Filters, RF700 Series

(A Standard of the Industry for more than 9 years)
100 VDC, 115 & 250 VAC ..... 0.5 to 50 Amps
Insertion loss: 40 db @ 150 KHz, to 80 db @ 150 KHz

Feed-Thru Capacitors—MIL-C-11693 Performance

Standard and custom-engineered types, subminiature to high-current units, 0.047 to 10 MFD.

PI, T & L-Circuit Subminiature Cylindrical Filters

50 & 100 VDC, 115 VAC . . . Up to 10 Amps . . . High Insertion Loss

Multiple-Circuit Assemblies

115 VAC (Line-to-Ground) ..... 3 to 50 Amps per circuit

Shielded Room Filters

Single, Dual, Triple & Four-Circuit assemblies, with a variety of configurations and performance characteristics. Completely welded assemblies for maximum reliability.

Up to 450 VAC . . . 25 to 200 Amps (Special designs to 2000 Amps)

Power Factor Correction Inductors

For the elimination of loading effects of high-capacitance filters on limited-current power sources.

Signal & Telephone Circuit Filters

A wide variety of standard and custom-engineered filters for use in communications and data lines requiring compliance with sophisticated emission control specifications.

Subminiature Ceramic Types. We were one of th Three basic lines to choose from: 50 VDC, 100 and 115 VAC.

A Variety of Much Bigger Ones, Too. Thousan proven types available, as standard or custom-g neered assemblies. Ratings from 1 milliamp to 2 amps, from 0.1 volt to 20,000 volts, from fractio an ounce to more than 1,000 lbs.!

The Most Modern Facility of its Type in the Coun Our plant is industrially engineered for the effic manufacture of high-reliability radio frequency fil and capacitors. It is fully air conditioned and humi controlled. Clean rooms are maintained for capac winding and assembly of space-quality filters. A co plete in-house capability includes sheet metal fabri tion, inductor winding, vacuum impregnation and necessary processing and test equipment to ass adequate control and quick-reaction time.

ROCKLAND

Analog and Digital Signal Processing Instrumentation

PERATIONAL* FILTER — SERIES 1000

ariable-order filter, provides high-pass, low-pass, band-pass, or band reject characteristics and up to 40 db gain; also functions as sinusoidal oscillator.

HI/LO* FILTER — MODEL 1020F

Provides fourth-order (24 db/oct) high-pass, low-pass characteristic, and 0 or 10 db passband gain. Two units are required for band-pass or band-reject response.

DUAL HI/LO* FILTER — MODELS 1022F, 1042F

Two dependent channels in one instrument offer low-pass, high-pass, band-pass and band reject characteristics with attenuation slopes from 24 db/oct up to 96 db/oct and up to 40 db passband gain.

PROGRAMMABLE DUAL HI/LO FILTER SERIES 1500

Intended for automatic systems applications, this series includes models with Local and Remote or Remote only programming. These instruments may be controlled by computer, punched cards, tape or contact closures.

PROGRAMMER — MODEL 1600

Provides pushbutton selection of 10 different 46-bit programs for controlling programmable instruments, such as the Series 1500 Filters, counters, DVM's, synthesizers et al. Price range: $650 to $[illegible] depending on options.

*Trademark

FEATURES:

1. Digital Frequency Selection.
2. ±2% Cutoff Frequency Accuracy across the entire tuning range.
3. Cutoff Frequency Temperature Coefficient of ±200 ppm/°C, max.
4. Butterworth (maximally flat) and RC (transient-free) response.
5. 10 Meg input impedance (except Series 1000: 2 Meg) and 50 ohm output impedance.
6. 115/230 Vac or external battery operation (except Programmable Series: AC only).
7. Bench/Rack Convertible Cabinet. Tilt stand and rack adaptors included.

DIGITAL FILTERS SERIES 4000

- Versatile digital processing of analog or digital signals (band-pass, band-reject, all-pass, comb filtering, correlation, spectral analysis, signal synthesis etc.)
- Multichannel Capability — up to 50 channels at 10 KHz sampling rate.
- Arbitrary accuracy (16 and 24 bits standard).
- Programmable or fixed characteristics.

OUR ENGINEERING DEPARTMENT WELOMES A DISCUSSION OF YOUR FILTER & EQUALIZER PROBLEMS

Advanced Computer Programming with an extensive computer facility plus a tremendous library of normalized designs added to the finest engineering capability in the industry enables SEG to react to your needs with amazing speed and to MIL Spec.

We have extensive experience in meeting your ne for such applications as: Telemetry, Over and unde sh control, aliasing, FSK, data-handling, time-domai s thesis, tunable characteristics, group delay, pha intercept control.

PROBLEMS SOLVED FOR: MINIATURIZATION, ANTENNA MATCHING, RINGING, DCA Specs, PULSE COMPRESSION & EXPA, FREQUENCY SWITCHING

HUM & NOISE	80 dB below 1 volt (100 μv)	80 μv or less	100 μV 0.2-2 MHz high-pass < 50 μV all other ranges
PRICE	$980.00	$1,475.00	364 Filter $950.00 ea. section 381 Power Supply $550.00 with 391 Frame

WIDE-BAND VHF (40-220 MHz) AMPLIFIER

MODEL 222B

Distributed amplifier covering complete VFH TV and FM bands. Low cross-modulation permits simultaneous amplification of 12 or more TV channels. Choice of two slopes or flat response: Bandwidth, 40-216 MHz; Frequency Response, 3.5 or 6.5 dB, sloped; flat with SKL 200-22 Equalizer; Voltage Gain, 25 dB minimum at 216 MHz; Impedance, 75 ohms, input and output; Return Loss, 20 dB minimum, input and output; Noise Figure, 13 dB maximum, at 216 MHz.

PRICE $280.00 to $350.00 dependent on quantity ordered.

MODEL 503A

Ideal for testing the transient response of wide-band systems in radar, communications and nuclear research. Rise Time, 0.5 nsec; Pulse Width, 0.6-10 nsec. int., unrestricted with ext. network; PRR, 50-120 pps; Impedance, 50 ohms; Trigger Input, 10V p-p; Pulse Amplitude, 0-150 int.; 1000V with ext. supply.

PRICE $495.00

FAST RISE PULSE GENERATOR

RISE TIME 0.5 NANOSEC. PULSE AMPLITUDE TO 1000 V.

SKL also manufactures a complete line of transistorized cable television equipment, featuring double pilot equalization. For complete specifications, write:

K31A	4KHz	100KHz	$\pm15\%F_c$	40db at $.5F_c$ & $2F_c$	500	10K	500	10K	3	$45

The bandwidth for any of the above filters can be increased or decreased to specification.

WIDE BAND FILTERS: Bandwidths of ±16% or greater can be obtained by ordering TT standard High pass and Low pass filter sections as a composite network. Select numbers from the Series H and J listings on the next page which give the desired attenuation slopes and combine these numbers. For example to obtain a slope of 40db at 0.65 of the lower freq. cut-off, F_{c1}, (High pass section) and 40db at 1.6 of the upper freq. cut-off, F_{c2}, (Low pass section) use H69A and J59A. Specify the two as K6959. **The high pass series number is first, followed by the low pass number.** Types with dissymmetrical attenuation slopes can be combined. Also specify the three db down cut-off frequencies F_{c1} and F_{c2} and impedance. The price is the sum of the HP and LP section prices.

Telemetering: Refer to series K20, K21A, K30 or K31A. TO ORDER specify IRIG Channel number or letter, source and load impedances.

TO ORDER BANDPASS FILTERS — Specify (1) TT Series No., (2) minus 3db frequencies, (3) source impedance, (4) load impedance.

SPECIALS are available for center frequencies from 10Hz upward and 40db/3db bandwidth ratios as sharp as 1.2:1.

TO ORDER Specials, specify (5) bandwidth and (6) stop band attenuation required in addition to the above data. Terminations are regarded as resistive unless otherwise specified.

BAND REJECT STANDARD FILTERS FOR ANY CENTER FREQUENCY FROM 10Hz TO 100KHz

Series	F_c, Center Freq. Range Min.	Max.	Bandwidth −3db	Attenuation	Impedance Min.	Ohms Max.	Circuit	Case No.	Approx. Price
B83	10Hz	100KHz	$.77F_c$ & $1.3F_c$	50 db Notch	600	1 Meg.	L-C	4	$30
D	10Hz	100KHz	$.25F_c$ & $4\ F_c$	40 db Notch	SEE ORDERING INSTRUCTIONS BELOW		Twin-T	2	$11
E	10Hz.	100KHz	$.25F_c$ & $4\ F_c$	56 db Notch			Twin-T	2	$17
F	10Hz	100KHz	$.25F_c$ & $4\ F_c$	60 db Notch			Twin-T	2	$27
R20	100Hz	3999Hz	3db Bandwidth to 40db		10K	50K	L-C	4	$35
R30	4KHz	100KHz	Bandwidth Ratio = 5 or less		1K	10K	L-C	4	$35

TO ORDER REJECT FILTERS — Specify (1) TT Series No. or Letter, (2) center frequency, (3) source impedance, (4) load impedance. For Series R20 and R30 specify 40db bandwidth. Twin-T prices and cases apply to all filters using capacitor values from 0.1 MFD to 500 MMFD. $C = 1/8.85\ F_{HZ}\ (R_{source}\ R_{load})^{1/2}$. C is in farads, Filters with null frequencies as low as 1 Hz are available. Series E and Series F networks are available with octal plug-in bases. loads up to 10 megohms can be used with B83 filters at increased insertion loss. Low freq. B83 filters require 10K or higher loads for specified response. Prices are higher for some low frequency - low impedance or high impedance types. Multi-notch units are available. Terminations are regarded as resistive unless otherwise specified.

FILTERS

Texscan Microwave Products' standard line includes tubular bandpass and lowpass filters ranging in size from 3/16 to 1-1/4 inches which operate within the frequency range of 10 MHz to 13 GHz, and tunable bandpass filters which cover the frequency range of 48 MHz to 4 GHz.

a complete line...a single sourc

BANDPASS

BB Series
70 MHz to 5 GHz
3/8 inch diameter

A subminiature, fixed, bandpass, filter, ⅜ inch diameter, which has features similar to the BA series plus the additional advantages of lower frequency coverage, lower insertion loss, higher power rating and adaptability for most connector types.

BC Series
50 MHz to 4 GHz
1/2 inch diameter

A low priced, fixed, bandpass, filter, ½ inch diameter, with frequency coverage from 50 MHz to 4 GHz. This series is ideal in meeting low loss and medium power applications for prototype or production use. Delivery can be made in less than 48 hours. Many optional features are available to increase the flexibility of this series.

BD Series
25 MHz to 2 GHz
3/4 inch diameter

A medium power, fixed, bandpass, filter, ¾ inch diameter, which features low insertion loss and low frequency coverage. It is constructed in part aluminum and can accept all connector types.

BE Series
10 MHz to 1 GHz
1-1/4 inches diameter

This high power, fixed, bandpass, filter series has the lowest insertion loss of all the bandpass series. It is 1¼ inches in diameter and is ideal for receiver and transmitter applications where insertion loss of 0.1 db is desirable and selectivity is of major importance.

MULTIBAND
MBF Series 48 MHz to 2 GHz

Tunable bandpass filters covering the frequency range of 48 MHz to 2 GHz. Two or three tunable filters are packaged as one unit to enable the user to have continuous frequency coverage.

LOWPA

LB Series
100 MHz to 5 GHz
3/8 inch diameter

A subminiature, fixed, lowpass, filter, ⅜ inch diameter, which has features similar to LA series plus the additional advantages of lower frequency coverage, lower insertion loss, higher power rating and adaptability for most connector types.

LC Series
40 MHz to 4 GHz
1/2 inch diameter

A low priced, fixed, lowpass, filter, ½ inch diameter, with frequency coverage from 40 MHz to 4 GHz. This line is most competitive for higher prototype or production requirements. Delivery can be made in less than 48 hours. Many optional features are available to increase the flexibility of this series.

LD Series
25 MHz to 2 GHz
3/4 inch diameter

A medium power, fixed, lowpass, filter, ¾ inch diameter, which features low insertion loss and low frequency coverage. It is constructed of aluminum and can accept all connector types.

LE Series
10 MHz to 1 GHz
1-1/4 inches diameter

This high power, fixed, lowpass filter series has the lowest insertion loss and lowest cutoff frequency of the lowpass series. It is 1¼ inches in diameter and is constructed of aluminum

TUNABLE

VF Series 48 MHz to 4 GHz

Tunable bandpass filters covering the frequency range of 48 MHz to 4 GHz with any single model covering more than an octave. These units are available with either a three or five section response and have a 3 db bandwidth of 5%. Several options are available to increase the flexibility of this series.

EST SOURCE FOR YOUR CUSTOM FILTER REQUIREMENTS BECAUSE WE THE BEST FACILITIES FOR:

DESIGN

PRODUCTION

TEST

extensive file of analysis synthesis software and access to either G.E. 415, G. 420, or CDC 6400 processors assures a fast accurate response from engeering staff.

We have developed an in house capability to build most of the components used in our filters . . . (Inductors, capacitors, crystals, transformers) all of which gives us better control and more flexibility in filter production.

Our filter test instrumentation is the finest available in the frequency range up to 35 MHZ thus minimizing your risk in costly test correlation problems and rejected shipments. Naturally, all of our products are tested 100% prior to shipment.

WE SPECIALIZE IN PASSIVE NETWORKS IN THE FREQUENCY RANGE FROM DC TO 35 MHZ FOR:

DATAMODEMS

TELECOMMUNICATIONS

AVIONICS

TELEGRAPH

INSTRUMENTATION

TELEMETRY

BAND PASS
BAND REJECT
LOW PASS
HIGH PASS
LINEAR PHASE
PHASE EQUALIZER
AMPLITUDE EQUALIZER
DELAY LINES
FSK
SINGLE SIDEBAND

WE ALSO SPECIALIZE IN PACKAGING TO MEET YOUR REQUIREMENTS

Control filters and networks can be supplied in several basic configurations with any desired mounting and termination provisions. You may want to consider:

- Epoxy encapsulated or metal enclosed for pc board mounting.
- Metal enclosed or open pc board for card cage plug-in.
- Front panel plug-in.
- Chassis mount or chassis plug-in.

Call or write and let us know about your filter requirements. We also manufacture other frequency control devices—see separate listings in EEM Section 2300 for crystals, oscillators, etc.

EMI/RFI Filters

USCC

2000 Series — Miniature Filters

Here is the premier line of miniature EMI/RFI filters to eliminate conducted radio frequency interference on low voltage signal and power lines over the frequency range of 10 kHz to 10 GHz. A combination of high stability toroidal inductors and monolithic ceramic capacitors in a unique packaging concept provides units of unequalled performance. Filters available in voltage ratings of 50, 100, 200, 300 Vdc (115 Vac), and 400 Vdc (230 Vac) from .06 A to 10 A. Operating temperature range is —55°C to 125°C. Meets applicable portions of MIL-F-15733. Choice of Pi, L and T section units in a hermetically sealed case with .187" or .312" thread lengths.

5000 Series — General Purpose Filters

The requirements for general purpose filters for noise suppression in the intermediate levels of interference voltages are well covered by this filter series. Built for reliability and performance, they meet the applicable portions of MIL-F-15733. The tubular metal case, with a threaded neck, is designed to take advantage of bulkhead mounting for the highest shielding efficiency. Available in Pi, L and T sections for 200 Vdc, 400 Vdc/115 Vac and 600 Vdc/220 Vac from .5 A to 20 A. Higher current ratings may be obtained upon request.

5100 Series	40 dB at 150 kHz
5200 Series	60 dB at 150 kHz

3000 Series — Subminiature Filters

These feedthrough filters were developed to meet a genuine need for reliable subminiature units in EMI/RFI applications where size, weight and performance are critical. They are excellent for use in microwave, communication and airborne equipment applications. Packaged in screw thread cases, the series offers the maximum possible attenuation from 10 MHz to 10 GHz with an operating temperature range of —55°C to 125°C.

Series	Screw Case	Current (A)	Voltage (dc)	Attenuation
3200	8/32	10	100	50 dB at 200 MHz to 10 GHz, No load 45 dB at 200 MHz to 10 GHz, 2A load
3204-003	12/32	10	50	70 dB at 10 MHz to 10 GHz
3208	3/8-32	25	2500	50 dB at 100 MHz to 10 GHz
3211-003	5/16-24	25	100	70 dB at 10 MHz to 10 GHz

Special/Custom Filters

USCC offers the most comprehensive filter technology to solve perplexing problems across the entire EMI/RFI filter spectrum. When standard filter designs will not satisfy a specific requirement, our advanced assembly techniques utilizing ceramic or layer wound capacitors with toroidal coils give us the versatility to produce single or multi-circuit units to the most rigid standards. For immediate assistance, contact our filter engineers with your design problems.

EMI/RFI Filters

USCC

6000 Series — Signal Line/Communication Filters

This family of filters is offered with a variety of configurations and various attenuation characteristics for use in secure communication applications. They are especially valuable for preventing security breaches in telephone, signal, teletype, light and audio lines, communication rooms and computer facilities. Available in single, dual, and multi-circuit cabinet configurations.

6060-001 Series — Both ends shielded
6060-002 Series — Single end shielded
(for 600 ohm balanced lines)
A dual circuit filter for individual applications with attenuation of 100 dB from 14kHz to 10 GHz per MIL-STD-220A. Rated 300 Vac/600 Vdc at .5 A.

6060-003 Series — .5 A 300 Vac/600 Vdc
(for 600 ohm balanced lines)
Electrically identical to the 6060-001 Series but modified for cabinet installation. Uses a threaded neck for mounting through the internal bulkhead of a cabinet instead of a shielded end housing.

6065-001 Series — capacitive input at threaded end
6065-002 Series — inductive input at threaded end
(for 300 ohm telephone and signal lines)
These single circuit tubular filters, designed for cabinet installations, meet the requirements of DCA Circular 175-6A, Application #1. Provide attenuation of 60 dB at 14 kHz rising to 100 dB from 100 kHz to 1 GHz.

Power Line Filter Cabinet Assemblies

The 7630-CA and 7670-CA Series offer the same electrical parameters as the individual 7630 and 7670 filters but incorporate one or more filters mounted in an RF shielded NEMA enclosure. Individual filters are physically modified to facilitate cabinet installation. Available with 1, 2, 3, or 4 filters per cabinet. Neutral wire may be substituted for a filter. Have identical attenuation as the 7630 and 7670 Series. For 277 Vac and 440 Vac, 3-phase, 1 A to 200 A.

7000 Series — Power Line Filters

The 7000 Series is a line of high performance power line filters intended for use on secure communication installations and shielded enclosures. Available for 277 Vac and 440 Vac, 3-phase, from 1 A to 200 A for line frequencies up to 400 Hz.

7630 Series
Offering an attenuation of 100 dB from 100 kHz to 10 GHz, when measured in accordance with MIL-STD-220A under full load conditions.

7670 Series
Offering an attenuation of 100 dB from 14 kHz to 10 GHz, when measured in accordance with MIL-STD-220A, under full load conditions; from 14 kHz to 20 MHz, with special buffer networks for valid measurement below 100 kHz.

USCC Filters for Data Processing Equipment

Here is the USCC standard line of quality filters expressly designed for maximum suppression of EMI/RFI and other noises found in Data Processing Equipment. These units offer 60 dB of attenuation from 150 kHz to 1 GHz with a voltage rating of 120/240 Vac at 60 Hz. Current ratings are 1, 3, 5, 7, 10, 20, 30, and 50 A.

ELECTRIC WAVE FILTERS

Almost forty years of experience in the design and production of electric wave filters have resulted in UTC being a first source for top quality, reliability and advanced engineering . . . for both special and stock applications. Present designs incorporate a wide variety of core structures, winding methods, and capacitors to provide maximum performance. stability and reliability. Military (to MIL-F-18327C) and industrial types are available both metal cased and molded. Range of frequencies is from DC to 30 MHz.

dipstik™

HIGH DENSITY - SOLID STATE ELECTRONIC PACKING SYSTEMS

quick
easy
flexible

Up to 5 dual in-line assemblies (up to total) the cartridge.

CLAMP IN: The dual in-lines with the special clamp and spring assembly which holds them firmly in place.

SNAP IN: The loaded DipStik cartridge into the Dip-Stik receptacle and give the coupling screws a twist.

Vitally eliminated: Solder is not required in the DipStik system for mounting non-dual in-line discrete components where appropriate.

Circuit boards for mounting dual in-lines eliminated: DipStik eliminates the need for PC boards, connectors, associated hardware, sockets and extenders.

Test Point Capability: The DipStik system provides a test point each dual in-line lead through the use of terminals with eyelets in the DipStik cartridge.

Maintenance enhanced: Defective dual in-lines are easily replaced in the system simply by removing the cartridge assembly from the stack assembly, an operation which takes only a few seconds and can be accomplished with a minimum of equipment disassembly and handling.

Updating and Modification facilitated: Obsolete dual in-lines are replaced in the same manner as defective ones. Re-wire wrapping to meet design requirements is also relatively simple since the wire wrap terminals are easily accessible.

Increased protection for dual in-lines: The dual in-lines are protected from external objects by the DipStik which completely surrounds them. Damage from shock and vibration is also, thereby, minimized.

Versatility: 14 and 16 pin dual in-lines, as well as non discrete dual in-lines, may be mixed in the same DipStik.

Low insertion forces: Special straightening of dual in-line leads prior to insertion is unnecessary. The fragile dual in-line leads and internal bonds are protected during assembly since leads are not shoved into a socket or clearince holes in PC boards.

Ease of assembly and testing: No special tools are required for the assembly of dual in-lines into the DipStik. Terminals with eyelets for each dual in-line lead are provided in the cartridge which may be used both as test points and for the mounting of non-dual in-line discrete components.

Packaging density increased: The Dip-Stik system increases packaging density of dual in-lines as much as 100% over printed circuit mounting methods.

Complete packaging system capability: ACS Industries provides a standard line of mounting hardware and chassis specifically designed for the DipStik system.

ACS A PKL COMPANY — ACS INDUSTRIES, INC. • 13726 SATICOY STREET, VAN NUYS, CALIFORNIA 91402

INCORPORATED

LOOK TO A P for uniquely practical circuit design and test innovations.

Only A P offers complete flexibility in handling

DIP's
TO-5's
Discrete Components

Breadboarding simplified. No soldering, no alligator clips, no special patch cords with A P Terminal Strips and Breadboards.

Quick and easy assembly of both prototype and production circuits on A P OMNICARDS.

Immediate "in system" check of circuit modifications is possible with A P UNICARDS.

Ideal for lab and field testing. A P Test Clips and Digital Test Probes go everywhere.

A P products are available **off-the-shelf** from your nearest COMPAR distributor. Ask about quantity price breaks.

IC TEST CLIPS

For All Dual-in-Line Packages

- Offer full accessibility to DIP terminals
- Prevent possibility of shorting adjacent terminals
- Provide reliable wiping action contact
- Solve scope probe attachment problems
- Remove DIP's damage free

List price . . . from **$5.00**

DIGITAL TEST PROBES

For Lab and Field Testing

- Provide positive, non-ambiguous identification of true logic level
- Detect pulses as narrow as 30ms
- Derive power from unit under test
- Eliminate need for a scope in many cases
- Require no hands when used with A P Test Clip

List price . . . from **$35.00**

SOLDERLESS TERMINAL STRIPS

Save Time — Eliminate Heat Damage

- Accept all DIP's, TO-5's and discrete components
- Need no special patch cords
- Accept any terminal cross-section from .010" to .032"
- Unequaled holding power with wiping action gold plated beryllium copper contacts
- Contact resistance .001 ohms
- Five sizes — up to 96 terminals, each with four tie-points

List price . . . from **$6.30**

BREADBOARD

For Quick, Reliable, Solderless Connections

- Provides 2,264 connections for LSI design — 566 terminals, each with 4 tie-points
- Incorporates A P Terminal Strips
- Requires no sockets, plugs, connectors or special patch cords
- NEMA G-10 glass epoxy base with gold plated two ounce copper ground plane
- Ready to use — not a kit

List price . . . from **$85.00**

OMNICARDS

For Design, Prototype and Production

- Offer complete IC and discrete component mix capability
- Provide 768 tie-points in continuous dual-in-line matrix
- Simplify assembly — pilot holes hold components for easy front surface soldering
- Speed prototype check out
- 22 connector, 4⅜" x 6⅜" cards fit standard 5¼" card racks
- Reusable

List price . . . from **$8.35**

UNICARD

For Simplified Breadboarding and "In System" Testing

- Combines advantages of A P Terminal Strips and Omnicards
- All DIP's, TO-5's can be plugged in — without soldering heat damage
- Provides complete design flexibility with 784 tie-points; 22 connector pads; heavy ground and power buses
- Plugs into standard 5¼" rack for immediate functional check

List price . . . **$27.50**

Where new concepts in IC handling originate

MODULAR TYPE HIGH DENSITY PACKAGING PANEL

for 14 and 16 Lead Dual-in-Line IC's. Patterns in multiples of 30 up to 180. Pattern accepts 3 inter-facing plugs for input-output connection. Double sided board with power and ground planes. Accepts round and flat lead packages. Wire-Wrap termination sufficient for 3 levels of 30 gauge wire.

HIGH DENSITY PACKAGING PANEL
Patterns for 14 and 16 Lead Plug-In ICs

30 patterns standard
Double sided board with power and ground planes at each pattern
Wipe action contacts assure high reliability
Wire Wrap® termination

BREADBOARD AND TEST PANELS

10, 25 & 50 patterns standard. Eliminates soldering or welding IC leads. Also solderless jumper interconnections.

Also available for flat pack and TO-5 IC's

LOW PROFILE SOCKETS

Available for 14 & 16 lead packages, accepts all packages with round or flat leads. Inner rail design. In diallyl phthalate or black phenolic with gold or tin plated contacts.

PC Style. Directly interchangeable! Exclusive socket configuration identical to IC package. Saves time, simplifies mounting on PC board.

Has wiping type beryllium copper contacts

Wire-Wrap Style permits fast, easy mounting on boards. For .036 diameter holes. Retention and alignment assured without cement or special fasteners.

Contacts individually replaceable without removal of entire socket. Wire-wrap terminals — .025" square tails. Sufficient length for 3 levels of 30 gauge wire.

TO-5 CASE SIZE TEST AND PACKAGING SOCKETS

Positive retention — high contact reliability. Test sockets permit easy, fast insertion and withdrawal.

6-8-10-12 contact arrangements.
Wide range of terminal styles.
Teflon insulated body with beryllium copper, gold-plated contacts.

Large selection of Module and Transistor Sockets also available.

®Trademark Gardner-Denver Co.

Our flexible designs permit fast, easy modifications to suit particular requirements without premium charges or extended deliveries.

CTS CORPORATION ELKHART, INDIANA HYBRID CIRCUIT

CIRCUITRY TO SPECIFICATION

Over ten years of CTS cermet circuitry experience are concentrated in a 65,000 square foot facility in West Lafayette, Indiana, devoted to the manufacture of cermet passive and active circuits.

Cermet microelectronics offers many design possibilities to the forward-thinking engineer. Words such as high power, extremely low power, high frequency, precision, miniature size, low noise, and high reliability are all used to describe this concept. Another word "flexibility" should also be included. This is the key to the success of the CTS cermet microelectronics system. In order to provide the customer with an approach most consistent wi h application, CTS offers both prototype and prod ic facilities, several construction techniques, numerous c aging methods, three levels of quality control, and li bility data to demonstrate product performance und th environmental conditions you specify.

In order to achieve the best product for the lowest st CTS offers the flexibility required to optimize each pl cation. Careful analysis of each requirement by our d ig engineering, production, and quality control pers ne enables us to recommend the best product design co sis tent with your requirements.

ORDERING INFORMATION: Place hybrid circuit orders at the following address:

WIREWOUND and FILM PACKAGED NETWORKS

FEATURES

- Choice of linear wirewound, bobbin wirewound, metal film, carbon film or cermet elements
- Less components to stock or handle
- Reduced inspection time
- Ease of assembly
- Matched resistors cannot be mixed or lost
- Complete environmental protection
- Dale networks meet or exceed requirements of MIL-R-26, MIL-R-93 or MIL-R-10509, depending on type of element used
- Packaged to meet your requirements

GENERAL RESISTOR ELECTRICAL CAPABILITIES

	WIREWOUND	FILM (Carbon & Metal)
Power Rating	.1 to 10 W	.02 to .5 W
Resistance Range	1 ohm to 1.5 Meg.	5 ohms to 5 Meg.
Tolerance	.02% to 1%	.1% to 1%
Tolerance Match	.005%	.05%
Temp. Coefficient	5 PPM/°C from 0° C to +75° C	25 PPM/° C
Temp. Coefficient Match	2 PPM/° C from 0° C to +75° C	7 PPM/° C
Resistance Stability	.005%/yr.	.03%/yr.
Operating Temp.	−65° C to +145° C	−55° C to +175° C

LADDER NETWORKS

- **Output Accuracy:** ± .05% full scale accuracy or ± 1/2 least significant bit, whichever is less.
- **Output Variation with Temp.:** ± .1% full scale accuracy or ± 1 least significant bit, whichever is less.
- **Operating Temp. Range** (For Accuracies Specified Above): 55 to +70° C (Film Type) −55° C to +125° C (Wirewound Ty).
- **Input Resistance** (All inputs connected): 1KΩ to 500KΩ
- **Output Resistance** (All inputs grounded): 250Ω to 125KΩ
- **Insulation Resistance:** 100 Megohms minimum.
- **Terminals:** Solderable or weldable wire leads.
- **Packaging:** Epoxy or Silicone resin potting. Transfer mold, Can be encapsulated. Other types of special packaging a ila to meet your requirements.

ANDARD DRIVER CIRCUITS — CUSTOM HYBRIDS

LMD - 3 DRIVER
PULSE DIFFERENTIATOR
.310″ x .360″ x .150″

rid mocircuit converts a positive step age i a differentiated positive output e. Usul as a driver for stepping switches latclg relays to reduce the average er or old-in current when driving units puls of long duration. Upon application an inp pulse or voltage, a differentiated ut pie is produced which returns to maining negligible standby power for tinuou application of input voltage. Nega- differentiation is inhibited on removal of ied vage.

SPECIFICATIONS

	Symbol	Value
ximum put voltage	V+	35 VDC
ximum utput current	I Out	1.5 Amp
ximum ulse rate	PRF	2 PPS
ximum on drop	V on	3 V
eratin emp. range	T o	0 to +100°C
orage mp. range	T s	−55 to +150°C
se wi		50 msec at 50% amplitude

her Vages and Output waveshapes on request.

LMD - 7 DRIVER
INTEGRATED CURCUIT INTERFACE
.6″ x .6″ x .25″

Hybrid thick film circuit converts low level input into high level output signal for driving solenoids, stepping switches, lamps and peripherial equipment. Input trigger threshold may be selected to various levels. Output switching circuit is applied between the load and common return and will switch voltage as high as 45 volts with built-in transient protection against inductive overshoot. Higher threshold levels and load switching capabilities are available on special requests.

SPECIFICATIONS

	Symbol	Min.	Typ.	Max.
Applied voltage	Vc		28V	32V
Output voltage	Out	3V		45V
Input threshold	In	1.5V	3.0V	32V
Output current	I Out			2A
Surge current	I Surge			5A
Max. "ON" voltage drop	V On		1.4V	2V

LMD - 70 PULSER DRIVER
FOR USE WITH EXTERNAL RESET
.3″ x .3″ x .3″

Miniature hybrid pulser and SCR driver circuit is designed for use with electromechanical stepping switches or solenoid / interrupter switch combinations to provide controlled long interval stepping rates. Time interval is controlled by external resistance. Due to the small size it is useful in driving light loads or heavy loads at low speed or intermittant duty. A unijunction transistor and resistor capacitor network establishes the firing rate and triggers an SCR for switching the load. SCR reset is accomplished by opening of the solenoid interrupter contacts breaking the holding current to the SCR. Max. ON time is controlled by the speed of the solenoid and opening of interrupters; therefore duty cycle and load limits are dependent upon impedance and speed of operation.

SPECIFICATIONS

Operating voltage range	12 to 35 VDC
Maximum surge current (20 msec. max.)	7 Amps
Time interval (max.)	200 msec.
Timing accuracy	±20%
Maximum case temperature	175°C

STM HYBRID MICROELECTRONICS

hethr it's producing simple driver modules, volt- e reulators, complex microelectronic switches or y oier custom circuit miniaturization, Ledex is e company that's staffed to help you

Exert Design Assistance We make sure our field peple are knowledgeable . . . and that our "in- sid" people go "outside" when you need them. Tht's what we have — experienced people who'll jup on a plane on an hour's notice and give you deign help.

Fat Prototype Development Your schedules are shrt. You need accurate custom microcircuitry arwers pronto. So we're set up to furnish prototypes fast, normally within four to six weeks, and some within a few days.

Consistent Production Quality You can be sure you'll get the kind of quality you're looking for with Ledex microcircuitry. We'll stake our long-earned reputation on that.

Other Ledex experience includes designing and producing made-to-order servoamplifiers, demodulators, and power switches. For standard stock model circuit data sheets and a full color catalog that explains our microcircuitry capability in detail, write or call. We'll welcome the chance to work with you.

LEDEX DIVISION, LEDEX INC.
126 Webster St., Dayton, Ohio 45401 phone (513) 222-6992

"...and because complex hybrids are not components but subsystems, only a system oriented company can best apply the theory of hybrid microelectronics — we are that company."

Free consulting services are offered to Companies who wish to investigate specific hybrid mechanizations.

Hybrid Seminars will be arranged for those groups of Engineers wishing general hybrid application knowledge.

Multitech has the capability of pretesting chip devices (I.C.'s, MOS-FET & LSI) *Over Temperature* to investigate component performance characteristics and parameter spreads prior to assembly into the hybrid.

Multitech's engineers will convert existing designs to hybrid or will design the circuit per the customer's performance requirements.

Complete engineering and production facilities are available to support every hybrid design technique.

EC CALCULATOR TUBES-THE ULTIMATE IN ELECTRONIC NGINEERING WITH SUPER MINIATURIZATION OF DIGITAL DICATOR TUBES

Only NEC has the latest digital indicator tubes. Shown here is the No. DG12E/LD-915. ***Equipped with the unique grid which enables dynamic drive***—these are by far the most suitable digital indicator tubes for sharp, clear focus of numerical figures. Other smaller indicator tubes available with similar characteristics. Catalog sheets on request.

Using directly heated cathode and newly-developed phosphor materials permits uni-planar display in green color to eliminate viewing eye fatigue. FEATURES LOW POWER, LOW VOLTAGE AND COMPETITIVELY PRICED.

ELECTRICAL SPECIFICATIONS:

Filament Voltage	0.8V
Filament Current	90mA
Anode (Phosphor Segment) Voltage	20 Vdc
Grid Voltage	20 Vdc
Anode Current (Sum of all segment currents)	1mAdc
Grid Current	4mAdc
Color of Figures	Green
Brightness	80ftL

Scale of measurement 1" = 25.4 mm

A red dot is provided at root of pin No. 1. Arrow mark denotes indicator face of tube.

E FOREMOST PIONEER IN IC MINIATURIZATION FIERS NEW HORIZONS IN MASS PRODUCED PRECISION ADE INTEGRATED CIRCUITS

AT NIPPON ELECTRIC the responsibility of leadership is serious business, which explains why our advanced technology makes NEC integrated circuits the first choice of leading electronic engineers — NEC has achieved record-breaking production volume to meet the constantly growing worldwide demand — ***Because . . .*** NEC's Integrated Circuits have proven built in quality, precision engineering, and total reliability backed by constant Research and Development. FREQUENT R & D MODIFICATIONS MAKE NECESSARY FAST CHANGES IN CHARACTERISTICS.

NEC INTRODUCES TV IC's. For Color or Black and White Television NEC IC's are economical and offer high efficiency performance.

Following is a partial list of the extensive range of NEC ICs for television:

μPC17C	IF Amplifier with Ratio Detector and Audio Pre-amplifier
μPC19C	Color Demodulator
μPC20C	Output Audio Amplifier
μPC23C	AFC Tuner Circuit
μPC24C	Video Amplifier with Sync Circuit, Noise Squelcher, and keyed AGC.

We welcome customer specifications for MSI and LSI.

New types are constantly being added to our extensive range of IC's: UHF/VHF Tuner—Higher Power Monolithic Audio Amplifier—and Horizontal AFC with Vertical and Horizontal Oscillator.

For other applications we recommend our DTL and TTL, as well as the MOS IC's. There have ***"top priority"*** in the electronic industry for a variety of exacting applications, such as: Electronic Computers, Switching Equipment, Desk-Top Calculators, and numerous other industrial and commercial electronic instruments.

For the U.S.A. and Canada, call, write, or wire:

MONOLITHIC INTEGRATED CIRCUIT

DTL 930
DIODE TRANSISTOR LOGIC
LARGEST FAMILY OF
COMPATIBLE IC'S

The broadest 930-type DTL line in the industry . . . 49 circuits – a dozen unique and exclusive circuits . . . both military and indus trial devices . . . three packages — dual in-lines in ceramic or low cost plastic . . . available off-the-shelf from your local distributo

ECL I AND ECL II
EMITTER-COUPLED LOGIC
HIGH-SPEED
INTEGRATED CIRCUITS

Eleven ECL 300/350 circuits, twenty-eight high-speed ECL I circuits, with more to come . . . both military and industrial device . . . flat pack ceramics or dual in-lines in ceramic or plastic pack ages . . . all completely interchangeable with Motorola MECL and MECL II . . . most available off-the-shelf now from your loca distributor.

TTL
TRANSISTOR-TRANSISTOR
LOGIC
POPULAR 5400/7400 SERIES

Twenty-seven most popular 5400/7400 TTL series circuits no in design . . . many already in production and ready for immedi ate delivery . . . backed by Stewart-Warner's outstanding produc tion record proven in DTL and ECL lines . . . both military an industrial devices with ceramic or plastic package option in dua in-lines.

CHIPS AVAILABLE
IN ALL THREE LINES

Stewart-Warner Microcircuits also makes available IC chips in al three lines — DTL, ECL, and TTL — and provides the same hig quality circuits as are packaged in the standard products.

To order products or for more information, write or call th factory at the numbers listed below, or contact your local Stewart-Warner Microcircuits Factory Representative or Distributor.

VA-741 HIGH PERFORMANCE OPERATIONAL AMPLIFIER

FEATURES

- No frequency compensation required
- Short-circuit protection
- Offset voltage null capability
- Large common mode and differential voltage ranges
- Low power consumption
- No latch up

GENERAL DESCRIPTION

The VA-741 is a high performance monolithic operational amplifier constructed on a single silicon chip. It is intended for a wide range of analog applications. High common mode voltage range and absence of "latch-up" tendencies make the VA-741 ideal for use as a voltage follower. The high gain and wide range of operating voltages provide superior performance in integrator, summing amplifier, and general feedback applications. The VA-741 is short-circuit protected and has the same pin configuration as the popular 709 operational amplifier, but requires no external components for frequency compensation. The internal 6 db/octave roll-off insures stability in closed loop applications.

ABSOLUTE MAXIMUM RATINGS

Supply Voltage	±22 v
Internal Power Dissipation (Note 1)	500 mw
Differential Input Voltage	±30 v
Input Voltage (Note 2)	±15 v
Storage Temperature Range	−65°C to +150°C
Operating Temperature Range	−55°C to +125°C
Lead Temperature (Soldering, 60 sec)	300°C
Output Short-Circuit Duration (Note 3)	Indefinite

NOTES:

(1) Rating applies for case temperatures to 125°C; derate linearly at 6.5 mw/°C for ambient temperatures above +75°C.

(2) For supply voltages less than ±15 v, the absolute maximum input voltage is equal to the supply voltage.

(3) Short circuit may be to ground or either supply. Rating applies to +125°C case temperature or +75°C ambient temperature.

GENERAL DESCRIPTION

The VA-747 is a dual monolithic operational amplifier fabricated on a single silicon chip. The device is intended for a wide range of linear applications where conservation of weight or space is important. High gain and wide range of operating voltage provide superior performance in integrator, summing amplifier and general feedback applications. The VA-747 is ideal for use as a voltage follower because of a high common mode voltage range and absence of "latch-up". The device requires no external frequency compensation components and is short-circuit protected. The internal 6dB/octave roll-off insures stability in closed loop applications.

This device is also available in chip form.

TES: (1) Rating applies for case temperature to 125°C; derate linearly at 9.0 W/°C for ambient temperatures above +60°C. (2) For supply voltages less than ±15 V, the absolute maximum input voltage is equal to the supply voltage. (3) Short circuit may be to ground or either supply. Rating applies to +125°C case temperature or +60°C ambient temperature for each side. (4) Rating applies for case temperature to +70°C; derate linearly at 9.0 mW/°C for ambient temperatures above +60°C. (5) Short circuit may be to ground or either supply. Rating applies to +70°C case temperature or +60°C ambient temperature for each side.

PHYSICAL DIMENSIONS

NOTES:
All dimension in inches. Leads are intended for insertion in hole rows on .300 centers.
They are purposely shipped with "positive" misalignment to facilitate insertion. Board-drilling dimensions should equal your practice for .02 inch diameter lead. Cap, base and leads are gold-plated Kovar.

VA-748 HIGH PERFORMANCE OPERATIONAL AMPLIFIER

FEATURES

- Short-circuit protection
- Offset voltage null capability
- Large common-mode and differential voltage ranges
- Low power consumption
- No latch up

GENERAL DESCRIPTION

The VA-748 is a high performance monolithic operational amplifier constructed on a single silicon chip. It is intended for a wide range of analog applications where tailoring of frequency characteristics is desirable. High common mode voltage range and absence of "latch-up" make the VA-748 ideal for use as a voltage follower. The high gain and wide range of operating voltages provide superior performance in integrator, summing amplifier, and general feedback applications. The VA-748 is short-circuit protected and has the same pin configuration as the popular VA-741 operational amplifier. Unity gain frequency compensation is achieved by means of a single 30 pF capacitor.

ABSOLUTE MAXIMUM RATINGS

ERAL ESCRIPTION

VA-8 is a precision operational lifier having specifications a factor en ber than FET amplifiers over a °C +125°C temperature range. cted nits are available with offset ges ess than 1.0 mV and drifts tha 5 μV/°C, again over the mili- tem rature range. These specifica- s ma it possible to eliminate off- adj ments in most cases, and to in rformance approaching chop- stab zed amplifiers.

dev e operates with supply volt- s fro ±2V to ±20V and has suffi- nt sply rejection to use unregu- d splies. Although the circuit is rch geable with and uses the same npen tion as the 101A an alternate -npen tion scheme can be used to ke it articularly insensitive to power ply ise and to make supply bypass acit s unnecessary.

lo current error of the VA-108 kes ssible many designs that are pra ical with conventional ampli- s. In fact, it operates from 10 MΩ rce esistances, introducing less or th devices like the 709 with 10 sou es. Integrators with drifts less n 50 μV/sec and analog time delays exc s of one hour can be made ng pacitors no larger than 1 μF.

VA-715 HIGH SPEED OPERATIONAL AMPLIFIER

FEATURES

- Fast settling time, 300 ns
- Wide Bandwidth, 65 MHz
- High slew rate, 65 V/μs
- Wide operating supply range
- Wide input voltage ranges

GENERAL DESCRIPTION

The VA-715 is a high speed, high gain, monolithic operational amplifier constructed on a single silicon chip. It is intended for use in a wide range of applications where fast signal acquisition or wide bandwidth is required. The VA-715 features fast settling time, high slew rate, low offsets, and high output swing for large signal applications. In addition, the device displays excellent temperature stability and will operate over a wide range of supply voltages. The VA-715 is ideally suited for use in A to D and D to A converters, active filters, deflection amplifiers, video amplifiers, phase locked loops, multiplexed analog gates, precision comparators, sample and holds, and general feedback applications requiring DC wide bandwidth operation.

ABSOLUTE MAXIMUM RATINGS

Supply Voltage	±18 V
Internal Power Dissipation (Note 1)	500 mW
Differential Input Voltage	±15 V
Input Voltage (Note 2)	±15 V
Storage Temperature Range	−65°C to +150°C
Operating Temperature Range	−55°C to +125°C
Lead Temperature (Soldering, 60 sec)	300°C

NOTES:
(1) Rating applies for case temperatures to +125°C; derate linearly at 6.5 mW/°C for ambient temperatures above +75°C.
(2) For supply voltages less than ±15V, the absolute maximum input voltage is equal to the supply voltage.

VA-723 PRECISION VOLTAGE REGULATOR

FEATURES

- Positive or negative supply operation
- Series, shunt, switching, or floating operation
- .01% line and load regulation
- Output voltage adjustable from 2 to 37 volts
- Output current to 150 ma without external pass transistor

GENERAL DESCRIPTION

The VA-723 is a monolithic voltage regulator constructed on a single silicon chip. The device consists of a temperature compensated reference amplifier, error amplifier, power series pass transistor, and current limit circuitry. Additional NPN or PNP pass elements may be used when output current exceeding 150 ma are required. Provisions are made for adjustable current limiting and remote shutdown. In addition to the above, the device features low standby current drain, low temperature drift, and high ripple rejection. To extend output current capability up to .5 a, Varadyne offers the series J voltage regulator described in another brochure.

APPLICATIONS

Applications include laborat supplies, isolation regulators level data amplifiers, logic c lators, small instrument power airborne systems, and other p plies for digital and linear ci

09 VOLTAGE REGULATOR

FEATURES

- Single chip construction
- Complete 5 V regulator
- Delivers up to 200 ma in TO-5 package
- Blow-out proof
- Current limiting

GENERAL DESCRIPTION

VA-109 is a complete 5 V regulator operation on a single silicon chip. It is designed for local regulation on digital cards, eliminating the distribution problems associated with single-point regulation. The device is available in a common transistor package. In the TO-5 header, it can deliver output currents in excess of 200 mA, if adequate heat sinking is provided.

Regulator is essentially blow-out proof. Current limiting is included to limit peak output current to a safe value. In addition, thermal shutdown is provided to keep the IC from overheating. If internal dissipation is too high, the regulator switches on and off in a duty cycle that prevents excessive heating.

VA-109 does not use a zener diode for the internal reference. Instead, the reference is developed from the highly-predictable emitter-base voltage of the transistor. This unique low-voltage reference makes possible operation with output voltages below 6.5 V. Further, production tolerances are tight enough that individual adjustment is unnecessary. It is a simple matter to guarantee that the output voltages under all conditions, including variations in temperature, input voltage and load as well as long-term stability, that are well within the operating range of digital IC's.

Considerable effort was expended to make the VA-109 easy to use and minimize the number of external components. It is not necessary to bypass the output, although this does improve transient response somewhat. Input bypassing is needed, however, if the regulator is located very far from the filter capacitor of the power supply. Stability is achieved by methods that provide good rejection of load or line transients as are usually seen with TTL IC's.

VA-1595 MONOLITHIC FOUR-QUADRANT MULTIPLIER

FEATURES

- Excellent linearity: 1% max error on X-input, 2% max error on Y-input
- Adjustable scale factor, K
- Excellent temperature stability
- Wide input voltage range: ±10 volts

GENERAL DESCRIPTION

The Varadyne monolithic four-quadrant multiplier is designed for use where the output voltage is a linear product of two input voltages. Typical applications include multiply, divide,* square root,* mean square,* phase detector, frequency doubler, balanced modulator/demodulator, electronic gain control.

* When used with an operational amplifier

VAF-100 STATE VARIABLE ACTIVE FILTER

NOTE: THE VAF-100 AND VAF-200 REPRESENT STANDARD PRODUCTS. VARADYNE ALSO FABRICATES CUSTOM A FILTERS AND RELATED SIGNAL PROCESSING MODULES.

FEATURES

- Simultaneous bandpass, low-pass, and highpass outputs
- Independent bandwidth, frequency, and gain adjustment
- Power gain available in all operating modes
- Damping feedback may be removed for oscillator applications
- VAF-200 has additional 'free' compensated amplifier for odd pole isolation, gain or feed forward element.

ABSOLUTE MAXIMUM RATINGS FOR VAF-100

Supply Voltage ±22V
Input Voltage ±30V
Storage Temperature Range −35°C to +85°C
Operating Temperature Range 0°C to +70°C
Output(s) Short Circuit Duration (Note 1) Indefinite

Note 1: Short Circuit may be to ground or either supply.

GENERAL DESCRIPTION

The VAF-100 is an active filter employing state variable techniques to synthesize any form of the second order polynomial, N(s)/D(s). The multiloop negative feedback used in the device results in excellent stability of polynomial coefficients while allowing independent gain, frequency, and bandwidth adjustment. Sensitivity of these parameters is comparable to passive RLC networks over the useful range of operation. The device may be used singularly, in parallel, or in cascade to realize complex filtering functions, including those containing numerator zeros. Other applications of the device include analog computer elements and low-distortion sine-cosine wave oscillators.

ELECTRICAL CHARACTERISTICS FOR VAF-100 AND VAF-20

($V_S = \pm 12V$, $T_A = 25°C$ unless otherwise specified)

* NOTE: VAF-200 has same specifications, except that it has a wider op temperature range of −55°C to +125°C and an additional oper amplifier.

Parameter	Conditions	Min	Typ	Max
The following specifications apply for $R_F = \infty$:				
Frequency Range			0-10 k	
Q Range			.05-1000	
Maximum Q			1000	
Voltage Gain	$Q \leq 100$, $f_o \leq 1$ kHz all outputs		0	
Output Noise	$Q = .707$, $f_c \leq 1$ kHz LP output HP output		50 200	
Output Offset	R1 = R2 = 100 k input shorted		±20	
Output Swing	$R_L \geq 2$ k all outputs		22	
Tuning Resistance	recommended limits	3 k		1 meg
The following specifications apply for $R_F = 0$:				
Frequency Range			0-5 k	
Q Range			.02-500	
Maximum Q			500	
Voltage Gain	$Q \leq 100$, $f_o \leq 1$ kHz BP output LP output HP output		0 +10 −10	
Output Noise	$Q = .707$, f = 1 kHz LP output HP output		400 50	
Output Offset	R1 = R2 = 100 k input shorted		±200	
Output Swing	$R_L \geq 2$ k HP output BP output LP output		2.2 6.9 22	
Tuning Resistance	recommended limits	2 k		1 meg
The following specifications apply over the temperature range $0 \leq T_A \leq 70°$				
Quiescent Power Consumption			150	
Input Resistance			100 k	
Output Resistance				50
Skirt Selectivity — LP HP BP			−12 +12 −6	
Frequency Temperature Coefficient			.01	
Q Temperature Coefficient			.01	
Gain Temperature Coefficient			.01	

NOTE: These parameters assume precision film resistors and NPO tuning ca tors as a minimum. Typical TC's of these parts are ±100 ppm/°C ±30 ppm/°C respectively.

$$\frac{V_{HP}}{V_{IN}} = \frac{s^2K(1 + A_2 + A_3)}{s^2 + s\omega_1A_1(1 + A_2 + A_3) + A_2\omega_1\omega_2}$$

$$\frac{V_{BP}}{V_{IN}} = \frac{-s\omega_1K(1 + A_2 + A_3)}{s^2 + s\omega_1A_1(1 + A_2 + A_3) + A_2\omega_1\omega_2}$$

$$\frac{V_{LP}}{V_{IN}} = \frac{\omega_1\omega_2K(1 + A_2 + A_3)}{s^2 + s\omega_1A_1(1 + A_2 + A_3) + A_2\omega_1\omega_2}$$

where
K = Voltage transfer from input to (
A_1 = Voltage transfer from BP to Q1
A_2 = Voltage transfer from LP to HP
A_3 = The ratio R_5/R_G or $(R_F + R_4)||R_5$
$\omega_1 = 1/R_1C_1$
$\omega_2 = 1/R_2C_2$

VAF-200 STATE VARIABLE ACTIVE FILTER

GENERAL DESCRIPTION

The VAF-200 is a state variable filter with edge mounting P.C. connector for high density instrumentation and communication systems.

The additional compensated operational amplifier may be used to advantage in realizing notch filters, oscillators and power output stages.

ABSOLUTE MAXIMUM RATINGS FOR VAF-200

Supply Voltage ±22 Volts
Power Dissipation 2 Watts
Input Voltage ±30 Volts
Storage Temperature Range −65°C to +150°C
Operating Temperature Range −55°C to +125°C
Output(s) Short Circuit Indefinite

ET SEAL AND PACKAGE CAPABILITY

SIBL INGREDIENTS . . . ENTI TO QUALITY COMPONENTS

sibl ngredients?

es, t re are such things.

hey the intangibles that make the difference between rst-c s, metalized-ceramic component (or subcomponent) a f ounces of raw mineral substance.

here in each component that you purchase is the pro- sion technological, and organizational capabilities of mak. These capabilities are the **real** determinants of duct liability — the invisible ingredients that assure you quali and precision at the lowest cost.

OFES IONALISM — OUR KEY TO QUALITY

ginee best understand engineers, and we make no bones out i You need an engineer's attentive ear when you re- re, i a limited time, one or one-hundred-thousand rigidly ecifie intricately-designed, metalized-, brazed-, or glassed- ami arts. That's when you will find it profitable to talk a Va dyne engineer. He's trained to listen.

A Var yne engineer will give your ideas the professional re- ect t y deserve. He understands your problems, and he can mmu cate with you. This dialogue is built into the product.

CHN AL SKILL — OUR KEY TO PRECISION

ectro c science and ceramic technology are our business. Spec skills are needed to transform raw ceramic and etals nto high quality electronic device packages. Our ff's ility to join ceramic to metal, ceramic to glass, in y co bination . . . hermetically sealed . . . attests to the liber f their artisanship.

The pert craftsmen in our complete, modern, in-plant ating acility are skilled in common and precious metal ecifi tion electrolytic and electroless plating, as well as oduc n solder coating and other metal finishing.

Prec on is an integral part of our operation.

GAN ATION — OUR KEY TO LOW COST

r or nization begins with **you** — it's **your** design, **your** specifications, and **your** requirements. We maintain a flexible manufacturing system so that we can produce what YOU want, quickly and inexpensively.

Each job, therefore, is organized to meet **your** individual needs.

We house in 30,000 square feet of air conditioned space, a highly automated plant, a wide variety of proprietary machinery, a complete modern tool and die shop, and a multiple-staged quality control system having advanced instrumentation.

15 YEARS OF PROFICIENT PRECISION PRODUCTION

FORMING —simple and intricately-shaped ceramic components and ceramic substrates for thick and thin film circuitry formed by pressing, extruding, and casting, as well as by proprietary techniques.

LAMINATING —true monolithic laminates, thru-metalized laminates, and thin-glass metalized-ceramic sandwiches with or without enclosed conductors, and all to hermetic specifications.

METALIZING —detailed patterns to meet the most exacting specifications.

FABRICATING —ceramic to almost any metal using special reducing atmosphere BRAZING kilns; facilities to fabricate high power, high frequency packages for hot- or cold-weld, or brazed closure; multi-lead and fine resolution packages; thick film resistor-conductor circuits; hermetic housings for transistors, integrated circuits, diodes, varactors, rectifiers, capacitors, resistors; seals and assemblies for aerospace, oceanographic, and other special purpose applications.

PLATING —complete in-plant gold, nickel, and copper electroplating, electroless plating, and production solder coating.

INTEGRATED CIRCUIT FLAT PACK LIDS & PREFORMS High Purity Precision Alloys

SOLDER CLAD LIDS

Made from Kovar with gold-tin or gold-germanium eutectic solder, clad on one side and pure gold plated or clad on other side. A high degree of flatness can be maintained and cladding thicknesses are available in .0005, .0010, .0015 and .002 inches.

PLAIN LIDS

Can be supplied gold plated, clad or plain Kovar. Close control of base material and plating insures against contaminating the gold surface avoiding poor solder joints and voids.

SOLDER PREFORMS

Solder (80% gold, 20% tin and 88% gold, 12% germanium eutectic) preforms are held to close tolerances on both flatness and physical dimensions. There are no chips, cracks or slivers on the edges and parts are chemically cleaned and packed in inert atmospheres to prevent contamination and insure unlimited shelf-life.

KOVAR WINDOWS

Can be supplied in all sta rd special sizes to meet your ec tions. Close tolerances ar el flatness, outside dimensions b Parts are chemically cle d packed in sealed container n atmospheres to prevent con in and oxidation.

KOVAR WINDOW SIZES Most Sizes Generally Carried In Stock

All dimensions in inches.

"E" dimension — normal thickness of .010 inches. Most other thickness available on request, except solder preforms which are normally .0015/ .002 inches thick.

INTEGRATED CIRCUIT FLAT PACK EXTRUDED LIDS High Purity Precision Alloys

GOLD PLATED FOR USE WITH A SOLDER PREFORM

New coined lids are extremely flat and highly rigid. The manufacturing ou upsets the grain structure of the metal, preventing any warping of l du the soldering operation. Final seal-jigging operation can be eliminat if is used in inverted position.

CLAD WITH GOLD-TIN FOR USE WITHOUT A SOLDER PREFORM

Clad coined lids are extremely flat and highly rigid. There is no warpi of during the solder operation and lid can also be used in inverted sit There is no extra handling or alignment of preform and edges are f chips, cracks or slivers.

All dimensions in inches.

"E" dimensions — Any thickness from .004 to .010 inches. Standard thickness .005 and .010 inches.

"F" dimension — Any dimension from .001 to .010 inches (depending upon "E" dimension).

See YELLOW SECTION for Local Offices, Phones

— R S — TUBING

from)005 to 1¼" diameter in continuous or cut lengths.

D AN FORMED SHAPES

ities vailable for precision sections of unusual con-
tion From almost any alloy.

— IN TS — CASTINGS

eight from milligrams to several hundred pounds.

META

FOI AND SHEET

knes from .0003 to 2", widths from .005 to 24".

RINGS AND PREFORMS

Sizes from .020 to 24" inside diameter formed from almost any size, round, square, rectangular or special shaped wire.

SPHERES, POWDERS AND GRAIN

Supplied in sizes from .0005 to .250 with tolerance as close as ±.0002 (or closer for special requirements.)

PREFORMS AND STAMPINGS

In sizes from .015 to 10" I.D., thickness from .0003 to ½".

TEL: (714) 542-4794

TECHNICAL GLASS

GENERAL DESCRIPTION

Direct drawing, redrawing, sintering and preforming of proprietary glasses, as well as all glasses listed in the Kimble and Corning catalogs. Such as:

KIMBLE EN-1, K772, KG-1, KG-12, KG-33, N51A, R-6
CORNING 0010, 0080, 0120, 7052 and 7720

STANDARD PRODUCTS

- Glass parts for DO-7
- End double plug diodes
- Reed switches
- Photo diodes
- Miniature lamps
- Resistor, capacitor and rectifier housings
- Compression seal windows
- High voltage feedthroughs

NOMINAL SPECIFICATIONS

.201″ - .225″	±.004″	±.002″
.226″ - .250″	±.005″	±.002″

AFG-47 is also available in multiforms. Refer to Hanibal Glass for details.

LEAD ALUMINO BOROSILICATE GLASS — AFG-47

AFG-47 is a lead alumino borosilicate glass carefull lated to match the thermal expansion character Molybdenum and Kovar.

IMPORTANT: Virtually alkali-free, this lead alumino cate glass is also finding application in high volta throughs and resistor housings.

CLEAR POTASH SODA LEAD GLASS — 0010/KG-1

0010/KG-1 is a clear potash soda lead glass offerin lent electrical characteristics.

CLEAR BOROSILICATE GLASS — KG-33/7740

KG-33/7740 is a clear borosilicate with high chem bility and excellent electrical resistivity.

SOFT LIME GLASS — R-6/0080

R-6/0080 is a soft lime glass for use where therr chemical resistance are not of prime importance.

TECHNICAL CERAMICS

GENERAL DESCRIPTION

Dielectric materials, falling in a category somewhere b glass and aluminum oxide (Al_2O_3).

Combinations of glass and ceramic to match the ex coefficients of seals closer than pure glasses.

FEATURES

- Flexible tape system permits parts to be fabrica simple punch press tooling
- Low firing temperature (982°C)
- Materials may be metallized or electroplated
- Available in four compositions
- Engineered thermal expansion to customer specifica
- Thermal expansion constant to ±.003″ or better (on orders, ±.002″ tolerance is obtainable)

TYPICAL APPLICATIONS

- Substrates
- High temperature current boards
- Microcircuit packages and lids
- Relay and crystal preforms
- Connector preform

COMPARISON OF PHYSICAL AND ELECTRICAL PROPERTI OF TECHNICAL GLASS AND CERAMICS

PHYSICAL PROPERTIES

HYBRID ALUMINUM OXIDES 50-P	50-H	90-P	90-H		GL 7052

				Modules of Elasticity — x 210⁴ lb/in²	820
	12,000		12,000	Modulus of Rupture — x lb/in²	2500
975		1100		Working or Sealing Temp. °C (3.)	950

ELECTRICAL PROPERTIES

	4.9		6.3	Dielectric Constant — 1 MHz 20°C	4.9
	1.5		1.3	Loss Factor — 1 MHz 20°C	1.3
	550		520	Dielectric Strength—Volts/mil (2.)	500
	8.5		8.0	Volume Resistivity — Log 10 250°C	9.2

(1.) Viscosity of $10^{7.6}$ poises
(2.) 100 mils thick
(3.) Dependent on the time-temperature fa also needs weighted jigs

NOTE: Type H is a high-fired type P.

See YELLOW SECTION for Local Offices, Phones

TAL PACKAGES

URES

- ght enclosures for integrated and hybrid circuit lications
- id Kvar base
- thmal expansion
- teria chosen for maximum strength and reliability
- tone glass-to-metal seals
- th fl and elevated covers available
- atfo and Can types only)
- ing ad types designed to meet all requirements of L-ST-883

FORMANCE CHARACTERISTICS

ady platform enclosures are designed to meet the re- emes of latest issues of applicable military specifica- s, including MIL-STD-883.

YSICAL — ENVIRONMENTAL

metity — Terminals (round or flathead) pass helium mass ctrometer test at 10^{-8} cc/sec atm. sensitivity threshold, MIL-STD-202, Method 112A, Condition C.

ermal Shock — Meets shock requirements of MIL-STD-202, thod 107B, Condition C.

eratial Temperature — Gold plated cases (per MIL-G- 204) withstand 200°C max., continuous operation; 5 min. 415° cycle for chip bonding.

rrosi Resistance — Meets salt spray requirements of MIL- D-20 Method 202B, Condition A.

romic Pressure — Meets requirements of MIL-STD-202, thod 205C, Condition G, for aerospace environments.

ermin Strength — Meets requirements of MIL-STD-202, thod 211, with bend tests of flatleads to Condition B and undleds to Condition C, and pull test to Condition A.

lating — Available in standard gold (per MIL-G-45204), ype I lass I — tinplate also available on special order (MIL- 107).

LECTICAL

nsulation Resistance — 1 megohm, min. @ 500 VDC.

Dielecic Voltage (Hipot) — Exceeds 210 VAC requirement in mallc size.

Capacance — Meets requirements for quartz crystals and filter vices.

AEROFLEX

AEROFLEX
brushless-wide angle D. C. Torque Motors

TYPICAL APPLICATIONS:

Inertial Systems . . . Remote Positioning Devices . . . Stable Platforms . . . Process Control Systems . . . Vane And Control Surface Actuators . . . Throttle Control Systems . . . Chart Recorder Pen-Motor . . . Special Meter-movements . . Precision Load Testing . . . Multi-input Summing Transducers.

FEATURES:

- No commutator, brush or contact friction
- Unlimited life — Infinite resolution
- Linear torque output vs. current input
- No radio noise or explosion hazard
- No motor ripple or "slot lock"
- Proven in outer space

EROFLEX

ll Rotation *brushless* D. C. Torque Motors

AEROFLEX

rqu delivery system designed to achieve maximum power ien within a minimum of space, weight and power. It con- s of permanent magnet brushless DC torquer mechanically oled with a brushless electromagnetic device.

sy em operates with a torque-speed characteristic similar a D torque motor, but without brushes, commutators or ing ontacts. It provides: virtual unlimited life • no main- anc • no RFI • no friction • no explosion hazard • impervious hard vacuum, such as encountered in deep space • unusual stae to extreme temperatures, shock, vibration, and fluid ironments.

ino rearrangement of the stator windings enables the torquer be ed directly as a stepper motor.

Ultra-precise, highly linear sensing devices for torque and force balancing systems . . .

• Linearity of 0.01% or better at null • Output torque proportional to motor current • High dynamic response • No hysterises effects, no null uncertainties, no dead spots.

Typical applications include use as measuring element in air data systems, as the final balancing force and readout on torsional suspension balances, and as the nulling force in very sensitive accelerometers.

Optional windings provide biasing torque to compensate or initially null a system, produce output torque as sum of inputs, provide velocity feedback information. Independent damping coils may also be included to suit specific application.

ROFLEX ALL SILICON TRANSISTOR DC TORQUER AMPLIFIERS

erofle offers a wide variety of transistorized torquer amplifiers each atch to its associated torque motor. This assures optimum torque output nd reponse. Aeroflex provides both the all D.C. amplifier, as well as the arrier ype amplifier.

another motor-custom built . . . by Alliance

PUT ALLIANCE IN YOUR APPLIANCE

If you want custom motors, our full complement of engineers is at your service. We build from raw material to completed motor. This assures you of the superior performance you expect. In appliances, business machines, sound equipment and mos applications, if a subfractional h.p. motor m go, it probably goes with Alliance. We supp majors . . . we know about costs.

model JS

shaded pole induction motors

The Model JS Motors are mass produced with minor variations to meet the demands of specific jobs which require a highly efficient miniature power plant. It can be used as the vital power source on all kinds of electrical and mechanical devices for electronic, electro, radio and time controls, TV and radio tuners, turntable drives for phonographs and Hi-Fi, can openers, fans, hair dryers, coin operated mechanisms, switches, signals, business machines and other special uses. These motors are equipped with impregnated bronze bearings for continuous duty. They can be furnished with or without internal fans and for clockwise or counter-clockwise rotation.

The specifications shown can be varied within limits to meet your design requirements. This would include such things as corrosion resistant finish, water resistant (impregnated coil), threaded or stepped shaft, variation of the mounting arrangement, and variations in the torque and watts input.

custom motors for many applications

H

High starting torq it suitable for re trols, air circula trains, valve contro and many other s plications.

4 speed JPQ phonomotor

Single lever shift speeds and neutra with free movem tronic dynamically rotor. Vibration-pro ings. Minimum ru hum. Unexcelled speed regulation. Designe U. L. requirements. Occupies minimum sp The Model JPQ is also available with tr winding for transistor amplifier applicati

JS long life

Built on standard frame, has a large voir on each bear tend motor life. In reduce wear, the parts are given treatment. Ideal life applications.

JSO500

Built on standard frame. Large seale ervoir and the mat are given precisi ment to give exte The mounting show standard but illust flexibility of moun

JSG

Variations can be mounting, temper operation, clutching output shaft speed, etc. This type unit a able with friction extremely quiet oper having limited torqu Duty cycle may vary from intermittent to co dependent upon torque and ambient tempe The JSG is used for TV tuners, rotisseries controls, vending machines.

L

A shaded pole motor for typewrite ness machines, fan tions, and similar e demanding high compact design and Standard motors ar with Class "A" insulation, 117 volt, 60 Available in 1¼" and 1½" stack thickness is available with this type of motor. Furthe can be obtained through our Sales Departm

R

A compact power s reversible rotation ments. This motor re capacitor. The moto provided in variou thicknesses provi range of electric torque characteristics. The specifications here are typical for a .375 stack motor.

S

This motor is for t tion type turntables tape, stereo disc and plications. It is desig manufactured to give timate in motor perf for High Fidelity eq The motor's electri physical characterist be changed to me torque, heat and mounting requirements.

When you want it NOW — call us!

100-MILLION-CYCLE APILON®-FACED CLUTCH AND BRAKE

Longer Life • Cleaner Operation with Apilon® (Ceramic Type) Friction Faces

- Typical life of wear surfaces at least ten (10) times conventional material.
- Life expectancy approximately 120 million cycles (based on work performed per cycle of 144 in. oz. for Size 20 and 288 in. oz. for size 40).

- Dust due to wear products substantially reduced.
- Physically and electrically interchangeable with most conventional units.
- A.P.I. Engineering available to establish life expectancy for specific application.

BMINIATURE CLUTCH & BRAKE

SC-MAGNETIC CLUTCH

Typical A. P. I. Specifications for ultra precision clutch and brake units . . . combining excellence in design, materials, workmanship and reliability. All units contain precision ball bearings fully protected from moisture and contamination by special seals. A. P. I. units meet government specifications for environmental tests. Infinite variations of design and mountings are available.

ENERGED — Output Shaft Coupled to Input Flange.
DE-ENERGIZED — Output Shaft and Input Flange Free to Rotate.

SPECIAL ENGINEERED UNITS

TOOTH TYPE CLUTCH

Special design to meet military reliability for airborne electronics. Specifications include operation in an explosive vapor, temperature, altitude, vibration, salt spray and humidity environments.

DUPLEX BRAKE

Compact Brake for use in a missile tape drive system. Hysteresis and friction brake with separate coils for excitation applied to a common shaft.

APILON®-FACED CLUTCH BRAKE PACK

Precision pre-aligned clutch/brake package eliminates installation problems. Ball bearing supported shafts permit direct coupling or belt drives. Packs available to house above Commercial Models 10, 20 and 40.

HYSTERESIS CLUTCHES / BRAKES

A continuous slip device capable of providing precise, infinitely adjustable torque control. Units are basically direct current sensitive . . . having excellent reliability, repeatability and linearity.

AEP MOTORS

Units shown cover a wide application range. Co facilities are available for precisely-engineered ard and custom-designed models, for critical and commercial applications. Quality controll utmost efficiency, reliability and longer life.

MOTORS

HYSTERESIS SYNCHRONOUS MOTORS — Widely used in the tape recorder and turntable industries. Single, dual or three speed models. Made to your exacting torque and speed specifications. Modifications available to suit any physical requirement. Frame diameters 1 1/16", 1 3/4", 2", 3 5/16", 3 7/8", 4 3/8" and 5 3/8".

STEPCON® STEPPING MOTORS†

Stepcon® Permanent Magnet Motor—Stepping motors feature: Speeds to 1500 pps, controlled variable speed, immediate reversal, no mechanical detents or brushes, no drift, minimum overshoot, no compensation networks or feedback required, no external damping required. Motors are digital actuators which operate bidirectionally in precise increments of 15°, 30°, 45°, or 90° per pulse. Variation in precise control increments can be achieved by use of available gear heads. Provides accurate shaft rotation without feedback or position pickoff to actuate counters, x-y plotters, potentiometers, transducers, switching mechanisms, and digital to analog and analog to digital converters. Shock-free magnetic detenting between pulses permits smooth no drift operation. Available from stock in frame sizes 8, 11, 13, 15, 17, 20, 23 with a wide variety of torque, inertia, pinion, siz ance specifications with 2ø or permanent magnet rotors. De applicable paragraphs of MIL M-7969, and MIL-E-5400. double shielded and life lu are stainless steel or alumi tion; class H insulation stan rated at 28 V DC. Custom to specification.

*Measured with motor windings at 25°C, and with specified ADC controller at 28 VDC.

NOTES: 1. These data are for reference purposes only and are typical values.

2. The recommended motor case operating temperature range is −55°C to +185°C. The +185° maximum may be exceeded but bearing life will be shortened.

3. With typical mounting, a temperature rise of approx. 65°C above 25°C ambient can be expected. Heat radiators are available to reduce temperature rise.

4. For winding temperatures greater than 25°C, derate torque at 0. and stepping speed at 0.2%/degree C.

5. Inertia load decreases stepping rate. For inertia loads less th rotor inertia, derate no-load speed by the factor $\sqrt{\frac{\text{Rotor Inertia}}{\text{Rotor + Load}}}$

6. Gearheads are available for above motors.

STEPCON® GEARMOTORS†

Gear Motors—The STEPCON® Size 13 and 17 Gearmotors have been designed to provide an economical stepping motor/gearhead package which makes no compromise as regards performance or long life. Over 500 different ratios are available from stock in the range from 3/1 to over 800,000/1. Standard backlash is less than ±45 min. with a 2 in. oz. reversing load. Maximum static load is 150 in. oz., and maximum running load is 75 in. oz. The size 13 STEPCON® Gearhead can be adapted to either size 11 or size 15 motors on special order.

1. Nominal value based on 1 μsec rise time.
2. Step angle selection determined by logic level input to controller during operation.

Stepcon® Controller—Required for use with stepping motors to obtain specified performance. Contains reliable solid-state transistor circuitry to accept pulse inputs from computer, tape, pulse-generating module, or other programmers. Determines sequential order of motor coil currents in response to input pulses, and provides magnetic detenting between pulses. Packaged in MIL-T-27A cans or plug-in printed circuit cards designed to meet applicable MIL-E-5272, MIL-E-4158, and MIL-E-5400 requirements. Power Requirements: All units rated at 28 ±5 VDC. Input Pulse Requirements: Amplitude: Positive going transition equal to at least 60% and no more than 100% of the controller supply voltage with a rise time of 1 μsec. or less. Pulse Width: Greater than 15 μsec. Controllers of the two half phase type provide simplified switching circuits and minimum cost. Full phase type controller more efficient motor operation a higher cost. Pulse adaptor circu able to accept most any type of switching function. Controllers from stock, or to customer speci meet a wide variety of applicatio

DIGITAL CONTROL EQUIPMENT

plete line of digital equipment building blocks compatible with ADC motors and controllers, allowing customer formulation of control systems to his unique requirements.

gle Pulse Generator—This exactly one pulse per push n, with characteristics to C controller requirements: pulse equal to unit supply -1.8V with a rise time of a compatable pulse width. C input. Mounts in 5/8″ dia to 3/16″ thick. A companion 7A Switch Adapter supplies hen activated by an external osure. This unit is particu- masking contact-bounce in- witches, snap action switches, or such mechanical switches, false counts.

Model 1516A Gated Pulse Generator—This unit converts a single input pulse to a specified number of output pulses delivered at a specified rate. Pulse output characteristics match the ADC controller requirements: Positive going pulse equal to unit supply voltage +0V, —1.8V with a rise time of 1 μsec max and a pulse width of 15 to 75 μsec. Number of pulses out are variable from 0 to 256. Frequency range is variable within each of eleven standard ranges from .08 to 1600 Hz. Input pulse requirements: Amplitude positive going transition between 60% and 100% of the unit supply voltage with a rise time of 1 μsec max and a pulse width greater than 15 μsec. Unit rated at 28 ±5 VDC, 150 ma.

Model 576A and 1502A Pulse Generators—These units supply a string of pulses with output characteristics which match the ADC Controller requirements: Positive going pulse equal to unit supply voltage +0V, —1.8V with a rise time of 1 μsec max and a pulse width of 15 to 75 μsec. Frequency range is variable within each of eleven standard ranges from 0.8 to 1600 Hz. Pulse current output, 60 ma. Provision for controlling pulse rate remotely or inhibiting the pulse output are included. Supply voltage, 28± 5VDC. The 576A is card mounted and has a maximum operating temperature rating of 70°C, while the 1502A is mounted in a hermetically sealed can and has a maximum operating temperature of 125°C.

575A Analog to Pulse Rate Converter—Converts bi-polar analog input voltage to bi-directional pulse rate output which is compatible with ADC's Stepcon® Controllers. By adding a potentiometer to the stepper-motor shaft, a position servo can also be accomplished. The 575A can provide both angular position and step rate servo control, thus also accomplishing a DC motor function.

Digit Servo Comparator Series—DC alog voltage corresponding to put shaft position. Using a en potentiometer to supply ge, corresponding to the actual the 555A provides pulses to ontroller to drive the error hull. These pulses, which are nversion of the analog input, used to drive the Stepcon® emote location or used for data

Model 254A Series Power Saver—These units automatically reduce power delivered to a stepping motor during non-stepping periods where full magnetic detent is not essential and minimum total power dissipation is required. Power Savers may be used in conjunction with 048, 049, 062, 065, 066, 071 or 073 Controllers and their power supplies. Input requirements are compatible with ADC pulse generator outputs. The 254A-2 Power Saver delivers full power to the motor during the stepping period and reduces to an adjustable level of 3% to 70% during the non-stepping period. Hold-time, the period between removal of the stepping pulse and reduction to the standby level, is adjustable between 15 and 500 msec. The 254A-2M1 Power Saver is identical except the standby level is zero only.

Model 1603A Stepcon® Driven Digital Counter—This unit provides readout on four or five digit wheels bi-directionally (addition or subtraction) at rates of 150 counts/second. Out-performs existing electro-mechanical and relay-operated devices. One pulse into controller advances last digit wheel one digit. Counter has mechanical reset, and each digit wheel can be set by hand to a predetermined number.

Model 1875A Remote Control Metering Valve—A high quality metering valve, driven by a Stepcon® PM Stepping motor and particularly suited to the precise low flow requirements of analytical instrumentation, chromatography, semiconductor processing or other similar process control, laboratory or industrial applications. Use of precision needle valves assures proportional and precise flow at any setting. Brass or stainless steel valve bodies and interchangeable tube, pipe, and hose fittings available. With suitable ADC modules may be operated by either digital input, analog input, or simple switch closure. Custom units available to specification.

CONTROL SYSTEMS CAPABILITIES

ADC can provide complete on-the-shelf, or custom designed control systems to your requirements.

a Digital To Synchro-Analog System—Converter system ac- of 12-bit parallel binary input strobe signals. These parallel its are converted to syncho posi- an overall RMS error of 0.12°. is accomplished by means of ontroller and Motor drives. The 8B Digital to Analog Converter sists of two Model 110A single erters, one Model 110B dual out- onter and a Model 214A Power ck Generator. The 110A Contains ingle synchro digital to analog e., the encoder is driven through path to null and may go through 110B contains a linear 2-speed verter, i.e., the encoder is driven e shortest path to null and may ough zero.

833A Attenuator Remote Control System—Control system is designed to provide accurate, stable attenuation settings from 0 to 50 db when operated in conjunction with the Hewlett-Packard Model X382A Variable "X" Band Microwave Attenuator or equivalent. Digital-type control system provides a more accurate and reliable means of remote setting microwave attenuators without problems of stability and gain inherent in conventional servo systems. The Attenuator can be easily and accurately tuned or set at the Attenuator itself, or from the Master Controller, or from any Remote Controller Station. The Attenuator can be set to provide the desired attenuation in repetitive control increments of 0.5° (Average attenuation increment of 0.03 db) over the full range of 0 to 50 db. Power Required: 115V Single Phase, 100 Watt, 60 cps, AC.

Model 334A Automatic Resistance Tester—This equipment is representative of ADC's ability to custom design and produce automated test equipment for industry. It will test flash-cube lamps, twelve at a time, checking within specified limits at low resistance level without firing the lamps. If a lamp is out of limit, an appropriate indication is made and the automated test sequencing is halted until the lamp is rejected or an override is initiated. The entire cycle is completed in less than 2 seconds for all twelve lamps.

Traffic Analysis and Control Systems—Utilizing the latest in solid state circuitry, these systems offer improved factors of size, efficiency, accuracy and dependability to traffic engineering and maintenance personnel. Traffic Analyzers can be provided to offer continuously visible indications of vehicle count into and out of a test lane as well as differential count and vehicle-second occupancy accumulation. Automatic print-out is also available. Control Systems, designed to the specific application, can include electronic dial units, tone actuated encoders, master synchronizers, multiple background program cycles, and complex program timing and switching, all compatible with manual, preset, direct line, radio link and computer actuations.

Bodine offers a complete line of fractional hp motors, gearmotors and speed controls

SPEED CONTROLS for Adjustable Speed Drive

A Bodine SCR-type sp trol (chassis or encas verts 50/60 Hz A-c pure D-c for shunt-woun Makes possible smooth control of a Bodine driv or gearmotor) over a wi of speeds. For single s sponsibility and maxim formance, insist on a matched Bodine motor control system. A wide in the 1/50 to 1/4 Hp available.

The Bodine line, within its horsepower range, is unusually complete. There are over 3500 standard motors and gearmotors, with horsepower ranging from 1/2000 to 1/4. Bodine also builds custom and special motors to your design requirements. Our engineers will be happy to help you pinpoint the right one for your specific application need.

Encased Controls: Nine models are stocked. Some with extended speed range and/or torque control.

Chassis Control Kits models stocked. Un adaptability. Install in y enclosure.

FHP MOTORS & GEARMOTORS:

Since 1905 Bodine has manufactured fractional horsepower motors and gearmotors. Close tolerance machining and careful attention to even the smallest detail of construction enables Bodine not only to produce better motors, but to produce them at a lower cost to customers in terms of value received. STOCK Bodine motors and gearmotors are available in all types and sizes within a range of 1/2000 to 1/4 Hp; torques from 0.3 Oz-in. to well over 200 Lb-in.

Type N Motors: Three basic sizes; 3.36", 4.50" and 5.68" in diameter. Stock ratings from 1/125 to 1/4 Hp. Almost any type of winding.

Type K Motors: Permanent-split capacitor instrument motors. Normal slip, high slip and synchronous windings. Stock ratings to 2.4 Oz-in. Only 2.405" square.

Type K Gearmotors: nent-split capacitor in gearmotors. Parallel sh cal gears. Stock ratings Oz-in. at 300-0.9 Rpm 2.405" square.

N-1D Gearmotors: Parallel shaft helical and spur gearing. Ratings to 25 Lb-in. Ratios to 900:1. Only 3.41" square.

N-1R . . . single or double reduction worm gearmotors. Stock ratings to 5 Lb-in. range. Many ratios.

N-1RG . . . double reduction worm gearmotors. Stock ratings to 40 Lb-in. range. Many ratios.

Single reduction, right worm gearmotors. 5 fram with stock ratings to 70 range. Ratios to 60:1.

N-3RJ . . . double reduction right angle worm gearmotors for transmitting high torques at low speeds. Stock ratings over 200 Lb-in.

N-5RH . . . single reduction right angle worm gearmotors. Heavy duty reducer for continuous driving of heavy loads. Ample reserve for overloads. Stock ratings over 200 Lb-in.

ecision Rotating Components

VO MOTORS

has long been a leader in the manufacture cision servo motors and motor tachometers fers a complete line of sizes and types, both nd without gear heads. Machine winding her advanced production techniques along arge volume manufacture assure the most mical price available. At the same time, rigid lity testing and quality assurance programs p through years of experience guarantee the quality and dependability.

CHROS

r synchros are of uniformly high quality and ility. The quality is a result of advanced n concepts, modern manufacturing techniques aterials and meticulous care in assembly and g. Cedar Synchros are tested per MIL-S-3C and ARP-461B-SAE and are available in iety of windings and shaft configurations.

RVO PACKAGES

r servo packages have been successfully used ading missles and aircraft, ranging from the A7A autopilot synchronizer to the Polaris A3 sum-to-analog converter. Other Cedar pack- include integrators, in-line servos, geared as- lies and custom units.

PPER MOTORS

use their output is in discrete increments, r stepper motors have many advantages over ntional motors for precise positioning appli- ns. They are bi-directional and have high ue output. They can be run at high stepping s or as slow as you wish. Because shaft rotation is incremental, damping is not required. Cedar Stepper Motors are available in both permanent magnet and variable reluctance types, and with a wide variety of stepping angles. All meet the full requirements of MIL-E-5272.

DC LOW INERTIA MOTORS

Cedar proprietary manufacturing techniques produce DC low inertia motors that match or exceed printed circuit motor performance, at lower cost. The motors are designed to power computer peripheral equipment, control systems, business machines or any application requiring fast acceleration and deceleration.

SUBMINIATURE RATE GYROS

Cedar's high performance rate gyros have been designed for stability augmentation systems, autopilot damping, radar antenna stabilization and fire control applications. Two and three axes rate gyro packages can also be provided to include demodulators, amplifiers, phase splitting capacitors, chokes, etc., as required.

AC MOTORS • MOTOR TACHS • MOTOR GEARHEADS • RESOLVERS • STEPPER DRIVE CIRCUITS • ROTARY SOLENOIDS • DC TORQUERS • DIGITAL INDICATORS • DC HI PERFORMANCE MOTORS • ACCELEROMETERS • LVDT's • SYNCHRONOUS HYSTERESIS MOTORS

STEPPER MOTORS

BUY CLIFTON QUALITY IN SERVO MOTORS

STEPPER MOTORS

Clifton offers a wide variety of permanent magnet or variable reluctance type stepper motors in sizes 8 through 15.

We also design and manufacture the logic and pulse source modules which control our stepper motors.

Stepper motors are extremely useful where signals are presented as pulse trains rather than analog voltages.

AC MOTORS, GENERATOS AND TACHOMETERS

Clifton offers a wide variety of AC motors in size 15. Our motors exhibit a very high degree of effi higher torque to inertia ratios and lower and mo starting voltages. All motors are high temperatur

Because of higher torque/inertia ratios, our and tachs are smaller and lighter.

Clifton also offers temperature compensated tachs and high signal to noise integrating type heads available on motors and tachometers.

TORQUERS

Clifton can custom design torque motors to your special need. Our deep experience in the flat, "hollow shaft" configuration qualifies us uniquely in this field. A Clifton torque motor actuates the fins on Redeye, the Army ground to air missile.

1" CUBE DC MOTOR

Save space and weight with this 1" cube DC Motor which delivers the torque of units twice its size. Peak torque is 7.5 oz-in and torque sensitivity 5.3 oz-in/amp.

DC MOTOR

Clifton offers many differen cluding a new line of low co 9, and 13.

Units are available which ac 28, 20 or 14 volt inputs; governor which maintains speed within ±1%. Gearhe able for our DC motors. DC ta also available.

AND SYNCHROS

BRUSHLESS SYNCHROS

For synchro applications where conventional commutation—slip rings and brushes—is either undesirable or unwanted, Clifton had developed several varieties of brushless synchros, for both full and limited rotation.

ELECTROMAGNETIC TYPE. In the electromagnetic brushless synchro, energy is transferred from the rotor by means of a circular transformer mounted at the rear of the unit. There are no physical connections to the rotor; hence, the life of the unit is solely limited by the life of the bearings.

HAIRSPRING TYPE. Limited rotation units are made with spirally wound conductors used to pick off information from the rotor. These hairspring conductors allow a rotation of as much as ±165° from the electrical zero position. The advantage is that any standard synchro can be manufactured in a hairspri with no change in electrical parameters.

To discuss the use of either type of unit in your application, contact your lo Sales Office.

CLIFTON
DIVISION OF LITTON INDUSTRIES

SEE SECTION 4900, page 1987 for a description of our wide line of Flight Instrumentation & Control Sub-Assemblies, Electronic Modules, Digital Indicators and A/D, D/A Converters.

GYRO PICKOFF SYNCHROS AND RESOLVERS

Gyro pick-offs generally require individual mounting configurations and electrical parameters. Clifton can custom design them for your particular needs. Beryllium, aluminum or stainless steel housings. A wide selection of bores, stack heights, widths and diameters are available from existing laminations. Our gyro pick-offs are used extensively in the Apollo program.

Custom designed torque motors also available.

SYNCHROS

Clifton synchros offer high accuracy (7′ max. error is typi nulls, low phase shifts, corrosion resistant construction, steel or aluminum housings. Double ended shafts, BuWeps ultra high temperature resistant types (450°F) are availabl manufactures an extremely wide variety of transmitters, r control transformers, differentials, resolvers, precision c resolvers. linear transformers, as well as a complete line and motor rate tachometers.

DALE® for Optimum Value in Electromechanical Products

VERSIBLE AC MOTOR DRIVEN POTENTIOMETERS

FOR USE IN ■ Home Entertainment Appliances ■ Instrumentation ■ Controls

FEATURES

■ Available with all standard potentiometer. Single, ganged or with power switch-dimensions change accordingly.

■ Magnetic clutch eliminates coasting and allows manual control independent of gearmotor inertial load.

■ Long life expectancy ■ No lubrication in normal use ■ Operates in any position ■ Special terminal configurations available

SPECIFICATIONS

Operating Voltage: 6, 12, 24, 117 V.A.C., or any specified

Power Input: 7.5 Volt Amperes

Output: Approximately 5.6 R.P.M.

Torque at Potentiometer Shaft: 10 in./oz. minimum (with decoupler); 21 in./oz. minimum (without decoupler).

Reversing: Accomplished by switching capacitor as shown in hysteresis motor circuit diagram below.

Dimensions: Length: 3.275" (not including shaft) Diameter: 1.531

VERSIBLE AC GEARHEAD MOTORS

FOR USE WITH ■ Switches ■ Potentiometers ■ Projectors ■ Turret Drives ■ Room Drives ■ Chart Drives ■ Turntable Drives ■ Business Machines ■ Displays ■ Light industrial and consumer product controls

SPECIFICATIONS

MECHANICAL

Overall Dimensions: Length: 3.275" (not including shaft) Diameter: 1.320"

Shipping Weight: .32 lbs.

Will meet normal industrial environmental requirements.

Mounting: Horizontal standard, vertical optional; bracket provided for chassis mounting and mounting control.

Output Torque: 14 in./oz. at 5.3 and 1.8 R.P.M.

ELECTRICAL

Operating Voltage: 117 volts AC, 60 cycles standard. Available from 6 to 220 volts AC, 60 cycles. D.C. versions available.

Capacitor size: Dependent on input voltage. (Capacitor not part of motor.)

VERSIBLE AC HYSTERESIS SYNCHRONOUS MOTORS

FOR USE IN ■ Low Power Driving Mechanisms ■ Control Circuits ■ Timers ■ Fans ■ Entertainment Appliances ■ Scanning Devices ■ Stirring Devices ■ Cassette Drives

FEATURES

■ Output shaft configuration can be specified. Standard units provided with gear.

■ Mounting arrangement can be varied to meet customer requirements.

■ Self-lubricating bearings.

■ Aluminum housing.

■ Long life expectancy.

■ Reversing accomplished by switching external capacitor as shown in circuit diagram.

SPECIFICATIONS

Operating Voltage: 6, 12, 117 V.A.C., or any specified.

Power Input: 7.5 Volt Amperes

Output: Approximately 1800 R.P.M.

Torque: 0.1 in./oz. min. — no load

CIRCUIT DIAGRAM

E VOLTAGE	C CAPACITANCE	C VOLTAGE
6	170 MFD	20
12	50 MFD	25
24	16 MFD	50
117	.68 MFD	300

DC STEPPING RELAYS

FOR USE IN ■ Control Circuits ■ Television Controls ■ Hi-Fi, Stereo & Radio ■ Appliances ■ Telephone Devices ■ Coin Machines ■ Car Washes ■ Crystal Switching ■ Copy Machines ■ Medical Electronics ■ Computers ■ Coin-operated Laundry Equipment ■ Programmers

FOUR TYPES AVAILABLE ■ Uni-Directional A.C. & D.C. ■ Bi-Directional A.C. and D.C.

SPECIFICATIONS

ELECTRICAL

Operating Voltage: 6 V, 12 V, 24 V, 117 V (AC or DC)

Power Required: 2.5 watts with Plate Sequence Switch (Fig. A); 4.5 watts with Wafer Sequence Switch (Fig. B).

Contact Arrangement: Single Pole 4, 6, 10, 12 or 13 throw sequence. Auxiliary power switch operates at predetermined position of sequence.

Contact Rating: From Dry Circuit to 1 amp at 24 V.A.C. on Sequence Switch. Optional power switch 5 amps at 117 V.A.C.

MECHANICAL

Overall Dimensions: Height: 2.200" Width: 2.190" Depth: 2.005"

Shipping Weight: 0.27 lbs. Uni-Directional; 0.40 lbs. Bi-Directional

Will meet normal commercial environmental requirements. Standard auxiliary power switch may be omitted.

Mounting: Vertical or horizontal using one screw and two locating tabs.

MINIATURE MAGNETIC CLUTCHES • CLUTCH BRAKES • BRAKES

FEATURING—

- ★ Torque range to 100 inch/ounces
- ★ Friction or crown-tooth clutch faces
- ★ Direct action and reverse action types
- ★ Engagement time—3 to 20 milliseconds
- ★ 24-28 Volts, D.C. standard. No delay penalties for special voltages or special shaft configurations.
- ★ Precision ball bearings used throughout
- ★ Designed to meet MIL-E-5272A environmental specifications

GEAR HEAD AND SPEED REDUCERS

Sizes 8, 10, 11, 15 & 18

FEATURING—

- ★ Precision ball bearings throughout
- ★ Hardened stainless Class II precision gearing
- ★ Large selection of standard ratios. Special exact ratios for timing systems available
- ★ Integral safety slip clutch. Eccentric output shafts, pinion or special output shafts available.
- ★ Special frame sizes, adapters for all non-standard motors

HOLLOW AND SOLID SHAFT PRECISION DIFFERENTIALS

All Sizes to 1/16 Shaft Dia.

FEATURING—

- ★ High accuracy and long life
- ★ Precision ball bearings used throughout
- ★ Hardened stainless steel gearing. Choice of end gears to order
- ★ Simple pinion gear adjustment for desired backlash vs. starting torque
- ★ Zerol 3-bevel, extremely rugged high torque models available
- ★ Sub-miniature 3/32 enclosed planetary type available

FANS AND BLOWERS

precision air moving device is no better than the basic motor that supplies its rotary motion. Long experience in custom design of motors for specific applications coupled with our extensive aerodynamic and environmental test facilities assures you of an optimum balance of size, weight and power frame to produce maximum air delivery. The same thorough engineering, precision workmanship and painstaking quality control which have been responsible for our long standing reputation for absolute dependability combine to produce the highest reliability available for this class of component.

PROPELLER AND TUBEAXIAL FANS

UP to 12" in diameter, up to 1500 CFM.

VENEAXIAL FANS

Available in 1½", 2", 4¾" diameters from 3 to 500 CFM at high static pressures.

CENTRIFUGAL BLOWERS

A complete line from 3 to 2000 CFM, static pressures up to 10 inches of water.

PRECISION CONTROL COMPONENTS

MILITARY & COMMERCIAL SERVOMOTORS

Sizes 8, 10, 11, 15, 18 and 23. Available for 60 or 400 Hz operation with wide selection of standard gearhead ratios.

SERVOMOTOR-GENERATORS

Includes temperature compensated integrating tachometers where required. Standard sizes 8 through 23 with and without gearheads. Also available as tachometer only, up to size 8.

INERTIALLY DAMPED SERVOMOTORS

Available with and without gearheads in sizes 8 through 23. Permanent magnet alternators for both military and industrial applications.

Eastern Air Devices has been manufacturing high performance control components in volume production quantities since 1942. Experience gained through serving the exacting requirements of the military and many of the country's leading instrument companies has resulted in an intimate familiarity with production tolerances and quality assurance procedures so necessary to consistently produce components of the highest quality available.

A thorough knowledge of basic application factors has enabled EAD engineers to design and produce a series of standard components capable of optimum output consistent with the high reliability for which EAD is famous. Where special requirements exist, our engineering department has the capability of relating and adapting a vast store of empiracal data to your particular needs.

CHARACTERISTICS

RINGS: Coin Silver 5 AMP ring.
Copper 50 AMP ring.

BRUSHES: Silver Graphite.
Fabricast Grade FAG 180 (80% AG — 20% C
Two brushes per ring.
Brushes individually removable and replacea

NOISE: 10 Milliohms dynamic resistance MAX.
5 Milliohms MAX with 4 brushes per CKT.

CURRENT: Noted in tabulated block.
Rating may be doubled with 4 brushes per C

HI-POT: 1200 VAC 60 CYCLE for 15 seconds.

ROTOR: One piece steel sleeve
Ring complement vacuum cast on sleeve as
with epoxy dielectric.

LEADS: 5 AMP Leads — 20 GA. per MIL-W-16878 TY
50 AMP Leads — 8 GA. per MIL-W-16878 TY

HOUSING: Bell, Bell Spacer and Cover type construction

COVER: Easily removable for brush and ring inspecti

BEARINGS: Shielded or sealed ball bearings.

CUSTOM SLIP RING CAPABILITY

CUSTOM 7000 AMP SLIP RING ASSEMBLY

This slip ring assembly, as designed and manufactured by Fabricast, Inc., is used to supply 7000 amperes of current to the rotating mandrel of the world's second largest spin forging machine.

CUSTOM 222 TRACK SLIP RING ASSEMBLY

This slip ring assembly, as designed and manufactured by Fabricast, Inc. was used to complete the electrical circuits to the rotating arm of an astronaut carrying centrifuge.

The unit consists of 50 amp. power, 5 amp. instrumentation and 50 megacycle coaxial modules.

SPECIALTY MOTORS

NEW! Cooling-fan Assemblies

For Electronic-equipment Cabinets

New 100 CFM fan assembly is powered by reliable GE shaded-pole motor and is equipped with a durable, five-blade molded fan and brackets. The two-pole Unitized® motor features a recirculating oil lubrication system for extra long bearing life. The assembly is only 2⅞ inches deep from mounting plate to end of motor, and measures slightly under 4¾ inchs square with mounting holes 4⅛ inches between centers.

500 CFM fan assembly is powered by GE unit-bearing, four-pole, shaded-pole motor with recirculating oil lubrication system, and includes five-blade metal fan and grill. Measuring less than 6¼ inches deep from front to back, it has a ten-inch diameter fan venturi with eight holes around venturi flange for easy mounting. Also available with two-pole motors for even greater air-flow.

The units, which require only simple ON-OFF switches for operation, are designed for years of quiet, dependable, continuous-duty operation without maintenance. These blowers are available for 115- or 230-volt, 60-cycle duty. 50-cycle designs are available with somewhat lower output. For complete information, write for Bulletin GEA-8258.

100 CFM fan assemblies

500 CFM fan assemblies

NEW . . . ADVANCED

Hyper-Servo* MOTORS for electronic drives

For such demanding computer applications as single-capstan tape transports, disc pa speed printers, card sorters and card readers, General Electric has created this ne high performance d-c servo motors. The motors respond in less than one millisecond wi ation rates faster than any motor previously offered by General Electric. Write for Bulletin Characteristics: Torque-to-inertia ratio approaches one-half million rad/sec²; pulse torqu ratio exceeds one-half million rad/sec²; inertial time constant is as low as one millisecond is 3.4 inches and larger; weight is as little as five pounds.

* Trade-mark of the General Electric Company.

Reel Drive Motors

For Computer Tape Transports

GE's full line of fhp direct-current motors includes four frame sizes widely used for reel drives: 3⁵⁄₁₆″, 3¹³⁄₁₆″, 4⅝″, and 6⁵⁄₁₆″ diameters. Special end mountings and shaft extensions meet exacting application requirements. Series, split-series, compound, shunt, and compensated-shunt winding designs offer a broad design choice. Stall torque ratings from 3 to 120 ounce-feet and higher span various application needs, and motor voltage requirements are normally matched to your system design. Write for Bulletin GEC-1795.

SYNCHRONOUS, REVERSIBLE

Low-speed Gearless Servo Motors

For servo, stepping, and other low-speed high-torque applications, General Electric provic of low-speed, synchronous inductor motors in 4⅛-inch diameter models. These motors choice of 50, 75, 150, or 250 oz. in. torque at exactly 75 rpm without the use of spee devices. The motors provide fast starting, stopping, and reversing for 50- or 60-cycle ap at either 120 or 240 volts. For complete information write for Bulletin GEC-1294.

Small, Compact, A-c Induction Motors

Provide High Power in a Lightweight Package

Small in size, but high in reliability, General Electric compact, powerful, a-c induction motors are available in four sizes from 15 mhp to ½ horsepower. These reversible motors provide consistent, quiet, long-life operation in any mounting position. Synchronous motors for constant-speed applications are available in 3-, 3.4-, and 3⅞-inch diameter models. Special designs can be provided for various torque motor applications such as tape reel drives. For dimensions, features, ratings, and application information, write for Bulletin GEA-8254.

Typical Electronic Applications: Computer memory drums, tape reels, capstans, disc filers, card stackers, card printers, card punchers, and data cells.

For complete information contact nearest GE Sales Office listed on inside front cover, or write to General Electric Co., Section 998-88, Schenectady, N. Y. 12305.

ERMANENT MAGNET MOTORS

VS (Bulletin A-0700N)

CW rotation viewed from shaft end when positive voltage is connected to red (+) terminal and negative voltage is connected to black (−) terminal. For CCW rotation reverse voltage at terminals.

Be sure to check Globe for latest data prior to preparing spec control prints.

Outstanding feature of Globe Type VS d.c. motors is the unusually compact and versatile configuration. The size and shape make them where space and weight are paramount.

Details for a Globe engineering recommendation.

rating: 1/400 hp. 8,000 to 17,000 rpm continuous duty. Higher and lower speeds available at reduced hp.
voltage: 12 to 50 v.d.c.
weight: 1.7 oz.
armature: Impregnated with fungus resistant varnish. Inertia: 1.32 gm. cm.^{2}
protection: Protected against shock, water, dust, and other environmental hazards.
magnet: Alnico V.
bearings: Double-shielded ball bearings life-lubricated.
frame: Machined aluminum housing and metal end cap form frame structure.
shaft: Precision ground #420 stainless steel shaft through hardened to Rc 45-50.
electrical connections: Solder terminals provided.
reversibility: Motor reverses when terminal voltage is reversed.
mounting: Standard mounting is by tapped holes in motor body.

ERMANENT MAGNET SPUR GEARMOTORS

VS (Bulletin A-0740N)

Type VS d.c. spur gearmotors provide high torque and reliability in an extremely compact package. The small size makes them ideal for applications where space and weight are paramount considerations. VS spur gearmotors are available with 15 ratios in the side shaft style. Units for operation at other voltages can be provided. Complete application data for a Globe recommendation.

Be sure to check Globe for latest data prior to preparing spec control prints.

rating: Up to 35 oz. in. at 10 rpm.
voltage: 12 to 50 v.d.c.
weight: 2.0 to 2.8 oz. max. depending upon ratio.
gears: Gears are precision manufactured and case hardened for maximum reliability.
backlash: 3° max.
protection: Protected against shock, water, dust, and other environmental hazards. Motor housing is aluminum. Geartrain housing is plastic.
bearings: Motor ball bearings are double-shielded, life-lubricated. Geartrain input shaft is supported on ball bearings; output shaft is supported by precision ground steel bushing.
lubrication: Motor and geartrain are life-lubricated.
shaft: One piece hardened stainless steel output gear and shaft.
electrical connection: Terminals are provided.
mounting: Mounting is by means of tapped holes in motor body.

MOR NO LOAD CURRENT

DU ORDER

Number. Complete part number consists of number shown in DA PART NUMBERS AND GEARMOTOR DATA chart, plus a number from the MOTOR PERFORMANCE AND DATA chart to mature winding. EXAMPLE: 128A171-7 has a 130.36:1 spur powered by a 12 v.d.c. motor with a no-load speed of 11,000 rpm. Consult Globe for information on units to operate at wer than 12 v.d.c.

**Shaft Rotation. Direction of rotation viewed from shaft end is as shown when red terminal is (+), black terminal (—). When red terminal is (—) and black terminal (+) rotation is in opposite direction.

Shafts. Special shaft lengths, smaller shaft diameters, flats, holes, pinions, threaded ends or tapped holes and tapers are available.

GLOBE TRW

D.C. PERMANENT MAGNET MOTORS

Type SD (Bulletin A-1200N)

Globe Type SD d.c. motors provide high torque and reliability from an extremely small size package. A variety of standard windings are available for different speed and torque characteristics. Units can be supplied for operation at other voltages and with radio noise filtering. Planetary geartrains provide a wide range of standard speed reduction ratios. For details see Type SD Planetary Gearmotor Bulletin A-1230N.

Please send complete application details for a Globe engineering recommendation.

WHEN YOU ORDER

***Part Number.** Units shown above are standard and may be ordered by part number. See introduction to this catalog section for assistance with selection of the proper unit to meet your requirements. Consult Globe for variations to suit specific applications.

Shafts. Special shaft lengths, smaller shaft diameters, flats, holes, pinions, gears, threaded ends, or tapped holes and tapers are available.

rating: 1/400 hp continuous duty at 8,000 to 18,000 rpm. H lower speeds are available with reduced hp. **voltage:** 6 to **weight:** 1.75 ounces. **armature:** Impregnated with fungus varnish. Inertia: 1.8 gm. cm². **protection:** Housing is iridited C-5511. **magnet:** Alnico V. **bearings:** Ball bearings are double life-lubricated. **frame:** Machined cylindrical aluminum hou end pieces form frame structure. **shaft:** Precision ground stai shaft through hardened to Rc 40-50. **end bell:** Precision mold **electrical connections:** Solder terminals are provided. re Motor reverses when terminal voltage is reversed. **mounting:** mounting is by means of servo clamps, or by pilot and tappe motor face.

(1) This is the maximum continuous output torque rating of a given geartrain. Actual output depends upon the armature winding selected. See Bulletin A-1200N, Type SD motors, for rated torque of various armatures.

(2) Maximum continuous output torque of the gearmotor is the product of the multiplication ratio times the rated torque of the motor as given below. This value must not exceed the maximum continuous torque given in the second column, above. Minimum efficiency of the geartrain is the product of the multiplication ratio divided by the speed ratio times 100.

This small size, light weight gear-motor is comprised of G Type SD motor, Bulletin A-1200N coupled with a precision gear train. The combination provides smooth, dependable per and maximum output torque in the smallest possible space. signed to provide a military quality gearmotor of exception pact size.

Nineteen different reduction ratios, ranging from 3.82:1 to are available. These subminiature Globe gearmotors are de meet the applicable environmental specifications of MIL-M-8

torque: Up to 300 oz. in. maximum continuous torque.
voltage: 6 to 50 v.d.c.
size: ¾" diameter.
weight: 4 to 9 oz., depending on ratio.
gears: Planetary gearing system. All gears are precision manu and heat-treated for consistently reliable performance and life.
backlash: Varies with ratio but will have less than 3°.
bearings: Output shaft is supported by two double-shielded, cated ball bearings.
electrical connection: Solder terminals are provided on open leads on enclosed type.
mounting: Unit is mounted by pilot and four holes in flange.

N YO ORDER

Num r. Complete part numbr consists of the standard part num- lus armature dash number. EXAMPLE: 41A119-1 is a 27 v.d.c., 0-15,0 rpm shielded motor with tapped hole mount and plain See e introduction to this catalog section for assistance with ing t proper unit to meet your requirements. Consult Globe for ions suit specific applications.

rating: 1/250 hp at 8,000 to 18,000 rpm continuous duty.
voltage: 6 to 50 v.d.c.
weight: 2 ounces.
armature: Impregnated with fungus resistant varnish. Inertia: 1.8 gm. cm².
protection: Housing is aluminum iridited per MIL-C-5541.
magnet: Alnico V.
bearings: Ball bearings are double-shielded, life-lubricated. Standard lubricant conforms to MIL-G-3278.
frame: Machined cylindrical aluminum housing and metal end cap form frame structure.
shaft: precision ground stainless steel shaft through hardened to Rc 40-50.
end bell: Metal end bell with molded plastic brush holder is standard.
electrical connections: Solder terminals are standard. Leads are optional. Shielded leads are available.
reversibility: Motor reverses when terminal voltage is reversed.
mounting: Standard mounting is by means of pilot and tapped holes in motor face, or by servo clamps to servo flange.

PERMANENT MAGNET PLANETARY GEARMOTORS

SS (Bulletin A-1430N)

Be s to check Globe for latest data prior to preparing spec. control prints.

This extremely small size and lightweight gearmotor consists of a Globe Type SS d.c. motor and a system of precision planetary gearing. The combination provids smooth, dependable performance and maximum output torque in the smallest possible space. The design has been predicated on maximum reliability.

Units are only 7/8" in diameter. Overall length ranges from 2 17/64", depending on speed reduction ratio. Twenty-one different standard reduction ratios, ranging from 3.82:1 to 36,873:1, are available.

These sub-miniature Globe gearmotors meet all applicable military specifications.

torque: Maximum continuous torque — to 300 oz. in. depending upon ratio.
voltage: 6 to 50 v.d.c.
size: 7/8" diameter.
weight: Gearmotor weighs 5 to 10 ounces depending upon reduction ratio.
gears: Planetary gearing system. All gears are precision manufactured and heat-treated for consistently reliable performance and life.
backlash: Varies with reduction but unit will have less than 3°.
protection: Housing is cadmium plated to conform to QQ-P-416 Type 2 for protection against moisture, fungus, and salt spray.
bearings: Output shaft is supported by two double-shielded ball bearings.
shaft: No. 416 stainless steel passivated per QQ-S-763.
electrical connection: Two teflon-coated #26 AWG leads on shielded type. Two solder type terminals on open type.
mounting: Unit is mounted by means of pilot and four holes in flange.

WHEN YOU ORDER

***Part Number.** Units described above are standard and may be ordered by part number. Complete part number consists of basic part number plus an armature dash number to designate armature voltage and speed.

GLOBE TRW

D.C. PERMANENT MAGNET MOTORS

Type JM (Bulletin A-1904N)

CCW rotation viewed from shaft end, when red lead is (+) and black lead is (−). For CW rotation reverse terminal voltage.

The outstanding feature of Type JM motors is an excellent voltage-speed characteristic that makes them ideal for use as control motors. A special frame design allows minimum slot-lock at low starting and running voltages.

All Type JM motors may be modified to include governors and geartrains. Type JM motors can be supplied with the same geartrains described in Bulletin A-2030N.

Please submit complete details of your application to Globe for an engineering recommendation.

rating: 1/65 hp, 6,000 to 12,000 rpm, continuous, higher speeds available.
voltage: 6 to 115 v.d.c.
weight: 5 ounces.
armature: Impregnated with fungus resistant varnish. Inertia: 11.1 gm. cm.²
protection: Housing is aluminum with iridite or cadmium plate/chromate finish per QQ-P-416 Type 2 for protection against moisture, fungus, shock, and salt spray.
magnet: Alnico V.
bearings: Ball bearings are double-shielded, life-lubricated. Standard lubricant conforms to MIL-G-3278.
frame: Metal end plate, end bell and pole pieces form structural frame. Enclosed construction is standard.
shaft: No. 420 stainless steel through-hardened to Rc 45-55 or higher.
end bell: Metal end bell is standard.
electrical connection: Two #22 AWG Teflon-coated lead wires per MIL-W-16878.
reversibility: Motor reverses when terminal voltage is reversed.
mounting: Tapped holes on motor face, or by non-magnetic clamping around motor diameter. Custom flange available.

Note: Be sure to check Globe for latest data prior to preparing spec. co

(EN TYPE

ENLOSED TYPE

CCW ROTATION VIEWED FROM SHAFT END WHEN RED LEAD OR TERMINAL MARKED (+) IS POSITIVE AND BLACK LEAD OR TERMINAL MARKED (—) IS NEGATIVE. FOR CW ROTATION REVERSE VOLTAGE AT LEADS OR TERMINALS.

Be sure check Globe for latest data prior to preparing spec. control prints.

's Typ LL motor is a permanent magnet d.c. motor designed to requi ments for missiles, aircraft, and other types of MIL-spec ment: t is also suitable for a variety of commercial/industrial ation where small size, reliability, and high torque are desired.

LL. mors are available in both open and enclosed types for tion voltages from 6 to 75 v.d.c. Units for operation at other es are easible.

tary artrains are available. See Bulletin A-2030N for details. comp te data for a Globe engineering recommendation.

: ½s continuous duty at 6,000 to 15,000 rpm. Higher speeds ble w reduced performance.

e: 6 75 v.d.c.

t: Op type — 5.2 ounces. Enclosed type — 6.5 ounces.

ture: cuum impregnated with fungus resistant varnish. Inertia: m. cm

ction: nclosed type has cadmium plated housing which con- to GP-416 Type 2.

ets: Alico V.

ngs: Dble shielded ball bearings life-lubricated.

: Po pieces are die-cast into aluminum frame by patented ique:

Pre on ground stainless steel through hardened to Rc 45-50.

ell: Pcision molded diallyl phthalate.

rical nnections: Open type — solder terminals. Enclosed type — ded ds.

sibili Motor reverses when terminal voltage is reversed.

ting: tandard mounting is by means of tapped holes in motor r no nagnetic clamping around motor diameter.

Glob Type MM d.c. motor is specifically designed for use in air- eqpment, missiles, and commercial applications where a inat of small size, reliability, and high torque is desired. se sel application details for a recommendation from Globe.

: 100 hp continuous duty at 8,000 to 18,000 rpm. Higher ds available with reduced performance.

ge: 4 to 50 v.d.c.

nt: Cn type — 3.5 ounces. Enclosed type — 5 ounces.

ture: Vacuum impregnated with fungus resistant varnish. Inertia: m. c.²

ction Enclosed type has cadmium plated housing to conform to 416 ype 2.

ets Inico V,

ngs ouble shielded ball bearings life-lubricated.

e: Fe pieces are die cast into aluminum frame by patented iqu

: Prision ground stainless steel through hardened to Rc 45-50.

ell: recision molded diallyl phthalate.

rica: connections: Open type — solder terminals. Enclosed type ield leads.

sibiy: Motor reverses when terminal voltage is reversed.

ntin Standard mounting is by means of tapped holes in motor not nagnetic clamping around motor diameter.

EN OU ORDER

k Nber. Units shown above are standard and may be ordered art mber. See the introduction to this catalog section for assist- wi selecting the proper unit to meet your requirements.

rqu For intermittent duty applications max. rated torque values be ceeded.

GLOBE TRW

D.C. PERMANENT MAGNET PLANETARY GEARMOTORS

Type MM & LL

(Bulletin A-2030N)

EARED FLANGE

SQUARE FLANGE

Globe's Type MM and LL planetary gearmotors provide t 1,000 oz. in. Gearmotors are 1¼" in diameter and are avai eared or square flanges as shown above. Over-all length ran 5" depending upon speed reduction ratio. Eighteen different ratios, from 18.78:1 to 21,808:1, are available. These comp gearmotors are designed to meet environmental portions f M-8609.

Please submit complete application details for a Globe en recommendation.

torque: Up to 1250 oz. in. maximum continuous torque.
voltage: 4 to 75 v.d.c.
size: 1¼" diameter. Length depends on reduction ratio.
weight: 6 to 14 ounces depending on ratio.
gears: Planetary gearing system. All gears are precision man and heat treated for consistently reliable performance and lo
backlash: Varies with reduction but average unit will have les
protection: Gearmotor housing is cadmium plated to confor P-416 Type 2 for protection against moisture, fungus and sal
bearings: Output shaft is supported by life-lubed ball bearings
shaft: Shaft is No. 416 precision ground stainless steel per heat treated. Shaft and last gear carrier are of one-piece co for maximum reliability.
electrical connection: Two shielded cables #22 AWG per Mil (NAVY) Type "E."
mounting: Standard flange — four through holes.

Note: Be sure to check Globe for latest data prior to preparing spec. control prints.

WHEN YOU ORDER

***Part Number.** Each of the basic motor windings (bottom chart) can be used with any of the gear ratios listed in the top chart. To order, state the gearmotor part number plus a motor winding dash number. EXAMPLE: 5A537-1 is an 18.78:1 MM gearmotor with a —1 armature winding, 24 volts, 17,500 rpm, 0.5 oz. in. torque, etc.

To Find Output Torque: maximum continuous output torq gearmotor is the product of motor torque times the torque r ratio. This figure is limited by the maximum continuous tor in the chart above.

**1/4" dia. shaft units limited to 600 oz. in. maximum continuous duty torque. Use 3/16" dia. shaft if torque requirements exceed this value.

Type CMM and CLL gear- s are rugged, high-quality com ing Type CMM and comm cial motors with a n pla tary geartrain offer- a stan ard speed reduction from 1 to 46,656:1 with num ntinuous torque up 50 oz n. These gearmotors sign for application where size reliability and high are esired.

Up 1250 oz. in continu- uty.

Th CMM — 4 to 50 Type LL — 6 to 75 v.d.c. 1¼" iameter. Length de- on r ratio chosen. 6 14 oz., depending on

gears: Planetary gearing system. All gears are precision manufactured and heat treated for consistently reliable performance and long life.
backlash: Varies with ratio, but average unit will have less than 3°.
protection: Open type motor is standard. Enclosed types can be provided.
bearings: Motor output shaft has life-lubed ball bearings; geartrain output shaft life-lubed sleeve bearing.
shaft: Standard shaft is precision-ground case-hardened steel.
electrical connection: Solder terminals.
mounting: Units are mounted by means of pilot and four holes in flange.

WHEN YOU ORDER

***Part Number.** Units described are standard and may be ordered by part number. Complete part number consists of the basic part number followed by the armature dash number. Consult Globe for other voltages and variations for special applications.

GLOBE TRW

D.C. PERMANENT MAGNET PLANETARY GEARMOTORS

Type BD & BL (Bulletin A-2430N)

Note: Be sure to check Globe for latest data prior to preparing spec. control prints.

Globe's 1½" diameter planetary geartrains provide high torque outputs in a small package. Coupled to the Globe Type BD or BL motor, they are ideal for business machinery, machine tools, aircraft, and missile applications.

Anti-friction bearings in each planetary gear stage result in efficiencies of over 90% per stage. Two geartrain sizes, 1⅞" Flange and 3" Flange, provide continuous duty output torques to 100 lb. in. and 550 lb. in. respectively.

These geartrains can also be integrally coupled with other Globe units, including a.c. and universal motors. Consult Globe for an engineering recommendation to meet your requirements.

rating: To 550 lb. in. continuous duty. To 1,100 lb. in. intermittent duty.
voltage: 6 to 115 v.d.c.
weight: Varies with motor and gear reduction ratio.
gears: Precision manufactured and heat treated for reliable performance and long life.
backlash: Varies with ratio, but maximum backlash is 3°.
protection: Motor housing is black anodized per MIL-A-8625 Type II. Unit is designed for protection against moisture, fungus, shock, and salt spray. Geartrain housing is protected by paint and irridite. Normal operating temperature range is —55°C to +85°C.
bearings: Anti-friction ball or roller bearings are used at every bearing location including all planet gears.
lubrication: Life-lubricated bearings and geartrains are standard. Consult Globe about special lubricants for temperature extremes.
shaft: Carbon steel shaft per QQ-S-624 with 18 tooth spline serrations per ASA B5. 15-1960 heat treated to Rc 45-48 (1⅞" flange) and Rc 29-33 (3" flange).
electrical connection: Double conductor shielded cable (#22 AWG) per MIL-W-16878 Type "E".
mounting: Four holes and pilot are standard.

WHEN YOU ORDER

***Part Number.** Complete part number consists of gearmotor ber from STANDARD PART NUMBERS table plus dash num BASIC MOTOR PERFORMANCE table to designate armature. E P/N 102A152-9 is a Type BD planetary gearmotor with 1 reduction ratio of 3.81:1; 27 v.d.c.; and a nominal no-load mo of 12,000 rpm.

Maximum Torque. Maximum intermittent torque is twice value. Momentary stall or impact torque should not exceed the rated value, or internal damage to the geartrain may res mum continuous output torque of the gearmotor is the prod motor torque times the torque multiplier ratio. This value by the maximum continuous torque.

ERMANENT MAGNET MOTORS

CMM & CLL (Bulletin A-2009N)

e sure check Globe for latest data prior to preparing spec. control prints.

e Type CMM & CLL motors are designed for applications which ire sm size, reliability and high torque. Planetary geartrains are lable in wide range of speed reductions. Bulletin E-2029N.

CMM CLL motors are commercial versions of Globe military ors and ave the same performance characteristics.

se sub t details to Globe for an engineering recommendation.

ng: CM 1/100 hp continuous duty, 8,000 to 18,000 rpm.
ng: CM 1/100 hp continuous duty, 8,000 to 18,000 rpm. CLL: 1/65
continu s duty at 6,000 to 15,000 rpm. Higher speeds available
reduc performance.
age: 4 75 v.d.c.
ght: CM 3.5 oz. CLL: 5.2 oz.
ature: cuum impregnated with fungus-resistant varnish.
nets: ico V
ings: uble-shielded, life-lubricated ball bearings.
me: Po pieces are die-cast into aluminum frame by patented
ess.
ft: Pre ion ground stainless steel.
bell: R cision molded diallyl phthalate.
trical nnection: Solder terminals.
ersibil Motors reverse when terminal voltage is reversed.
unting: ounting can be made by tapped holes on front face or with
-magn c clamp around motor.

EN YU ORDER

ype BD (Bulletin A-2400N)

te: Be e to check Globe for latest data prior to preparing spec. control prints.

tobe The BD d.c. motors are designed to missile and aircraft stand-
rds. Se n standard armature windings provide a large number of
eed a torque characteristics in a comprehensive range of voltages.
adio n e shielding is provided by the motor design, and filters can
e supp d to meet the requirements of MIL-I-26600. For gearmotor
ata see ype BD Planetary Gearmotor Bulletin A-2430N.
lease omit complete details of your application for an engineering
ecomm dation.

ating: hp at 7,500 to 12,000 rpm continuous duty.
oltage: to 115 v.d.c.
eight: oz.
rmatu Vacuum impregnated with fungus resistant varnish. Inertia:
.4 gm.²

HEN OU ORDER

Part N ber. The above units are standard and may be ordered by
part nu er. See the introduction to this catalog section for assistance
with se ting the proper unit to meet your requirements.

protection: Cover is aluminum per QQ-A-411, black anodized per MIL-A-8625 Type II for protection against moisture, fungus, shock, and salt spray.
magnet: Alnico V.
bearings: Double-shielded ball bearings life-lubricated per MIL-G-3278.
frame: Pole pieces are die cast into aluminum frame by patented process.
shaft: Precision ground #420 stainless steel through hardened to Rc 45-50.
end bell: Metal end bell with molded plastic brush holder is standard. Iridited per MIL-C-5541.
electrical connections: Two shielded 8" leads.
reversibility: Motor reverses when lead voltage is reversed.
mounting: Standard mounting is by means of pilot and tapped holes on motor face, or by non-magnetic clamping around motor diameter.

GLOBE TRW

D.C. PERMANENT MAGNET MOTORS

Type BL (Bulletin A-2406N)

Note: Be sure to check Globe for latest data prior to preparing spec. control prints.

Globe Type BL d.c. motors are designed to aircraft and missile quality standards. Six standard armature windings provide a large number of speed-torque characteristics at various voltages. Radio noise shielding is provided by the motor design, and filters can be supplied to meet the requirements of MIL-I-26600. For gearmotor data, see Type BL Planetary Gearmotor bulletin A-2430N.

Please send application details for a Globe recommendation.

WHEN YOU ORDER

***Part Number.** The above units are standard and may be ordered by part number. See the introduction to this catalog section for assistance with selecting the proper unit to meet your requirements. Consult Globe for variations to suit specific applications.

rating: 1/30 hp at 6,000 to 11,000 rpm continuous duty.
voltage: 6 to 115 v.d.c.
weight: 11.3 oz.
armature: Vacuum impregnated with fungus resistant varn 40 gm cm.²
protection: Cover is aluminum per QQ-A-411, black anodized 8625 Type II for protection against moisture, fungus, shoc spray.
magnet: Alnico V.
bearings: Double-shielded ball bearings life-lubricated per
frame: Pole pieces are die cast into aluminum frame b process.
shaft: Precision ground #420 stainless steel through hard 45-50.
end bell: Metal end bell with molded plastic brush holder i Iridited per MIL-C-5541.
electrical connections: Two shielded 8" leads.
reversibility: Motor reverses when lead voltage is reversed.
mounting: Standard mounting is by means of pilot and ta in motor face, or by non-magnetic clamping around motor

D.C. PERMANENT MAGNET MOTORS

Type GRP (Bulletin A-3600N)

Note: Be sure to check Globe for latest data prior to preparing spec. control prints.

Type GRP precision permanent magnet d.c. motors provide extremely high output, and are designed to meet appropriate MIL specs.

Various armature windings can be accommodated, making it possible to meet a wide range of speed and torque characteristics.

Wound field designs are available in this frame size for series, split series, shunt, split shunt or universal operation.

Please submit application details for an engineering recommendation.

rating: 1/12 hp, at 8,000 rpm, continuous duty.
voltage: 6 to 115 v.d.c.
weight: 2 lbs. 8 oz.
armature: Impregnated with fungus resistant varnish. In gm. cm.²
protection: Housing is cadmium plated to conform to QQ-P- for protection against moisture, fungus and salt spray.
magnets: Alnico V.
bearings: Ball bearings are double-shielded, life-lubricated lubricant conforms to MIL-G-3278. Special lubricants av temperature extremes.
frame: Pole pieces are die cast into aluminum frame b technique.
shaft: #420 stainless steel shaft is through-hardened to Rc centerless ground to finish of 5 microinches.
end bell: Metal end bell with plastic brush holders is standa end bell available for special applications.
electrical connection: Two 8" leads are provided.
reversibility: Motor reverses when terminal voltage is reverse
mounting: Standard mounting is by means of pilot and tappe front face, or by clamping around motor diameter with no clamp.

SC (Bulletin B-1702N)

Be sure check Globe for latest data prior to preparing spec. control prints.

Globe Type SC a.c. motors are available in many variations. Motors are wound a) three-phase, two or four pole or b) single-phase, two, four, or six pole. Type SC motors can meet a wide range of application requirements.

Type SC motors meet environmental portions of MIL-M-7969. Integral planetary geartrains are available.

Units for other voltages and frequencies also available. Please send complete details for a recommendation by Globe application engineers.

torque: .05 to .30 oz. in. (induction). .04 to .20 oz. in. (hysteresis synchronous).
voltage: 27 to 200 v.a.c., 60 and 400 Hz.
size: 1 1/16" diameter.
weight: 2.4 oz.
nominal rotor inertia: Hysteresis synchronous; 2 pole .99 GM CM²; 4 pole .7 GM CM²; 6 pole .7 GM CM². Induction: .95 GM CM².
protection: Housing and end plate are black anodized aluminum per MIL-A-8625. Unit is designed to meet applicable portions of MIL-M-7969 including environmental protection.
winding: HML insulated magnet wire is standard.
bearings: Stainless steel ball bearings are double-shielded, life lubricated. Standard lubricant conforms to MIL-G-23827. Special lubricants for extreme temperatures are available.
shaft: Shaft is No. 416 stainless steel, centerless ground.
electrical connection: #26 AWG Teflon-coated lead wires per MIL-W-16878 Type "E"; three or four leads are standard.
reversibility: Motor can be reversed by connecting leads per schematics.
mounting: Standard mounting is by means of pilot and tapped holes in front face.

SCHEMATIC WIRING

CW ROTATION (VIEWING SHAFT END). FOR CCW ROTATION REVERSE C & D.

ABC PHASE SEQUENCE FOR CW ROTATION (VIEWING SHAFT END). FOR CCW ROTATION REVERSE ANY TWO LEADS.

CW ROTATION VIEWED FROM SHAFT END. FOR CCW ROTATION REVERSE A AND B.

SINGLE PHASE ONLY. CAPACITOR A AND B FOR CW ROTATION VIEWED FROM SHAFT END, B TO C FOR CCW ROTATION.

WHEN YOU ORDER

Shafts. Special shaft lengths, smaller and larger shaft diameters, flats, holes, pinions, threaded ends or tapped holes and tapers are available on standard order. Standard pinions are available with any of these units. Call Globe for complete information.

Gearmotors. Type SC motors are available with integral planetary geartrains. Please consult the Type SC Planetary Gearmotor bulletin, or send application details for a Globe recommendation.

TRW A.C. HYSTERESIS SYNCHRONOUS AND INDUCTION PLANETARY GEARMOTORS

Type SC (Bulletin B-1732N)

This extremely small size and lightweight gearmotor consists of a precision planetary geartrain. The combination provides smooth, dependable performance and maximum output torque in the smallest possible space.

Type SC gearmotors are designed to meet military specifications, including high and low temperature and environmental protection.

Please send application details for a Globe recommendation.

torque: Maximum continuous torque to 300 oz. in. depending upon ratio.

voltage: 27, 115 or 200 v.a.c., 60 and 400 cycle.

size: Motor diameter: 1 1/16". Geartrain diameter: 7/8".

weight: Gearmotor weighs 6 to 11 ounces depending upon reduction ratio.

gears: Planetary gearing system. All gears are precision manufactured and heat-treated for consistently reliable performance and life.

backlash: Varies with reduction but average unit will have less than 3° backlash.

protection: Housing is black anodized for protection in accord with applicable portions of MIL-A-8625 (SG) Type II.

life: 1,000 hours at 12,000 rpm input at normal ratings.

bearings: Output shaft is supported by two double-shielded ball bearings.

lubrication: Life-lubricated. Standard grease used per MIL-G-23827 for temperatures from —55° to +85° C. For extreme temperatures, other lubricants available.

shaft: No. 416 stainless steel passivated per QQ-S-763.

electrical connection: Three or four wire leads are standard.

mounting: Unit is mounted by means of pilot and four holes in flange, or by clamp mounting.

Note: Be sure to creck Globe for latest data prior to preparing spec control prints.

ube Ty CMC motors are designed to meet requirements for ex-
mely c pact high-performance synchronous motors in high-quality
ustrial mmercial products. They are ideally suited to such appli-
ions as tating machines, recorders, business machines, industrial
ers, to , and controls.

que: 0 oz. in. at 3,600 rpm sync. 0.75 oz. in. at 1,800 rpm sync.
tage: 1 v.a.c., 60 cycle.
ght: 7 ounces.
or in rt: 6.5 gm. cm.²
tection Protected against dirt, moisture, shock, and vibration.
rings fe-lubricated, double-shielded ball bearings.
me: Th mosetting plastic.
ft: Pr sion-ground stainless steel.
ectrical nnection: Leads are provided.
versibility: Motor reverses by interchanging wires per schematics.
unting: Standard mounting is by means of pilot and tapped hole on
or face.

Thermosetting plastic encapsulation provides protection against shock and vibration and is impermeable to dirt and moisture.
Single phase operation requires a phasing capacitor (not furnished by Globe).
Send application details for a Globe recommendation.

GLOBE TRW A.C. HYSTERESIS SYNCHRONOUS PLANETARY GEARMOTORS — Type MC (Bulletin B-2032N)

EARED FLANGE

SQUARE FLANGE

These small, lightweight gearmotors consist of Globe Type MC hysteresis synchronous or induction motors and a precision planetary geartrain. Type MC planetary gearmotors are designed to meet all applicable MIL-specs including high and low temperature and complete environmental protection requirements.

Globe Type MC motors can be furnished with either synchronous or induction rotors and wound 60 or 400 cycles, 2, 4 or 6 poles. They may be operated single, or three phase.

Please send complete details for a Globe recommendation.

torque: Up to 1250 oz. in. continuous torque. **voltage:** 115 v.a.c., 60 and 400 Hz. 200 v.a.c., 400 Hz. **size:** 1/4" dia. Length depends on ratio. **weight:** Gearmotor weighs 9 to 12½ ounces depending on ratio. **gears:** Planetary gearing system. All gears are precision manufactured and heat treated for consistently reliable performance and long life. **backlash:** Varies with ratio but average unit will have less than 3°. **protection:** Housing is black anodized per MIL-A-8625 to provide protection against moisture, fungus and salt spray. **bearings:** Output shaft is supported by two life-lubed ball bearings. **lubrication:** Units are life-lubricated. Standard lubricant used per MIL-G-7118 (geartrain) and MIL-G-3278 (motor) for temperatures from —55°C to +85°C. Special lubricants for temperature extremes and other requirements are available to suit your application. **shaft:** Shaft is No. 416 precision ground stainless steel per QQ-S-763, heat treated and black oxide coated per MIL-C-13924A Class 1. Shaft and last gear carrier are of one-piece construction for maximum reliability. Two shaft diameter options. **electrical connection:** Three or four Teflon-coated #26AWG leads per MIL-W-16878 Type "E." **mounting:** Unit is mounted by means of pilot and four holes in flange.

. shafts are limited to 600 oz. in. cont. duty torque.

HE YOU ORDER

rt Number. To order by part number, select the unit which meets your flange, wer source and output shaft size requirements from the STANDARD PART MBERS AND DATA table. To the basic part number thus obtained, add the ear ratio desired, using the RATIOS AND PERFORMANCE tables. EXAMPLE: A6016

Torque. To find output torque, multiply motor sync torque (see STANDARD PART NUMBERS AND DATA) times torque multiplier (see RATIOS AND PERFORMANCE). This value is limited by the maximum continuous torque given in the RATIOS AND PERFORMANCE tables.

BASIC RATIOS

Basic ratios for Globe odd ratio geartrains are 4⅓:1 and $5^2/_7$:1. Basic even ratios are 4:1, 5:1, and 6:1. Combinations of even or odd ratios result in the gear reduction ratios listed inside. For special ratios simple algebraic relationships will show final reductions available.

let a=4⅓:1 b = $5^2/_7$:1
then a^2 = 18.78:1
ab = 22.9:1
etc.

GLOBE TRW

A.C. HYSTERESIS SYNCHRONOUS AND INDUCTION MOTO

Type CFC (Bulletin B-2508N)

Globe Type CFC motors offer highest quality materials, precision assembly, and extremely compact size with high output. Hysteresis synchronous motors are exact speed units, ideal for times and controls.

Type CFC motors are totally enclosed for dirt and moisture resistance, and have life-lubricated bearings. Single phase operation requires a phasing capacitor (not furnished by Globe.)

Please send complete application data to Globe for an engineering recommendation.

torque: To 2.0 oz. in at 1,800 rpm sync.
voltage: 115 v.a.c.
weight: 11.5 ounces.
rotor inertia: 16.8 gm. cm.²
protection: Protected against dirt, moisture, shock, and vibration.
bearings: Life-lubricated, double-shielded ball bearings.

Low slip-high torque units available on special request.

frame: Thermoplastic.
shaft: Precision ground stainless steel.
electrical connections: #26 AWG leads are provided.
reversibility: Motor reverses by connecting leads per schematics.
mounting: Standard mounting is by means of pilot and tapped hole on motor face.

WHEN YOU ORDER

***Part Number.** The units on this page a and may be ordered by part number. Con ber consists of the basic part number reduction ratio. Example: 230A395-20 is teresis synchronous gearmotor with moto 3600 rpm and a final output speed of 18 the introduction to this catalog section fo in selection.

CW Rotation, Viewing Shaft End. for CCW Rotation, Connect Capacitor to Blue and Brown.

CW Rotation, Vie End. for CCW Rot nect Line to Blue

Note: Be sure to check Globe for latest data prior to preparing spec. control prints.

A.C. HYSTERESIS SYNCHRONOUS & INDUCTION GEARMOT

Type CFC (Bulletin B-2528N)

Type CFC planetary gearmotors are lightweight a.c. commercial/ industrial units designed to provide the performance and size advantages of military gearmotors in a lower cost package. Hysteresis synchronous versions can be provided with any of 83 standard planetary geartrains with speed reduction ratios from 4:1 to 46,656:1, and torques to 1250 oz. in.

Type CFC gearmotors offer the same high quality, compact size, and high output as Globe military units. They are totally enclosed and resist dirt and moisture.

torque: To 1250 oz. in. maximum continuous torque.
voltage: 115 v.a.c., 60 Hz.
weight: 18 to 23 ounces depending upon ratio.
gears: Planetary gearing system. All gears are precision manufactured and heat treated for consistently reliable performance and life.
backlash: Varies with reduction ratio but average unit will have less than 3° backlash.
protection: Gearmotor is encapsulated in thermoplastic.
bearings: Output shaft is supported by two lifelubricated sleeve bearings.
lubrication: Motor and geartrain are life-lubricated.
shaft: Precision ground stainless steel.
electrical connection: #26 AWG leads are provided.
mounting: Standard mounting is by four through holes in flange.

TORQUE = Torque Multiplier x Motor Torque
TORQUE MULTIPLIER = Reduction Ratio x Efficiency
CONT. RATING REFERS TO MAXIMUM CONTINUOUS DUTY RATING OF GEARTRAIN

Type CFC (Bulletin B-2702N)

CFC motors are available with a wide variety of performance characteristics and are designed to applicable MIL-specs for environmental protection, integral planetary geartrains and other voltages and frequencies are available.

Bulletin B-2732N for details. Send complete data for Globe engineering recommendation.

Torque: 1.0 to 2.5 oz. in. (induction). 0.8 to 1.2 oz. in. (hysteresis synchronous).

Voltage: 115 and 200 v.a.c. 60 and 400 Hz.

Diameter: 1 1/16".

Weight: 11 ounces.

Rotor inertia: Hysteresis synchronous; 2 pole 1.2 GM CM²; 4 pole 10 GM CM²; 6 pole 9.4 GM CM². Induction: 7.2 GM CM².

Construction: Housing is black anodized aluminum alloy MIL-A-8625. Motor is designed to meet applicable parts of MIL-M-7969 as well as MIL-E-5272. Wiring: MIL insulated magnet wire is standard. Bearings: Stainless steel ball bearings are double-shielded, life-lubricated. Standard lubricant conforms to MIL-G-23827. Special lubricants for temperature extremes are available.

Shaft: Aluminum alloy.

Rotor: No. 416 stainless steel, centerless ground.

Electrical connections: #26 AWG lead wires per MIL-W-16878 (AVY) Type "E"; three or four leads are ordered.

Reversibility: Motors can be reversed by connecting as per schematics.

Mounting: Standard procedure is by means of pilot and tapped holes in front face.

WHEN YOU ORDER

***Part Number.** Units described above are standard and may be ordered by part number.

Note: Be sure to check Globe for latest data prior to preparing spec. control prints.

TO RUN SINGLE-PHASE, CONNECT LINE TO A AND C: FOR CLOCKWISE ROTATION, CONNECT CAPACITOR B TO C; FOR COUNTERCLOCKWISE ROTATION, CONNECT CAPACITOR B TO A.

TO RUN SINGLE-PHASE, CONNECT LINE TO A AND B: FOR CLOCKWISE ROTATION, CONNECT B TO D AND CONDENSER TO A AND C; FOR COUNTERCLOCKWISE ROTATION, REVERSE C AND D.

GLOBE TRW A.C. HYSTERESIS SYNCHRONOUS AND INDUCTION PLANETARY GEARMOTORS

Type FC (Bulletin B-2732N)

Globe Type FC planetary gearmotors offer 83 even and 20 odd ratios ranging from 4:1 to 46,656:1. Special geartrains are available with ratios up to 17,000,000:1.

Globe Type FC motors with synchronous rotors are wound 60 or 400 Hz, 2, 4, or 6 poles. They may be operated single, two or three-phase.

Send application details for a Globe recommendation.

torque: Up to 1250 oz. in. maximum continuous torque.
voltage: 115 or 200 v.a.c., 60 and 400 Hz.
size: 1 11/16" max. diameter. Length depends on ratio.
weight: 16½ to 20 oz. depending on ratio.
gears: Planetary gearing system; all gears are precision manufactured and heat treated for reliable performance and long life.
backlash: Varies with ratio, but unit will have less than 3°.
protection: Housing is black, anodized aluminum per MIL-A-8625. Motor is designed to meet applicable portions of MIL-M-7969 as well as MIL-E-5272.
bearings: Double-shielded ball bearings are life-lubricated per MIL-G-23827. Motor bearings are stainless steel. Special lubricants for extreme environments are available.
shaft: Shaft is #416 precision ground stainless steel per QQ-S-763, heat treated and black oxide coated per MIL-C-13924A Class 1.
electrical connection: Teflon-coated #26 AWG lead wires per MIL-W-16878 Type "E"; three or four leads are standard.
mounting: Standard mounting is by pilot and four holes in flange.

Note: Be sure to check Globe for latest data prior to preparing spec. control prints.

WHEN YOU ORDER

Part Number. To order by part number, select the unit which meets your flange, power source and output shaft size requirements from the STANDARD PART NUMBERS AND DATA table. To the basic part number thus obtained, add the gear ratio desired, using the RATIOS AND PERFORMANCE tables. Example: 83A1008-80.
Output Torque. To find output torque, multiply motor sync torque (see STANDARD PART NUMBERS AND DATA) times torque multiplier (see RATIOS AND PERFORMANCE). This value is limited by the maximum continuous torque given in the RATIOS AND PERFORMANCE tables.

BASIC RATIOS

Basic ratios for Globe odd ratio geartrains are 4-1/3:1 and 5-2/7:1. Basic even ratios are 4:1, 5:1, and 6:1. Combinations of even or odd ratios result in the gear reduction ratios listed inside. For special ratios simple algebraic relationships will show final reductions available:

let a = 4-1/3 b = 5-2/7:1
then a^2 = 18.78:1
ab = 22.9:1
etc.

GLOBE TRW A.C. HYSTERESIS SYNCHRONOUS AND INDUCTION COMMERCIAL MOTORS

Type UC (Bulletin B-3608N)

Globe Type UC commercial motors are small precision-made units designed for use in commercial products of high quality. They provide protection against dirt and moisture, and retain all the important qualities of the MIL-spec design.

Three stack lengths are available providing a choice of torque options up to 8.5 oz. in. They operate on 115 v.a.c., 60 Hz, single phase, 2 or 4 pole. Other voltages and frequencies are available. Spur geartrains can be provided for many speed-torque combinations.

Please submit complete details of your application for an engineering recommendation.

power: At 3,600 rpm continuous, UCS—1/333 hp. UC—1/110 hp. UCL—1/35 hp.
voltage: 115 v.a.c.
size: 2 5/16" diameter.
weight: UCS—15.3 ounces. UC—25.1 ounces. UCL—34.5 ounces.
rotor inertia: UCS—67 gm. cm.²; UC—123 gm. cm.²; UCL—205 gm. cm.²
protection: Housing is painted black, crinkle finish.
winding: HML insulated magnet wire. Stator is completely molded in an epoxy encapsulation to resist dirt and moisture.
bearings: Chrome steel life-lubed ball bearings. Stainless steel bearing seat.
frame: Aluminum frame is integral with housing.
shaft: No. 303 precision ground stainless steel.
electrical connection: Leads are provided.
reversibility: Motor is reversible.
mounting: Standard mounting is by pilot and four holes in flange.

Note: Be sure to check latest data prior to pre spec. control prints.

Air Pump (Bulletin C-1310N)

Note: Be sure to check Globe for latest data prior to preparing spec. control prints.

The Globe A.C. Air Pump is a miniature air compressor powered by a Globe Type LC induction a.c. motor. The unit is equipped with a diaphragm-type compressor, and is provided with a plastic air nozzle and flexible hose. Modifications can be made for specific applications, such as air-blast cleaning, small air guns, and vacuum operation.

Units for operation on other voltages with A.C. induction or D.C. permanent magnet motors can be made available.

Send application details for Globe engineering recommendations.

rating: 1 cfm @ 5 psi.
voltage: Standard units for 115 v.a.c., 6 phase.
weight: 3.5 lbs. max. including cord, exha assembly and fitting.
construction: High-strength molded housing filled nylon. Fan cooling permits handling tinuous duty. Self-contained motor capacit
bearings: Double shielded life-lubricated b ings.
exhaust tube assembly: Plastic nozzle and tubing resistant to lubrication oils and ethylene.
electrical connection: Two-conductor male SJT cord with cord-mounted switch. Non-co case completely isolates motor from exterio

MOTORS

ere re is a choice of d.c. or a.c. power sources, re are two reasons why a.c. motors may meet reme s best. One is design simplicity. Globe a.c. tors ve no rotating windings, brushes or commu- rs il thus eliminate any problems these may ng ut. A second is that the motor shaft speed be ade independent of torque load and input tage rough use of a synchronous motor design. icien of a.c. motors is somewhat lower than d.c. igns.

w the work

st Glbe a.c. motors carry a winding on the stator, ich istationary, and induce a rotating magnetic ld wi in the stator bore. The field induces eddy rrent n the rotor, exerting torque on it. The field is ated y two or more mechanically separated wind- s on he stator periphery. Each winding is fed by parat a.c. voltages displaced from each other in e ase. Out-of-phase voltages are furnished by e pov r supply. In so-called single-phase motors tual two phases) the second phase displacement sup ed by a capacitor, in series with one of the ndin. (Globe does not supply capacitors.)

ductin motors

indtion rotor is made of steel laminations with ots in which bars of highly conductive material are aced The eddy currents induced in the rotor de- nd c relative motion between the rotating mag- tic fld and rotor bars. Therefore the rotor can ver avel at the same speed as the field, but ays lower. Torque is determined by the conductivity of the rotor bars. By selecting the proper bar material, speed-torque characteristics can be varied to suit specific applications. Induction motors are versatile, rugged and reliable, and produce greater running torques than hysteresis synchronous motors of equivalent size.

Synchronous motors

The difference between synchronous and induction motors is that induction units produce torque when the rotor is slipping behind the stator field. True synchronous motors supply torque only if the rotor is traveling at the same speed as the synchronous field. When the rotor approaches synchronous speed it locks in with the rotating field and continues to rotate synchronously with it. Globe accomplishes the initial start with a special alloy rotor with a hystereris loop. When placed in the rotating magnetic field of the stator, it will reach peak magnetization slightly after the peak flux density of the rotating field has passed. The lag in peak magnetization causes torque to be exerted on the rotor and the rotor starts turning and moves into synchronization with the field. Once in synchronization, it will hold a given speed to whatever accuracy the input frequency can be held.

With Globe a.c. motors hysteresis synchronous design is a basic standard and not a costly special type.

Gearmotors

Globe a.c. motors can be furnished as gearmotors using one of many standard gear ratios. These ratios make it possible to obtain a wide range of speeds and torques. For geartrain selection, refer to bulletins.

se are examples of modifications available m Gle. For additional information on dificans for your application, consult the tory. 13) 228-3171

PECI. SHAFTS
obe ustries can furnish special pinions d spcal shaft configurations. Possibilities clude ats, slots, tapers, threads, keyways, d ho.

PECL ASSEMBLIES
obe an design special assemblies of otors brakes, clutches, and other power emen in a single package. This single urce pproach is generally more economical nd re ble.

SPECL MOUNTINGS
esig can match application requirements ich servo mounts, tapped holes, special onfi ations, etc.

SPECIAL GEARING
Globe motors may be fitted with special gearing. The right angle gearhead shown is typical of configurations available on special order. A Globe gearmotor can be custom engineered for your application.

SPECIAL PUMPS
Our pump capability covers both liquid and air designs. Globe has a number of proven innovations, such as magnetic coupling of pump impellers to eliminate seal problems. Submit your requirements for review.

SPECIAL ACTUATORS
In production quantities, Globe actuators are complete packages incorporating all necessary take-off and control elements, together with motors and gear reducers Globe rotary and linear actuators are custom engineered for the specific application.

TACH GENERATORS
Globe tach generator experience goes back 20 years. We produce large quantities for a wide variety of specific applications. Gearmotors can be designed around most Globe frame sizes.

GEMCOR

ELECTRO MECHANICAL COMPONENTS

HYSTERESIS CLUTCHES & BRAKES

offer maximum reliability — smooth clutching — minimum maintenance. They are ideal for tension control and power absorption devices where smoothly variable slip torque is required. Torque is proportional to control current. Clutch-brake combinations also available.

SLIP RINGS
Solid Coin Silver

Standard Coin Silver Slip Rings, both *cylindrical* and *flat* types, are illustrated at right. We recommend the cylindrical type rings with three brushes per ring . . . spaced at 120°. The cylindrical type are designed for press fitting over standard steel shafting. The flat type rings are designed for nesting either on an insulated plate or for molding into insulation. Insulated slip rings of either type or slip-ring assemblies can be furnished with leads attached.

No. 168 Series flat type to 20" O.D.

Standard "Flat" rings have ¼" radial contact surface and ⅛" radial spacing between adjacent rings.

No. 116 Series cylindrical type to 36" O.D.

Copper Slip Rings, flat or cylindrical, are available.

Creative Engineering in Electronic and Electromechanical Timing and Control

Timing, Drive & Stepper Motors

Chronometrically Governed—D.C.

Accuracy: to ±0.1% military; ±0.5% industrial, no load to full load. Many voltage ranges. Speeds: 3600 rpm to 1/144 rpm. Radio interference filtered, if required.

General Duty Synchronous

24 to 240 VAC, 50 or 60 Hz. Torque: 2 oz-in @ 300 rpm direct from rotor. Integral gearing provides speeds as low as 1 rpm. Gear train rated at 100 oz-in. Rotation reversible by changing one connection.

Miniature Reversible Synchronous

12 to 230 VAC, 50 or 60 Hz. Torque .75 oz-in @ 300 rpm direct from rotor. Power input 1.5 watts nominal. Output speeds from 300 rpm to 1/6 rph. 2-coil winding. Reversible. Measures only 1-7/16" x ¾".

5-volt 4- and 8-Phase Steppers

Rugged, economical permanent magnet construction. Low temperature rise. 3¾°, 7½° and 15° step angles. Pull-out rates to 7500 steps/sec. Maximum working torques to 22.2 oz-in.

Indicating Devices

Microminiature Elapsed Time Indicators

115 VAC, 50 or 60 Hz. Only 37/64" square by 1¼" long. Either front or side readout. Reads to 9999 hours, then recycles. Ideal for warranty and maintenance controls.

Commercial Elapsed Time Indicators

21 standard low-cost models. 6-digit readouts in "hours & tenths," "minutes & tenths" or "seconds." Round or square flange units meet NEMA standard dimensions. 50 or 60 Hz.

Microminiature "BITE" Indicators

"BITE" (Built-In-Test-Equipment) Indicators monitor circuit or system performance to DOD "Systems Readiness" requirements. Respond to pulse as low as 15 MS. Meet MIL-E-5400 H, Class 1-A. Measure only .2" x .4" x .7".

Low Cost Fault Indicators—"BITE"

Operate on same principle as Microminiature "BITE" Indicators but lower in cost. Either manual or electrical reset types. Only .320" dia. x .812" long. DC operation.

Timing Devices

Time Delay Relays

A broad line of AC or DC electromechanical and electronic timers for industrial and military applications. Fixed or adjustable delay times. Many mounting options.

Stepping Switches

Solenoid operated printed circuit type 12 or 28 VDC or rectified 115 VAC, 50 or 60 Hz. 3, 4, 5, 6, 10 or 12 positions. Step up to 15 steps/sec. Can be factory modified to meet specific needs.

Repeat Cycle Timers

Low-cost AC or DC electromechanical and electronic industrial types for loads up to 25 amp. Standard motor-driven timers have up to 12 switches and wide range of cycle times. Electronic timers available in range of adjustable or fixed cycle times.

Time Code Generators

Electronic or electromechanical in IRIG or other specified codes. Available in bench rack or plug-in modular form. High degree of accuracy in all units. AC or DC.

ELECTRO-MECHANISMS

Advanced concepts for integration of electrical and mechanical energy into useful components and systems.

SERIES 33000 "BIG INCH" SINGLE PHASE, SYNCHRONOUS INTEGRATING MOTOR

Ideal drive for elapsed time indicators, stop clocks, pulsers and interrupters, chart drives. **Fast Start-Stop:** Rotor locks in on first line frequency cycle; stops instantly without coast. **Compact:** Approximately 1" diameter by 1" long. **High Torque:** Higher than many motors twice its size. **Low Wattage:** One watt input at rated voltage. Standard voltage ratings 20V and 115V 60 Hz. Cool operation. **Unidirectional:** Shaded pole starting. No mechanical no-backs. **Sealed Gears:** Heavy duty, permanently lubricated. Standard speeds 360, 300, 60 and 3.6 RPM. **Low Cost:** For high volume applications. Tooled for mass production.
Reference: Bul. No. 33-1

SERIES 33600 "BIG INCH" BIDIRECTIONAL 2-PHASE INTEGRATING MOTOR

Instantly reversible by switching capacitor from one coil to the other.

The fast start/stop and reversing characteristics of 33600 series motor makes it ideally suited for control functions where shafts, potentiometers, indicators, etc. must be precisely positioned.

The motor can "inch" in either direction in small increments and stop without coast. **Compact:** Approximately 1" in diameter by 1¼" long. Standard voltage ratings 20V and 115V 60 Hz 2 watt. Other characteristics same as for 33000 series motor.
Reference: Bul. No. 33-2

SERIES 6100 HERMETICALLY SEALED PRECISION SWITCHES

Patented Elastomer Seal and one-piece snap action blade performs reliably under extreme vibration conditions. **Temp. rating:** −65° +300°F. Available to +400°F. **Electrical ratings:** 28 VDC/115 VAC. 5 amp resistive, 3 amp inductive. Meets requirements of MIL-S-8805. **Actuators:** Leaf, roller, toggle and push button. Low operating force.
Reference: Cat. No. 72

SERIES 38 A.C. SYNCHRONOUS INDUCTOR MOTOR

High Torque: Low power input. **Instant Start:** Locks in with line frequency within one cycle. No mechanical device needed to insure correct rotation. Readily adaptable to chart and other drives requiring constant speed output. **Compact:** 1¼" x 1 13/16" x 2". Standard speeds 60, 30, 20, 10 rpm.
Reference: Bulletin No. 38-1

SERIES 6300 HERMETICALLY SEALED PRECISION SWITCHES

Housing: Corrosion resistant housing with integral wobble diaphragm. One piece snap action blade as in 6100 Series, proven in years of performance. **Standard rating:** −85°F +300°F. **Electrical ratings:** 28 VDC/115 VAC. 5 amps resistive, 3 amps inductive, 3 amps motor. Meets requirements of MIL-S-8805. **Operating force:** recommended for extreme environmental conditions.

SERIES 6200 HIGH TEMPERATURE HERMETICALLY SEALED SWITCHES

With metal to metal and glass to metal seals corrosion resistant steel base and housing heliarc welded to avoid use of fluxes normally used in solder sealing. Actuator operates switch through metal diaphragm integral with housing. **Standard rating:** −65° +660°F. **Electrical ratings:** 28 VDC/115VAC: 5 amps resistive, 3 amps inductive, 3 amps motor. Meets requirements of MIL-S-8805.
Reference: Cat. No. 72

PUSH-BUTTON AND TOGGLE ACTUATED, HERMETICALLY SEALED SWITCHES

Incorporate Series 6100 basic switch to meet requirement of MIL-S-8805, enclosure 4. Also available with 6300 Series switch to meet enclosure 5 requirements of MIL-S-8805. Toggle switches are available in various configurations of one-pole and 2-pole, 2-position and 3-position. Push-Button switches are single or double pole, momentary. Corrosion resistant materials used throughout.
Reference: Bul. No. 61T-1

SERIES 5300 4 WAY TOGGLE SWITCH

2 pole double throw each position. Center off. Momentary contact, maintained contact, or combinations. 28 VDC/115 VAC: 5 amps resistive, 3 amps inductive. **Reference: Bul. No. 53T-3.** Available with water tight panel seal.

SPECIAL SEALED SWITCHES

H.S.I. has had years of experience in providing answers to difficult switching problems. Let our engineers help you.

For information on all product lines, send for Catalog 101; and for complete data on individual products, refer to Bulletin Number indicated.

SERIES 42 HIGH SPEED DIGITAL STOP CLOCK

Planetgear® totalizer measur or integrates time intervals in 100 second increments. Operate on 115V 60 Hz line power. Time ad-ings displayed in large easily ad numerals. Available with 6 8 digits. Non-reset, manual res or electrical reset. Accurate — ng life.
Reference: Bul. No. 42-3 for el mounting models.

SERIES 42005 DIGITAL STOP CLOCK AND TIME TOTALIZER

Electrically resettable Planetg® totalizer enclosed in attractiv n-strument type case with line d, remote reset switch and cord or laboratory use. Totalizes in 1 0 second increments to 9999.99 c-onds on 115V 60 Hz supply.

SERIES 44 PLANETGEAR® PULSE COUNTERS

Non-Reset, Manual Reset, Electr l Reset Models. AC or DC comp e unique Planetgear digital cou r driven by an HSI stepper mo . Large 5/16" high figures easily r . Long life, reliable. Pulse rate: u to 40 PPS standard; up to 100 S on special order. 6 and 8 di s standard.
Reference: Bul. No. 44-1R

HEAVY DUTY SYNCHRONOUS MOTORS

NEW! Mini-Bee

MODEL MB
Just 2 13/32" x 2 5/8" long. 1/100 H. P. Start torque 6 in. oz. at 1800 RPM. Sync torque: 5¼ in. oz. Reversible.

- VIDEO RECORDING
- INSTRUMENTATION
- DATA HANDLING
- TAPE RECORDING
- TELEMETERING
- TURNTABLES
- AND NUMEROUS OTHER DIRECT DRIVE APPLICATIONS

Hystereris synchronous. 40°C heat rise, full load. Inverted rotor for reduced flutter. Sealed ball bearings. Stainless steel shafts, lifetime lubrication.

Honey Bee

MODEL HB
1/50 H.P.Start torque 12 in. oz. at 1800 RPM. Sync torque: 11 in. oz. Avail. 1800, 1200, 900 RPM. 3¾" dia. x 3⅝" long. Reversible.

hurst MODEL GA
600 IN. OZ. OF TORQUE AT 1 RPM (Reversible)

For long life and higher torque applications. Offers instrument manufacturers high performance and economy.

- HEAVY DUTY GEARING
- NO LUBRICATION REQUIRED
- CAPACITOR INCLUDED

MODEL GA

hurst MODEL EA
150 IN. OZ. OF TORQUE AT 1 RPM (Unidirectional)

Open frame, shaded pole, extremely cool running. Bronze bearings, brass gears, hardened steel pinions and wheel shafts, stainless steel output shaft. For dependable, low-cost timing applications. Wide range of speeds.

MODEL EA

hurst MODEL DA
150 IN. OZ. OF TORQUE AT 1 RPM (Reversible)

Timing accuracy both clockwise and counter-clockwise. SPDT switching. Case 2½" diam., 1¾" long. Will not overheat. Capacitor included.

hurst MODEL CA
100 IN. OZ. OF TORQUE AT 1 RPM (Reversible)

Features 1200 rpm rotor speed for quiet performance. Extremely versatile (animated displays, program instruments, outdoor advertising, etc.). Wide range of output speeds. Will not overheat. Capacitor included.

MODEL CA

hurst MODEL SM
RATED 40 IN. OZ. OF TORQUE AT 1 RPM (Unidirectional)

For tough jobs demanding accurate timing. Excellent shock and vibration resistance. Starts instantly at full torque. Will not overheat. Wide range output speeds.

hurst MODEL PC-SM / MODEL PC-DA
MODEL PC-SM: CLUTCH AND BRAKE MOTOR 40 IN. OZ. OF TORQUE AT 1 RPM (Unidirectional)
MODEL PC-DA: CLUTCH AND BRAKE MOTOR 120 IN. OZ. OF TORQUE AT 1 RPM (Reversible)

Both are positive clutch and instantaneous brake motors. For extremely fast starts and stops. Motor runs continuously with clutch and brake controlled by switching actuator only. Clutch starts output shaft within 20 milliseconds; brake stops output shaft within 1/5° at 1 rpm; within 12° at 60 rpm. Motor on AC voltage; actuator AC or DC. Either can be supplied in any voltage combination when motor is AC. Will not overheat.

MODELS DA SM

hurst MODEL AR-DA / MODEL AR-SM
MODEL AR-DA: 100 IN. OZ. OF TORQUE AT 1 RPM (Reversible)
MODEL AR-SM: 40 IN. OZ. OF TORQUE AT 1 RPM (Unidirectional)

Automatic reset. Planetary-type clutch operates directly upon output shaft. When de-energized, shaft is manual or automatic reset. Addition of external return spring to output shaft provides automatic reset on either model. Motor on AC voltage; actuator on AC or DC. Either can be supplied in any voltage combination when motor is AC. Will not overheat. Capacitor included.

rque to 72 ounce inches

th a uni ectional Series 50 you can . . .

ve your load remotely through a ort steps and stop at any one of or 24 positions.

add a knob for manual reset in ction . . .

r add rotary switches for a com- ower positioning drive and a step n switch

or use shaft extensions on each end -couple two loads and drive them in direction at the same time.

idirectional Series 50 you can do all us **remotely position** loads CW or

king parts are completely enclosed. n life is 3 million steps. For bidirec- 3 million in each direction. And, the 50 works on simple square wave input . . so you don't need expensive logic .

48 stock models for quick prototype starts

Top curve in each graph shows net starting or breakaway torque, typical when friction component of load is high in beginning — as in driving a valve. **Lower** curve applies when friction load is consistent throughout stroke. Dotted lines "A" show output at 1/4 duty, 84 watts; dotted lines "B" 1/10 duty at 210 watts.

Highlights	Unidirectional	Bidirectional
Voltage	6 to 220 VDC	6 to 220 VDC
Length	1.9″	2.5″
Width	2 1/16″ (Dia.)	2.5″
Height	2 1/8″ (Sq. plate)	2 13/32
Weight	14 oz.	24 oz.
Price, 1-9	$23-$24	$37-$39
Price, 1000 up	$10-$12	$16-$18

Ledex Series 50 stepping motors are engineered for high torque-to-size, uniform stepping accuracy, construction simplicity and economy. Newly developed tooth clutch drive gives positive grip stepping action (no slip) and doubles as a built-in electromechanical clutch brake to eliminate the natural tendency of overdriving at the end of a step.

Catalog D-7000 lists complete details on 48 stock models, performance data and engineering considerations. We'll gladly send it to you. If you prefer, send us details of your positioning application and we'll come back with a recommended solution.

LEDEX STRAIGHT PULL DC SOLENOIDS

You name the job.
Short, medium or long stroke. High speed. Tight space. Unusual load. Ledex has the solenoid for you, usually on the shelf. Expert design assistance for your toughest custom requirements.

Pancake shaped Ledex push/pull solenoids are built for high force to size and fast response. Better than 10ms response. Form factor minimizes size, provides maximum pole face surface for best efficiency. Two types available. Flat face short stroke, rapid response. Conical face more mid-range punch.

Quality engineered for efficiency and long term dependability, the Ledex long stroke solenoid has a built-in impact cushion pad to absorb energy at the end of the power stroke. For smooth travel and long wear, the solenoid plunger is electroless nickel plated. It rides in a smooth bushing track des for positive alignment and low friction. Sl and cross drilled plungers on all stock models plify load attachment. Off-the-shelf models able for 12, 28 and 100 VDC operations.

* 3B and 5B have random wound coils; all other are precision wound.

Rotary Solenoid as a Linear Actuator

AFT BAR LINK

ARMATURE LEVER

ARMATURE DRIVE PIN

Wh the stroke length is beyond the range of Ledx straight pull solenoids, a rotary solenoid maybe the best solution.

Ledx rotary solenoids have raceways coined in the rmature and stator. With precision ball bearing riding on inclined raceways, the solenoid provid direct, almost friction-free rotary motion. In the eginning of the stroke, where the output of a liner solenoid is low, the raceways are steep. Toard the closed end, where the magnetic attraction reaches maximum force, the raceways taper off The effect is to evenly distribute the force.

Ledex solenoids can help you get a lot of work done in places where you don't have much room. We make both push/pull and rotary solenoids in a wide variety of shapes and sizes to solve just about any actuating problem you have.

Call Ledex when you need a lot of power in a small space to push, pull, turn, twist, step, index, hammer, punch or trigger. For a quick start on your prototype, choose from 252 different stock model designs. Or, send details and we'll custom design a space-saving solenoid for you.

MAG TECH LOW-COST, DIRECT-DRIVE DC SERVO MOTORS

These direct drive DC servo motors couple directly to the driven load, eliminating the disadvantages of gears and gear trains in servo systems. They provide fast response and precise positioning, as well as high tracking accuracy and smooth, quiet operation.

Because no gears are needed, system simplification is possible and excellent system stability results. Permanent magnet fields and moving iron design result in minimum input power and high thermal inertia.

Such features make these motors ideal for use in disc packs, tape transports, card sorters, readers and other computer peripheral equipment, and applications where high torque-to-power ratios and high torque at low speeds with rapid accelerations are important. In these applications, MagTech direct drive DC servo motors provide performance, reliability and packaging advantages unexcelled by other drive units. These motors are furnished with metal housings as shown, but also can be furnished as matched components—armature, field and brush assembly—without housing, shaft or bearings.

Magnetic Technology offers designers the broadest line of high performance DC torque motors and tachometer generators. See page **1993** for information on other standard and custom units.

McLEAN COMPUTER DESIGNED PRECISION INSTRUMENT MOTORS

All motors feature: air-cooled bearings to reduce temperature and extend life; dimensionally stable aluminum alloy motor frames; rotors that exceed requirements of MIL-M-17059 to assure extra-smooth running; and other quality features.

HYSTERESIS SYNCHRONOUS MOTORS

OUTPUT PERFORMANCE ON 115 VOLTS, 60 Hz.			
FRAME	RPM	PULL-OUT TORQUE	CAPACITOR
47	1200	15 oz-in.	3 Mfd.
47	1800	14 oz-in.	3 Mfd.
47	3600	12 oz-in.	5 Mfd.
59	1200	55 oz-in.	8 Mfd.
59	1800	60 oz-in.	6 Mfd.
59	1200/3600	45/25 oz-in.	9 Mfd.

REQUEST DATA SHEET

FEATURES

- The starting torque appr mates the running tor Self-starting.
- The motor runs at synch ous speed, but is not ph polarized as are the polari synchronous motors sho elsewhere.
- The direction of rotation the shaft is reversible ex nally.
- Dual voltage and/or d speed motors available.

POLARIZED SYNCHRONOUS MOTORS

PERFORMANCE ON 115 VOLTS, 60 Hz., WITH INTERNAL FAN		
FRAME USED	47 FRAME	59 FRAME
Speed	3600 RPM	3600 RPM
Line current	1.2 amp.	1.5 amp.
Capacitor required	5 Mfd.	8 Mfd.
Stall torque	10-14 oz-in.	27 oz-in. max.
Pull-in torque	15-18 oz-in.	25 oz-in.
Pull-out torque	15 oz-in.*	14 oz-in.*
Reversible	yes	no

*Must not be exceeded for continuous duty.

REQUEST DATA SHEET

FEATURES

- Ideal where repeated ph synchronization is requi between line voltage a shaft position for one more motors.
- Single or dual voltage, only single speed, mot available.
- Currently available for 36 rpm only at 60 Hz. Ot speeds and frequencies av able when the need mater izes.

INDUCTION MOTORS

PSC and 3-PHASE

1600	165	4⅛	60	open, with circulation	single
3200	250	5⅛	60	open, with circulation	single
3200	525	6⅞	60	open, with circulation	single
3200	100	4⅛	400	open, with circulation	single
3200	130	4⅛	400	open, with circulation	three

FEATURES

Optimum design achieved using McLean high speed electronic digital computer with our internally programmed analysis.

Starting and running torques matched to fan and blower loads, where the motors are so used.

Direction of rotation of the shaft is reversible externally.

Dual voltage and/or dual speed motors available.

Face mount is standard, but base mount is available in 47 Frame Size Motor and flange mount is available in 59 Frame Size Motor.

Available for single-phase use in 2, 4, 6, 8, and 12-pole speeds, and for three-phase use in the same speeds.

orthfield
iniature precision
strument bearings-
terchangeable with ball bearings
at only 1/3 the cost!

HER'S HOW DESIGN ENGINEERS CUT BEARING COSTS WITHOUT LOSS OF ACCURACY

Here are the reasons why:

- 1/3 the cost of miniature precision ball bearings
- I.D., O.D., concentricity and facial squareness held to .0002"
- Precision made of sintered bronze (MIL-B-5687, Type I, Comp. A) with 4% Molybdenum Disulphide added after sintering
- Vacuum impregnated with instrument oil (MIL-L-6085A)
- Low coefficient of friction and excellent resistance to radial loads and impact
- Full range of sizes — flanged and sleeve types
- Immediate delivery from stock
- Used in gyro stabilizers, airborne compasses, analog and digital computers, inertial guidance systems, ground control approach instruments, infrared guidance systems, sound recording equipment, etc.

HIGH TORQUE RATINGS AND REPEATABILITY IN SMALLER DIMENSIONS

Model	Dia.	Torque Rating
BUORD Size 5	.500 max.	40 OZ. IN.
BUORD Size 8	.753 max.	80 OZ. IN.

Quality Features: Outstanding repeatability • Low start-torque • Long Life—rugged construction • Hardened and ground screw • Precision engineered to MIL-E-5272 C. Immediate delivery from stock.

Improved gear type miniature adjustable slip clutch

TOP QUALITY FEATURES:
Delrin bearing and clutch plate achieve smooth torque transmission with minimum charge from pre-set torque • Adjustable from zero to 50 inch ozs. torque • Precision engineered to MIL-E-5272 C • Stainless steel gear. Anodized aluminum hub and clamp • Low cost.

Miniature slip clutch coupling

• Simple interconnection between shafts • Teflon coated clutch faces for overload protection • Range: 0-50 oz. in. slip torque • No lubrication • Spring loaded, friction-type • Self-locking • Slip speeds to 1200 RPM.

18	1665.16	1.830

Anti-backlash gears may be specified where lower backlash requirements are necessary.

Custom Services

Planet will translate your assembly drawings and specifications into servo systems and sub systems. Where drawings and specifications are lacking, Planet will design and build complete servo packages to your performance requirements. Matching electrical, mechanical and indicating requirements is a Planet specialty.

AC PRECISION MOTORS

ew for the SEVENTIES...

RC'S EXPANDED MOTOR LINE

PRESENTED ON THE FOLLOWING PAGES SHOWING THE LATEST IN AC MOTORS WITH FRAME DIAMETERS OF 1.00 TO 4.38 INCHES

TLIES: VARIABLE FREQUENCIES • DUAL FREQUENCIES • DUAL VOLTAGE • SPECIAL SHAFT CONFIGURATIONS • SELF COOLED • EXPLOSION PROOF • GEAR HEADS AVAILABLE ALL MOTORS • UL AND MIL SPECIFICATIONS • SPECIAL MOUNTINGS • RATINGS FROM 1/2000 TO 1/4 H.P. • POLYPHASE DESIGNS AVAILABLE • CAPACITOR START/RUN OR RELAY START•

HYSTERESIS AND RELUCTANCE SYNC MOTORS

• MINIMUM WOW AND FLUTTER • PULL-IN TORQUE FROM .1 TO 75 oz. in. • MULTIPLE SPEEDS AVAILABLE • PRECISION BALL BEARING OR SLEEVE • 60 Hz SPEEDS FROM 450 TO 3600 RPM • 400 Hz SPEEDS FROM 4000 TO 24000 RPM •

TORQUE MOTORS

• CONTINUOUS DUTY RATING AT STALL CONDITIONS • STALL TORQUES UP TO 170 oz. in. •

INDUCTION DRIVE MOTORS

• POWERFUL • EXTREMELY RELIABLE • VERSATILE IN APPLICATION • QUIET • LIFE IN EXCESS OF 10,000 HOURS IN MANY APPLICATIONS •

PRECISION GEAR MOTORS

• PRECISION ENGINEERED FOR LONG LIFE • TORQUE UP TO 800 oz. in. • ALL RATIOS • BACKLASH: 30' max. • TEMP RANGE: -55°C TO +150°C • AVAILABLE IN INTEGRAL MOTOR-GEAR-HEAD COMBINATIONS FROM 1.00 TO 4.38 IN DIA •

S) A COMPLETE LINE OF...

RG CUP MOTORS • AC INDUCTION TACHS • AC P.M. TACH GENERATORS AVAILABLE IN MINIATURE T UMENT AND AIRCRAFT INSTRUMENTATION CLASSIFICATIONS • QC PER MIL-Q-9858 • MEET OR EXCEED -9398, MIL-E-5413, MIL-E-5272 • AC SERVO MOTORS • BRUSHLESS DC MOTORS •

AC PRECISION MOTORS

THE FOLLOWING SPECIFICATIONS ARE A TYPICAL SAMPLING OF RC'S "OFF THE SHELF" LINE OF AC MOTORS ... MODELS LISTED ARE SINGLE-PHASE, 115 VAC DESIGN; BUT VARIATIONS ARE AVAILABLE TO SATISFY ALMOST ANY SUB-FRACTIONAL HORSEPOWER REQUIREMENTS.

Total Slip-Ring Capability

from The Professionals

If it's slip-rings, you name it, POLY-SCIENTIFIC makes it. Or, if it's advanced state-of-the-art, we're working on it!

Some of our standard units are: miniatures, micro-miniatures, separates, low-cost units, large units, multi-circuit units (we've gone as high as 500 circuits), hi-rel units. Our state-of-the-art types include hard vacuum separates and capsules (non-outgassing), ceramic/metallic, ultra high temperature resistant, radiation resistant units. In short, solutions to all the *really* tough problems.

Shown on this page is just a little of our slip-ring capability, but it should be enough to convince you that in talking to POLY-SCIENTIFIC, you're talking to the leader.

Typical Applications. Military aircraft instrument systems (C5A).

Performance Capability. 2A current rating. 500 V. dielectric strength between active elements. 15 milliohms max. noise. Environmental performance per Mil-Std-202, Mil-S-6872—Soldering, Mil-Q-9858A—Q. C. Systems, Mil-L-6085—Oil, Mil-Std-130—Piece marking.

Typical Applications. Commercial ir craft inertial navigation systems. C also be used in military aircraft ap tions. New advanced fighter aircraft

Performance Capability. 2 A. curren ing. 500 V. dielectric strength bet active elements. 15 milliohms noise. Mil-L-6085 — Bearing Oil. 45208 — Inspection System Req ments. Mil-E-5400 — Electronic E Aircraft Mil-Std-810—Shock. Mil-Std —Acceleration.

Typical Applications. Cable reel sonar transmission and receiving.

Performance Capability. 1000 volts RMS continuous, 3000 volts RMS hi-pot, less than 1.0 milliohm RMS noise. Mil-E-16400, Mil-Std-108, Mil-Std-167, Mil-S-901 (high impact shock), Mil-Std-202, Mil-Std-108 (watertightness).

Typical Applications. Centrifuge flight simulator, radar, fire control systems.

Performance Capability. D.C. to high frequency Video, I.F., dependent upon size, frequency, and impedance, R.F. frequency; V.S.W.R. less than 1.1 typical, and crosstalk 60 to 80 db down typical, insertion loss less than .5 db. Noise less than 10 milliohms peak-to-peak. Mil-E-5272, Mil-Std-810, Mil-I-16910.

Polytwist™ Capsul

A brushless signal and power transmitting capsule developed for applications requiring low torque, no noise, and long life under oscillating motion.

RVO-TEK—FOREMOST IN SPEED MEASUREMENT AND CONTROL

Proven Performance, Reliability and Ease of Maintenance for the Most Demanding Industrial Applications

SOLID-STATE

"500" SERIES PRECISION ADJUSTABLE-SPEED DRIVES

ALL MOTORS TOTALLY ENCLOSED, FAN-COOLED

SPEED RANGE Infinitely adjustable from less than 24 rpm to more than 3600 rpm (150:1) while delivering rated torque. Continuous duty rating at all speeds.

REGULATION Temperature-compensated tachometer feed-back provides tight speed load regulation of better than ⅓ of 1% of rated speed.

MAINTENANCE Design eliminates vacuum tubes, selenium rectifiers and time delays. Utilizes silicon diodes, transistors and a magnetic amplifier for exceptionally long service life. Modular plug-in construction requires only a screwdriver for servicing.

REMOTE CONTROL A 10-turn potentiometer provides precise adjustment and can be placed in any convenient location. Meter monitors operation and continuously indicates speed.

GEARED MOTORS Motors are available with integral gear reducers.

BRAKING-REVERSING Relay-controlled braking and reversing models available.

1 HP AS ILLUSTRATED

$687.00*

Other Models from ⅛ hp to 1½ hp proportionately priced

D-C PERMANENT-MAGNET

TACHOMETER GENERATORS

TEMPERATURE-COMPENSATED

Applications

SERVOS—The highly linear output and wide speed range are ideal for velocity or integrating servos. Low-driving torque permits its use as a damping or rate signal in all types of servos.

TEMPERATURE-COMPENSATED — The voltage output @ +25°C. will not deviate from this amount by more than 1/100 of 1% per degree of change when operated at any temperature within the designed temperature range of −20°C. to +75°C.

SIZE — Miniature. Approx. Dia. 1⅛".

OUTPUT — Various models with outputs as high as 45v/1000 rpm.

LINEARITY — Linearity from 0 to 12,000 rpm is better than 1/10 of 1% of voltage output at 3600 rpm.

BRUSH LIFE—Better than 100,000 hours (10 years) of continuous operation at 3600 rpm.

BIDIRECTIONAL OPERATION — Output in either direction is held to a ¼ of 1% tolerance.

RIPPLE — The rms value will not exceed 3% of the d-c value at any speed in excess of 100 rpm.

CONSTRUCTION — Aluminum housings with protective treatment; stainless steel shafts; fully-shielded stainless steel ball bearings; Mylar insulation.

$25.50

Our Engineering Test Report describing performance characteristics, test procedure and test results, is available at no charge, upon requst.

D-C PERMANENT-MAGNET

SERVO MOTORS

Model SU-680D-29 delivers 12.7 watts of Continuous Power Output at 8600 rpm

Applications:

Chart Recorder Pen Drives, Null-seeking Devices, Capstan Drives for Tape Transports, Proportioning Applications, Prime Mover in Servo-Mechanisms.

Specifications:

DYNAMIC: Maximum No-Load Speed @ 23v D-C — 10,000 ±500 rpm; Full Load Torque @ 8600 rpm—2.0 Oz.-In. (max.); Stall Torque @ 23v D-C (Theo.) — 15.0 Oz.-In. (min.); Frictional Torque — 0.25 Oz.-In. (max.); Acceleration at Stall (Torque/Inertia) — 38,000 RAD/SEC^2 (min.); Case Temperature Rise @ Full Load (Free Air Dissipation) — 55°C. (max.); Case Temperature Rise Per Watt of I^2R loss (Free Air Dissipation)—6°C.

STATIC: D-C Resistance — 4.24 Ohms (typ.); Inductance—1.85 Millihenry (typ.); Rotor Inertia — 30.0 GM-CM^2 (typ.); Total Weight — 8.25 Oz. (max.); Length—3.25 in., excluding shaft; Maximum Ambient Temp. — 40°C.

FUNCTIONAL CONSTANTS: Inertial Time Constant — 30.0 Milliseconds (max.); Electrical Time Constant—0.45 Milliseconds (typ.); Torque Constant—2.8 Oz.-In./Amp. (min.); Voltage Constant (Back E.M.F.)—0.019v @ (1) RAD/SEC. (min.); Viscous Damping Factor—1.25 x 10^{-3} Oz.-In./rpm (min.)

Model SU-680D-29

$44.00

Oher Models Available from $26.00

MINIATURE SOLID-STATE D-C

VELOCITY SERVO

COMPLETELY NEW TOOL FOR AUTOMATION, INSTRUMENTATION

Precision electronic Adjustable-Speed Drive replaces small synchronous motors for chart recorders, sequence switches, programmers, etc. Provides adjustable preselected speeds from 3600 down to less than ½ of 1% minimum (200:1) without loss of torque.

Features

Solid-state — Instant response — Tachometer feed-back — Stability better than ½ of 1% of rated speed—Line or load regulation better than ½ of 1% of rated speed —Visual speed indication—Modular plug-in construction — Input power frequency 50 to 400 cps — Two basic models provide either ¼ or 1.2 in.-oz. @ 3600 rpm — Various geared torque units with ratios as high as 7200:1 provide full speed outputs of as low as 0.5 rpm with torque to 100 in.-oz. — Components separately available for incorporation into your equipment.

SINGLE UNITS PRICED FROM

$242.50*

ACCURATE

SPEED INDICATING SYSTEMS

A truly versatile "package" provides accurate speed indication for almost anything that moves. Nearly every industrial process or machine can benefit by the economy and safety of continuous speed indication.

SELF-POWERED—No batteries or external power required.

LOW VOLTAGE—Connecting cable can be as long as 500 ft.

PERMANENTLY LUBRICATED BALL BEARINGS.

EASILY READ 4½" INDICATOR.

TAUT BAND MOVEMENT — Withstands vibration and shock.

STANDARD RANGES — 0 to 100, 250, 500, 1000, 2000, 3000, 4000, 6000, 8000, 10,000 and 12,000 rpm. These speeds can also be provided to read "Percent of Full Speed" or "Percent of Capacity."

0 to 10 rpm available at small additional cost.

Complete System includes Generator, Indicator (specify range), Mounting Base, Coupling and 15 ft. of Connecting Cable.

SINGLE UNITS PRICED FROM

$88.00

PRICES shown are subject to a quantity discount schedule.

*An additional discount is available to resale organizations and original equipment manufacturers using these drives as an integral part of their product.

Prices subject to change without notice.

Design problems?

You'll find reliable solutions at Diehl.

At Diehl we build in not only reliability, but performance as well. Diehl components are designed to perform efficiently, economically and with a maximum product life. Our experience, design and production capabilities all add up to top performing components which help you build top performance into your products.

AC Motors

Induction or synchronous motors of the hysteresis or reluctance type. A broad range of power running from sub fractional up to 15 HP. Noise and vibration free with total shaft runout and concentricity error to meet the most exacting specifications.

Servomotors

Complete line of instrument servo components, power servo components, servo amplifiers and commercial instrument motors to fit just about any design. Self-contained, fan cooling for precise control.

Stepper Motors

Precision control via discrete steps and high slew rates. Typical 15° stepping angle is compatible with all 24 tooth sprockets. High holding torque, high stepping speed and fast response. Ideal for business and office machines and small peripheral devices. Other step angles readily available.

Hi-Accel DC Motors

Low inductance, high response D.C. servo motors ideal for use in high speed printers, capstan motors and wherever high speed response is called for. Smooth and cogging free output torque.

DC Motors-Gears

Permanent magnet and wound field (shunt, series, compound) ¾" to 2½" diameter with wide RPM range, wide ambient temperature range, plus many options such as a variety of gear trains, brakes, etc.

Whatever your problem call your Diehl Representative today—or call us.

Design problems?

You'll find reliable solutions at Diehl.

With our eighty years of experience, building reliability and performance into our components comes naturally. That's why our motors have high-strength aluminum alloy housings and end bells . . . stainless steel shaft . . . dynamically balanced rotors with spring-loaded precision bearings. Why our spindle drives have pre-loaded ABEC-7 bearings to insure no end play . . . our tachometers, high silver content commutators. These are just a few examples, but enough, we feel, to point out why Diehl components can help you build reliability into your own products.

Servo Amplifiers

A full line of servo-amplifiers to fulfill requirements of less than 800 watts with 60 Hz or 400 Hz outputs up to 2200 watts needed for 1 HP servos. The introduction of solid state circuitry has enabled us to produce amplifiers that are lighter, more efficient and more stable.

Spindle Drives

Both synchronous and induction types from fractional to 1 Hp. 80% to 95% efficiency for cool running and minimal thermal expansion. Life expectancy, 3 to 30 years depending on specifications and design. Shaft run out of .001 for fractional ratings or .0005 for integral ratings when measured at the end of an 18" shaft.

Tachometers

Low ripple. For systems requiring a highly linear (0.1%) speed/voltage relationship and low ripple performance. Life expectancy exceeds 10,000 hours at 3600 RPM and 25°C. Available with servo type mounting, face or flange mounting configurations. Operating temperature —55° to 75°C.

Vortex Blowers

High pressure or vacuum air delivery in single stage blowers at low RPM. Operate on unique principle of regenerative flow. Performance from a single stage means less weight, less bulk, lower cost, lower noise, longer life and easier servicing. Available for 60 Hz or as belt drive design permitting your own choice of drive motor.

Whatever your problem call your Diehl Representative today—or call us.

SLO-SYN

TYPE SS25

TYPES SS400 & SS402

TYPES SS150 & SS152

TYPES HS50 & HS52

TYPES X250 & X252

TYPES X1000 & X1002

A-C OPERATION — Standard SLO-SYN Synchronous/Stepping Motors are permanent magnet a-c motors having extremely rapid starting, stopping and reversing characteristics and a slow basic shaft speed of 72 rpm synchronous with a line frequency of 60 hertz. Three-lead types need only a single-pole, three-position switch for complete forward, reverse and "off" control. No excessive inrush current when energized because starting and operating current are nearly identical. Can be completely stalled without overheating and with no harmful effects on components. Starts or stops in less than 5° of shaft rotation; no need for mechanical or electrical braking. When used with an auxiliary high speed motor, the SLO-SYN motor can remain coupled to the load and safely overdriven. Phase shifting resistor and capacitor must be used when operating from a single-phase source but not from two-phase. All standard motors are rated for continuous duty at maximum ambient temperature of 40°C. Types SS150 and SS152 use Class A insulation; all others have Class B.

D-C STEPPING — When used for phase-switched d-c stepping, the motors can be connected to provide either 100 or 200 steps per revolution. Accuracy of the steps is ±.09° no cumulative. Three-lead types require a center-tapped d-c sup ply and single-pole, double-throw switching; four-lead type require a single-ended power supply and single pole, doubl throw switching. Bifilar motors can also be used with tran sistorized switching circuits. With a suitable control potent ometer instead of switches, a SLO-SYN motor can be mad to rotate steplessly, permitting extremely accurate positionin All motors have lubricated-for-life bearings.

PRECISION STEPPING

For phase-switched d-c stepping, types HS25, HS50, HS50 and HS50L make 200 steps per shaft revolution. Each 1. step is accurate within ±3% (.06°) noncumulative. May operated at speeds greater than 500 steps per second if acce erating and decelerating circuits are used. With proper ci cuitry, the motors may be operated at speeds of 1000 steps p second or higher without missing any steps.

200 RPM

Types TS25, TS50 and TS52 are similar to standard mode but operate at synchronous speeds of 200 rpm and take 36 c 72 steps per revolution when used for d-c stepping.

BIFILAR

Used for d-c stepping where use of push-pull circuitry and center-tapped power supply is not possible or where increased torque at high stepping speeds is required.

SPECIAL ENVIRONMENT

High Vacuum types for vacuums to 10^{-6} Torr; High Temperature types for temperatures to 130°C; High Radiation types withstand dosage of 3,000 megarads. All available from 50 to 1800 oz-in; High Vacuum 25 oz-in also.

PLANETARY GEAR

Basic 50 and 150 oz-in types and type X250 available with planetary gear assemblies in speeds of 16.6, 3.32, 0.665, 0.133 or 0.027 rpm; 16.6 rpm available in other 250 and on 400 oz-in types.

FOUR-LEAD

Designed for d-c stepping to provide the flexibility needed for use with equipment requiring isolated windings with no common connection.

DOUBLE END

Three-lead, bifilar and four-lead types with output shaft at each end of motor available in all listed torque ratings. 50, 150 and 250 oz-in types available also with planetary gear assemblies in 16.6, 3.32, 0.665, 0.133 or 0.027 rpm speeds.

VISCOUS DAMPED

Type HS50D precision stepping motor has a unique fluid system resulting in a step function approaching critical damping. Speed of response and running characteristics are essentially unaffected by the silicone viscous damping fluid. Possesses characteristics of types described under PRECISION STEPPING on facing page.

SECTIONS 2100, 4000 AND 5600

SLO-SYN® *Preset Indexers*

TWO-AXIS
TYPE 2SP1800-4

SINGLE-AXIS
TYPE SP1800B-4

ABSOLUTE
TYPE SA1800-5

Used to control indexing of SLO-SYN bifil motors. The index angle, or position, can preset by dial setting on the control pan the number of 1.8° steps to be driven. Ha provision for actuating any external eq ment needed to perform related operati Index, jog and free run can be initiated m ually from the control panel or from an ternal switch. Can be made to cycle a matically with proper external switch Single- and two-axis models are availa with counting ranges to 99,999 steps. T axis models provide independent contro two SLO-SYN motors. Speed adjusta from 4 steps/second up to maximum poss with motor used. Optional backlash take circuit.

ABSOLUTE PRESET INDEXERS per either absolute or incremental position modes. In the absolute positioning mode, number set on the controls determines final position of the motor relative to starting, or "zero" point. When increme positioning is used, the motor will move preselected number of steps each time INDEX button is pressed. Optional backl take-up circuit.

SLO-SYN® *Translator*

TYPE ST1800B

Pulse-to-step converter designed for use with appropriate bifilar SLO-SYN motors converted for incremental stepping. Convert low level signal pulses or square waves into the correct switching sequence needed to step a SLO-SYN motor at 200 steps/revolution (1.8° per step). Input is 105-125 volts a-c, 1 ampere. Signal input impedance is 500 ohms. Used for programmed positioning, indexing and indicating operations.

SLO-SYN® *Adjustable Speed Drive*

TYPE ST1800BV

Essentially, SLO-SYN Adjustable Speed Drive type ST1800BV is a translator which includes a built-in oscillator to supply the triggering signals. Oscillator frequency can be adjusted to vary the speed from 4 steps/second up to the maximum permissible with the motor used. Direction of rotation can be controlled either from the front panel or from a remotely located switch.

SLO-SYN *Translator Module*

TYPE STM1800V

Plug-in circuit boards with logic ca bilities for stepping a SLO-SYN m in 1.8° increments. Type STM1800 basic translator which will provide directional motor operation. T STM1800V is similar but include built-in oscillator which can be adjus to drive the motor at speeds fron steps/second up to maximum at wh the motor will drive the load.

SLO-SYN® *High Speed Drives*

Translator

Drive SLO-SYN Precision Stepping Motors up to 2000 steps per second without losing any steps. Triggering the translator circuits is an internal oscillator which can supply a variable frequency range adjustable from 50 to 2000 steps per second. Triggering pulses can be supplied by tape readers, computers, oscillators, pulse generators and other signal producing equipment.

TYPE HTR400

TYPE HPR400R-5

Preset Indexer

Drive SLO-SYN Precision Stepping Motors in indexing and other positioning operations. Acceleration and deceleration circuits permit driving motors up to 2000 steps per second without missing any steps. Decade counter controls on front panel allow the operator to select any desired positioning increment. Optional backlash take-up circuit.

SEE OTHER SUPERIOR ELECTRIC PRODUCT PAGES IN SECTIONS 2100, 4000 AND 5600

We have the motor or actuator you have in mind.

We have all types of precision motors, precision gears, and gear trains for commercial and government end use in electronics, avionics, and aerospace industries. If you need a particular custom model, our engineering group is backed by a complete manufacturing capability to produce reliable, long-lasting products.

AIRCRAFT MOTORS—AC AND DC

Frames from 2" to 8" diameter. DC and 400 cycle AC. Outputs from 1/8 to 30 hp. Any required speed. Designed to military specifications. Can be equipped with gearheads and brakes, face or foot mounts.

Applications: Pumps, actuators, hoists, radar antennas, vane axial blowers.

AC Aircraft Motors. Diameters from 2" to 8". Outputs to 30 hp.

Model shown: 400 C.P.S. Self cooled, aircraft pump drive. 5" dia. by 6.00 LG, 3.0 hp. @ 5,600 rpm. Weight 12 lbs.

DC Aircraft Motors. Shunt, series or compound. Diameters from 2" to 6.5". Outputs from 1/100 to 10 hp.

Model shown: A 28-volt DC motor with radio noise filter, 6 hp at 6,000 rpm, used to drive a pump on a missile vehicle launcher.

TORQUE MOTORS

Typical Applications: Reel drive motors for magnetic tape transports and other closed servo loop systems such as antenna drives. (1) small time constant (2) fast response (3) high reliability (4) long life. Diameters up to 5⅜". Lock torque up to 2,000 oz-in.

Model shown: 5⅜" dia. by 10½" long, 28 VDC attachment for forced-air cooling, 5 VDC, 1,750 oz-in lock rotor torque.

SMALL MOTORS—AC AND DC

Typical Applications: Aerospace and ground systems equipment; drives for safe-arm devices, blower and fans, small actuators. Diameters as low as ⅞" in DC and 1.0" in AC. Can be equipped with gear reductions, brakes, clutches, governors and radio noise filters.

Small 400 cycle AC Motors. Five frames from 1" to 2" diameter. Induction and synchronous types. Any phase, voltage or speed.

Model shown: High-slip fan motor, 1 oz-in @ 10,000 rpm. 1.45" dia. x 1.87" long. Weight 8 oz.

Small Permanent Magnet and Wound Field DC Motors. Seven frames from ⅞" dia. to 2" dia. Outputs up to 1/8 hp. Speeds from 1,000 to 30,000 rpm.

MOTOR CONTROLS, INVERTERS, POWER SUPPLIES

We design electronic packages for optimum performance with drive motors of any voltage or frequency combination. Designed to meet the requirements of MIL-E-5400 and MIL-I-6181.

Airborne Inverter: Supplies power to two phase Induction Motor. Supplied as part of a Motor/Inverter package. Input: 28 VDC; MIL-STD-704. Output: 28 VRMS. Two Phase. 400 CPS Nominal Square Wave (Constant volt second output). 11 amps/phase nominal.

GEAR MOTORS—AC

Model shown: A 208-volt, 400 cycle gearmotor, 10.7 hp. @ 2,400 rpm, used on a heat exchanger. 23 lbs. weight.

GEAR MOTORS—DC

Model shown: 29 VDC two speed motor. 25 lb/in. @ 3,600 & 1,800 rpm. 6.6 lbs. weight.

HYSPERSYN SYNCHRONOUS MOTORS

Typical Applications: Computer memory drums; facsimile devices. Patented features offer high torque, efficiency, and power factor; excellent damping. Any frequency. Rotor-Stator sets or complete motors.

Hyspersyn: High starting, synchronizing and pullout torques; no drift. Diameters 2½" to 18". Outputs up to 5 hp.

ACTUATORS

Special actuators, AC or DC, linear or rotary, can be supplied to fit your requirements.

Model shown: A 115-volt DC motor with clutch, brake, noise filter, and gear box; output: 285-lb-ft @ 20 rpm; used on an antenna-drive system.

Model shown: 24 VDC four speed actuator. 1,000 oz-in @ 6,000, 3,000, 1,500, 750 rpm. Capable of reversing & shifting. Utilizes unique two speed motor. Weight 27 lbs.

Photoconductive Cells

This listing represents less than half of the Clairex standard and special photocells available. A 16-page design manual is available on request.

Photocell ordering abbreviation	Diam. X Length (inches)	Resistance @ 2 fc ± 33⅓%	Minimum resistance ratio from 2 ftc to Dark within 5 sec.	Maximum voltage	Power Dissipation @ 25°C (mw)
CL5M2	.55 X .18	55K	1:100	250	2000-500[1]
CL602	.25 X .5	1 meg.		300	75
CL702	.36 X .18	1 meg.		300	125
CL902	.21 X .15	1 meg.		250	50

Type 2 CdS (photosensitive material designated by last number in ordering abbreviation, i.e. CL5M2). Peak spectral response 5150 angstroms, bluest response photosensitive material, high stability, lowest temperature error.

CL503	.5 X .5	7.2K	1:10,000	250	500-250[1]
CL5M3	.55 X .18	7.2K		250	2000-500[1]
CL603	.25 X .5	133K		300	75
CL603A	.25 X .5	75K		300	75
CL603AL	.25 X .5	3.5K		170	75
CL703	.36 X .18	133K		300	125
CL703A	.36 X .18	67K		300	125
CL703L	.36 X .18	2.7K		100	125
CL903	.21 X .15	133K		250	50
CL903A	.21 X .15	67K		250	50
CL903L	.21 X .15	6.0K		100	50

Type 3 CdSe, peak spectral response 7350 angstroms, fast response, and very high light-to-dark resistance ratio. Can be used for high speed switching or counting. Sensitive to near infra red. For use with incandescent or neon lamps.

CL504	.5 X .5	1.5K	1:1000	250	500-250[1]
CL5M4	.55 X .18	1.5K		250	2000-500[1]
CL504L	.5 X .5	0.25K		170	500-250[1]
CL5M4L	.55 X .18	0.25K		170	2000-500[1]
CL604	.25 X .5	30K		300	75
CL604L	.25 X .5	1.5K		170	75
CL704	.36 X .18	30K		300	125
CL704L	.36 X .18	0.6K		100	125
CL904	.21 X .15	30K		250	50
CL904L	.21 X .15	2K		100	50

Type 4 CdSe, peak spectral response 6900 angstroms, lowest resistance photocells available. Can be used for "on-off" applications when low resistance is desired. For use with incandescent or neon lamps.

CL505	.5 X .5	9K	1:100	250	500-250[1]
CL5M5	.55 X .18	9K		250	2000-500[1]
CL505L	.5 X .5	1.5K		170	500-250[1]
CL5M5L	.55 X .18	1.5K		170	2000-500[1]
CL605	.25 X .5	166K		300	75
CL605L	.25 X .5	7.5K		170	75
CL705	.36 X .18	166K		300	125
CL705L	.36 X .18	3.3K		100	125
CL905	.21 X .15	166K		250	50
CL905L	.21 X .15	10K		100	50

Type 5 CdS, peak spectral response 5500 angstroms (closely matches the human eye), most stable, lowest memory photocell available. Can be used in light measuring applications and precision low speed switching. For use with incandescent, fluorescent or neon lamps.

CL705HL	.36 X .18	28K	1:1000	100	125
CL905HL	.21 X .15	100K		100	50
CL905HN	.21 X .15	700K		100	50

Type 5H CdS, peak spectral response 5500 angstroms (closely matches the human eye). Combines high speed, stability, linearity, and uniform color temperature response.

Photocell ordering abbreviation	Diam. X Length (inches)	Resistance @ 2 fc ± 33⅓%	Minimum resistance ratio from 2 ftc to Dark within 5 sec.	Maximum voltage	Power Dissipation @ 25°C (mw)
CL507	.5 X .5	7.2K	1:1000	250	500-25
CL5M7	.55 X .18	7.2K		250	2000-
CL607	.25 X .5	133K		300	75
CL707	.36 X .18	133K		300	125
CL707L	.36 X .18	2.7K		100	125
CL907	.21 X .15	133K		250	50
CL907N	.21 X .15	66K		100	50

Type 7 CdS, peak spectral response 6150 angstroms, moderate speed and ratio. used in general beam breaking applications. For use with incandescent, neon escent lamps.

CL707H	.36 X .18	500K	1:1000	300	125
CL707HM	.36 X .18	100K		250	125
CL707HL	.36 X .18	10K		100	125
CL907H	.21 X .15	600K		250	50
CL907HN	.21 X .15	300K		100	50
CL907HL	.21 X .15	24K		100	50

Type 7H CdS Peak Spectral response 6200 angstroms. Very fast decay time coupl low resistance and high linearity. Ideal for beam breaking applications.

Photocell ordering abbreviation	Diam. X Length (inches)	Resistance @ 2 fc ± 33⅓%	Minimum resistance ratio from 2 ftc to Dark within 5 sec.	Maximum voltage	Power Dissipation @ 25°C (mw)

MELPAR

Photoelectric Reader MODEL 150

Single Package . . . Miniaturized . . . Alignment Free

The light source, lens and photocell are contained in one highly compact unit that fully utilizes the advantages of detection by reflected light.

The patented lens system requires no alignment or adjustment, permitting delivery of Model 150 ready to use.

Features:

- Exceptionally small (0.6 cu. in.).
- Case dimensions, Front surface: 17/32" x 7/8" and length 1 11/32".
- Insensitive to ambient light.
- Versatile: Count, cue, sort, inspect.
- Rugged, Easily mounted, Low cost.

Photoelectric control

MODEL 155A & B

Transistorized Photoelectric Control Units provide high reliability at low cost for automatic control systems using Melpar's companion Photoelectric Readers. Models 155A and 155B are designed to operate with the Model 150 Reader. For most applications, the 155A is suitable, but for high sensitivity resolution or special applications the more sensitive Model 155B is available.

DETECTION OF FLUID LEVEL OR FLOAT LOCATOR

READING BLOCK MARKS ON CARDS

MOTOR AND SPEED CONTROL MONITORING

Photoelectric Reader MODEL 200A

Single Package Versatility . . . Long Distance Detection

MODEL 200A compact Photoelectric Reader, companion to the proven Model 150, is designed for use in automatic control systems where target detection at ranges from 1 inch up to 50 feet is required. Light source, single lens, and photocell are contained in one small unit that fully utilizes the advantages of detection by reflected light.

CUE, SORT, COUNT, INSPECT BY NUMBER, COLOR, SHADE, SIZE

Photoelectric control

MODEL 205A & AS

The Model 205A is used to operate the Photoelectric Reader Model 200A. All control units contain a power supply, amplifier and control relay in one compact plastic case.

Model 205AS is available for high speed counting rates and provides a pulse output.

COLOR DETECTOR

FOG AND SMOKE DETECTOR

pplications are limited only by your imagination.

stributor quantities are presently available for immediate delivery from Newark Electronics Corp., 500 N. Pulaski Road, Chicago, Illinois 60624.

Source for Optoelectronics—SENSOR TECHNOLOGY

DISCRETE DEVICES

MICROMINIATURE PLASTIC PHOTO-TRANSISTORS

Clear plastic encapsulated photo-transistors for high-density-mounting applications such as: punched card and tape readers; shaft encoders; pattern and character recognition systems; inspection equipment; counters; sorters; switching and logic circuits. Their small size and flat leads afford maximum design flexibility — close spacing. Available with or without external "base" leads, they are sensitive throughout the visible and near-infrared spectrum. Custom arrays can be fabricated to meet most any requirement. And, they can be matched to assure uniform sensitivity and close tracking parameters.

SPECTRA-555 "BLUE" SILICON CELL

Its peak response is at 555mμ (the "blue-region"), which corresponds to that of the human eye and selenium cells. Ideal for color and recognition systems, it does not require bias power for photovoltaic action. Other uses include: colorimetry, flame spectroscopy, spectrometry and light separators. Three times more sensitive than selenium, the Spectra-555 is an optimum choice for illumination and exposure meters as well as optical sound track transducers. Its low noise minimizes spurious signals, and it can be mounted in a multitude of packages to fit specific requirements.

SILICON SOLAR ENERGY CONVERTERS

Excellent photovoltaic components for systems feature high reliability, instant response, and long life characteristics. No other power supplies needed. Amplification of cell output immediately gained with simple transistor circuitry. Normally used in the following categories: A) photo-electric where control mechanisms are activated by light. B) power for converting light directly into DC power or storing in rechargeable batteries. C) read-out when "read-out" information from punched cards and tapes is obtained by cells arranged in mosaic patterns.

ULTRA CELL®

New silicon photovoltaic devices with remarkable reverse leakage and speed of response. Available in all physical geometries presently supplied for devices with normal characteristics. Improves, sometimes even makes practical, applications using single cells, arrays or groups of cells.

Reverse Leakage: 2μA@—5.0VDC Speed of Response: 1—3.5μSec.

EDGE-CONTACT SILICON PHOTOVOLTAIC READOUT CELLS

Electrically identical to common top and bottom contact types, but with new and distinct advantages: smaller size by attaching to side of active area and saving valuable light conversion area, easier to mask, closer positioning to light sources, easier to mount accurately. Flat unobstructed surfaces permit designs previously impossible, with more efficiency and lower cost. Available with any number of segments up to 1.5" total length (nine segments). Ideal for applications such as punched card, punched tape and related readers as well as rotary pulse generators, encoders and the general line of optical transducers where close spacing of the input mechanism is necessary.

ASSEMBLIES AND SYSTEMS

PHOTO-TRANSISTOR CARD AND TAPE READER ASSEMBLIES

Standardized dual-inline packaged photo-transistor arrays developed for economical handling and mounting in computer peripherals and data processing systems as well as industrial production control and switching designs. The transistors are electrically isolated from each other and mounted on 250-mil centers, in the case of the "Card Reader" units (100-mils for the "Tape Readers"). They can directly interface with DTL, RTL or TTL circuits. Sensitive over the visible and near-infrared spectrum, their characteristics remain stable even under high humidity and rugged environmental conditions.

SPECIALIZED SYSTEMS... INCLUDING FIBER-OPTIC SENSORS

Off-the-shelf and custom designed solutions to optoelectronic sensing problems. Small or large quantity requirements — photovoltaic or photoconductive modes — compatibility with high-speed logic ICs, Sensor Technology is geared to provide optimum and economical answers to unique requirements. For example, our capabilities range from fiber-optic interfacing networks to complete readout systems, including amplification and biasing, customized packaging and matched componentry...all assembled and tested under one roof, saving you in-house processing and piece-parts inventory costs.

SILICON PHOTOCELLS FOR READOUT ASSEMBLIES

Offer distinct advantages over other photocells because of short transient response time. Function over extreme temperature ranges without affecting built-in characteristics. Feature low impedance output for matching transistor input networks. Also provide excellent speed of response, stable output characteristics and low noise output for application to perforated tape readers, punched card data systems, analog-to-digital encoders, shaft positioning equipment, and industrial control systems. Available in numerous cell forms and specialized packages for any need.

CUSTOM HYBRID CIRCUITS

Sensor Technology can produce thin-film hybrid circuits according to a wide assortment of customer specifications. All phases of production, from thin-film layout to production and testing, are undertaken at our plant by a highly qualified staff. Both epoxy molded and hermetically sealed packages are available.

Typical Twelve Position Card Reader

CUSTOM PHOTOVOLTAIC THIN-FILM READOUT ASSEMBLIES

Provides the system designer with previously unavailable capability in the area of light sensitive arrays. Features small size, modular layout, intimate sensor/amplifier connections and adaptability of the entire unit to most forms of optical housing. Reduces the complexity of final product design. Initial amplifiers are DTL or TTL compatible. Complete opto-hybrid subsystems possible.

Power Requirement: +5V ±.25V @ 5mA/circuit. *Switching Time:* 1μs or less from full off to full on. *Light Level:* 500 foot candles. *Operating Temperatures:* —25°C to +80°C Non-operating temp. —55°C —100°C.

ROAD-RANGE EXPERIENCE AND CAPABILITIES

Sensor Technology's extensive design and engineering staff can meet the most exacting demands for creativity and adaptability. Their know-how spans the entire electromechanical and solid-state technologies. Let them innovate an optimum solution to your optoelectronic problem; whether it be a "special", a variation from our standard lines, or a completely unique development to fit custom requirements.

STANDARD SERIES PHOTODETECTORS

Photodetector Features for all UDT Models

- ☐ SPEED TO 4 NANOSECONDS
- ☐ MAXIMUM SENSITIVITY
- ☐ BROAD SPECTRAL RESPONSE
- ☐ ACTIVE AREAS TO 8 CM²
- ☐ LOW DARK CURRENT

GENERAL NOTE

UDT's broad line of high performance PIN photodiodes are constructed with both planar diffused and Schottky barrier technology. A "D" after the model number classifies the detector as diffused. All other types are Schottky barrier. Refer to UDT literature for application areas of these two types. UDT's standard series of detectors are circularly configured and mounted in specially formed anodized aluminum housings terminated to a BNC connector or mounted on JEDEC standard T0-18, T0-5, T0-8 stainless steel headers with hermetically sealed window cans. Ultra low leakage currents and ultra low capacity at full depletion applied voltage are characteristic of UDT PIN Photodiodes. Large area, low capacity, high performance devices are unique with UDT.

SPECTRAL CHARACTERIST
OF SCHOTTKY PHOTODIOD

LIGHT POSITION SENSING PHOTODETECTORS

	PIN SC/10	PIN SC/25
Mounting Diameter (O.D.)	.975"	2.225"
Active Area Dimension (L)	.4"	1.25"
Active Area	.16 in.	1.56 in.

SPECIFICATIONS

UDT No.	Area (cm²)
SC/10	1.0
SC/25	15
LSC 2"	3.2
LSC 4"	6.4
LSC 9"	14.5

United Detector Technology light position sensing d sensitive silicon photodetectors that give two electri signals. One corresponds to the position of a light s surface and the other corresponds to the intensity o spot.

The single axis LSC series offers position sensing ove lengths of ½, 2, 4 and 9 inches. Non-standard length able on special order.

The two-axis SC-10 and SC-25 detectors provide positi over a 0.4 and 1.25 inch square area respectively.

Position sensitivity is 0.2 microamperes/milliwatt/mill lution of one millionth of an inch and linearities bette

Both single and dual axis models offer all the adv United Detector Technology's high quality line of stand Schottky barrier photodetectors.

CUSTOM ENGINEERED PHOTODETECTORS

The Schottky and planar diffused technologies employed by United Detector Technology are very readily adaptable to new geometries and to modified characteristics. Many specialized photodetectors have been designed for our military and industrial customers, and in many cases without the high cost of custom engineering. An optimum choice of basic detector design can be made from UDT's broad base.

Geometries possible include lengths to 10 inches, widths to 1 inch, diameters to 2 inches. Linear arrays with densities up to 200 elements per linear inch. Single element size down to 6 mils. A variety of mounted schemes are available.

Special characteristics include U.V. response from 1000Å to 3000Å, greater than 10% of maximum. Capacitance at 90 volts less than 30 pf/cm. Quantum efficiency at 1.06 micron greater than 50%; at 1.15 greater than 10% with I.R. enhancement.

DIGITAL LIGHT MEASURING INSTRUMENTS

LASER POWER METER

- 4-digit readout (microwatts—milliwatts—watts)
- Detects any 3 preselected monochromatic colors or white light 10^{-9} to 10^{2}
- $840. includes detector, bench-mount, filter holder and carrying case
- BCD or analog output

Both the Laser Power Meter and the Photometer feature the following unexcelled characteristics

- 5% calibration accuracy traceable to NBS standard
- 0.1%, 24-hour stability—1% stability for 6 months
- 90% overranging on each of 6 ranges

PHOTOMETER

- 4-digit readout (footcandles, footlamberts, μwatts/cm²)
- 10^{-3} to 10^{4} footcandles range
- BCD or analog output

$925. includes detector, mount, cosine receptor, factory calibration, photopic filter and carrying case

PHOTOVOLTAIC CELLS

Photovoltaic cells start with a layer of selenium onto which a junction of CdSe is formed. A subsequent layer of CdO or Au acts as a current collector. The two types are specified as A for the Au layer and B for the CdO type. B is high output for low light and best for use with amplifier. Specify A or B after part number, e.g. S100 EB.

NOTE: Unmounted Cells less than .045" thick

NOTE: Microampere output based upon cell temperature of 75°F., color temperature 2850°K, 100 foot candles, 150 ohm load. Bulletin SPV4B shows complete line.

PAM-1 PHOTOCELL AMPLIFIER MODULE
The Vactec Photocell amplifier module (PAM) consists of a matched selenium photocell and a high gain operational amplifier. All solid state unit replacement for phototube and associated amplifier or multiplier.

Specifications

Input	± 15 VDC; + 15 ma max.
Output	0-10 VDC; 2 K min. load resistance (1)
Response Time	100 u sec.
Photometric Response (min. with 2850° K Source)	6u V/fc/ohm

(1) Load resistance is the parallel combination of feedback and external load.

PHOTO VOLTAGE MULTIPLIER PVM-1
Converts the selenium photocell to a stiff curren source; load current independent of load resis.

Input	3-15 VDC @ 200 uA Load Current
Output	Input minus 2 V.
Response	As fast as 10 u sec. with small cells.

BULOVA LIGHT CHOPPERS/SCANNERS

APPLICATION AREAS

- Bolometers
- Burglar Alarm Systems
- Colorimeters
- Densitometers
- Horizon Sensors
- Information Storage systems
- Intrusion Systems
- Ion Beam Choppers
- IR Detectors
- Mass Spectrometers
- Radiometers
- Spectrophotometers
- Star Trackers
- Telemetry Systems

A NEW CONCEPT OF LIGHT MODULATION THAT OUTMODES MOTOR DRIVEN TYPES

Light choppers and scanners are used to chop light and energy beams, switch a radiation source to two or more s switch two sources alternately to one sensor, scan an area radiation source, and for many other purposes. Based up balanced vibrating members of a tuning fork, optical chopper outstanding advantages over motor driven types. **Features:** • requirements as low as 500 mw • No lubrication needed • No parts • Lightweight—½ to 3 ounces maximum • Reference voltage available • Small size—as small as ⅝" x ⅜" x 1 5/32".

TORSIONAL TYPE

L44 for frequencies 100 to 600 Hz
L45 for frequencies 600 Hz to 10 KHz

A fixed frequency device which can, in its simplest form, be used to cause a light, or energy scan a target in a harmonic manner.

SPECIFICATIONS

Fixed Frequency Hz	Angular Amplitude Peak to Peak*	Maximum Mirror Size MM
100	20°	30 x 30
200	14°	20 x 20
400	10°	15 x 15
800	7°	10 x 10
1000	6°	10 x 10
2000	5°	7 x 7
4000	4°	7 x 7
6000	3°	5 x 5
10000	2°	2 x 3

*Angle is doubled upon reflection.

Maximum angular velocity in degr second is $\pi f \theta$.

ACCURACY: Normally ±2%; better on

REFERENCE SIGNAL: Squared wave; min. into 50K ohms.

OPERATING TEMPERATURE: −5 +85°C. Other ranges available.

INPUT: Approx. 400 mw at 24 to Driver Amplifier for 115V AC also a

TAUT BAND TYPE L-50

A mechanically resonant device in which the restoring a taut ribbon. Power to start and maintain the oscill furnished by a solid state driver powered from d.c., optional 110V AC drivers are also availab

Freq. Range HZ	Mirror Angle Peak to Peak	Stock Mirror Size
5 to 24	30°	25 x 25 MM

dynarad INC is first in infrared

Fast-Scan Infrared Camera Model 201, 202

Offers the lightest, highest speed, general purpose infrared system available. The camera measures the temperature of a target within a 10° x 10° field of view and presents these measurements on the face of a cathode ray tube at an effective rate of 60 frames per second, thus providing a real time television-like display. The system comprises two separate packages: a tripod-mounted IR camera and a display unit.

Fast-Scan Infrared Microscopes with Laser Accessories Models 301, 302, 303, 304

The Model 300 series fast-scan infrared microscopes consist of a stand-mounted high-speed, fast-scanning, infrared microscope head and image display unit with laser illumination capability. The microscopes provide an instantaneous resolution of .001" at a line rate of 40 lines per frame and an effective frame rate of 60 frames per second, thus providing a real time television-like display. The field of view is 1 square millimeter.

The optical scanning and detection head weighs under 10 lbs. and is only 180 cubic inches overall. It is mounted on a stand allowing for both coarse and fine focusing adjustments. A coaxial viewing channel is provided within the optical head for focusing and general target observations. An x,y micro-positioner mounted on the base of the stand allows for orientation of the target field.

Infrared Line-Scanners and Displays Models 401, 402 and 403

The Model 400 series infrared line-scanners measure the temperature of a target within a field of view and present these measurements as an analog trace on the face of a cathode ray tube at a rate of at least 60 lines per second, thus providing a flicker-free image. The Model 403 provides a very high repetition rate of 3000 lines per second for special applications. Each system is comprised of two separate packages: a tripod-mounted IR scanner and a display unit. The display allows the use of an intensity marker for accurate temperature measurement of the object surface.

Fast-Scan Infrared Microscopes Models 501, 502, and 503

The Model 500 series infrared line-scanning microscopes are the only general purpose devices of their type. The scanners measure the temperature of a target within a scan line and present these measurements as a flicker-free analog trace on the face of a cathode ray tube at a rate of at least 60 lines per second. The difference in the three models lies either in the width of the scan line or the repetition rate. Each system comprising an optical scanning detection head and a display unit, provides a spot size of 0.001 inches and is in two separate packages. The display allows the use of an intensity marker for accurate temperature measurement of the object surface.

The Compare System

COMPARE (**C**onsole for **O**ptical **M**easurement and **P**recise **A**nalysis of **R**adiation from **E**lectronics) is an infrared detecting system which automates the trouble-shooting process for electronic circuits and assemblies.

The COMPARE SYSTEM scans electronic circuits and other targets, providing a digital readout based on the observed thermal pattern. The radiometer measures the temperature of the individual components, stores the data, and then matches it to previously stored patterns. Testing, trouble-shooting and maintenance are reduced to pattern comparison and recognition.

The basic system consists of an infrared scanning radiometer, rotary feed table, control console, and electronic data processor. Optional electronic data processing equipment is available for specialized applications.

PEK HIGH INTENSITY

LOW POWER SHORT ARC LAMPS

MERCURY

Mercury short arc lamps provide one of the most efficient light sources available. Most sizes can be operated on AC or DC input power and can be low-frequency modulated. Spectral distribution is especially useful in the ultra-violet and visible portions of the spectrum. The compact arc size allows more flexibility in optical design.

Lamp No.	Rated Power (W)	No. Electrodes	Arc Size (height x width; 10^{-3} in.)	Avge. Luminance (cd/cm²; x 1000)	Luminous Flux (Lumens)	Luminous Efficiency (lum/watt)	Avge.** Life (hrs.)	List Price

500-4	500	3*	155 x 90	22	22500	45	300	[illegible]

APPLICATIONS: Oscillography • Photoresist exposure • Microscope illumination • Diazo exposure

XENON

Xenon short arc lamps provide a spectral distribution approximating that of natural sunlight, with an equivalent color temperature of approximately 6000°K. The lamps feature compact arc size, instantaneous operation, and excellent modulation characteristics. The extremely small arc size allows optimum design of optical systems.

HIGH POWER SHORT ARC LAMPS

PEK high power xenon short arc lamps feature rugged ribbon-seal construction, providing maximum security against vibration damage and high reliability under the most severe environmental conditions. The spectral radiation of this series is comparable to the smaller xenon short arc lamps but exhibits increased continuum radiation and a broadening of spectral peaks.

Lamp No.	Rated Power (W)	No. Electrodes	Approx. Arc Size (height x width; mm)	Avge. Luminance (cd/cm²)	Luminous Efficiency (lum/watt)	Luminous Flux (lumens)	List Price

X-20KW	20,000	2	12.5 x 6.0	300,000	57	1,150,000	[illegible]

APPLICATIONS: Searchlights, military/commercial • Illumination systems • Environmental testing • Solar simulation • Projection systems

XENON FLASH LAMPS

Recognized experience in short arc high intensity light sources enables PEK to provide the customer with the flash lamp design that best suits his operating requirements and environment. PEK incorporates design and production options into the final lamp construction to provide maximum life and reliability under given operating conditions.

Tubing material/size • Gas fill pressure/mix • Electrode configuration/material • Seal design • Tube shape • Luminous length • Base configuration • Triggering method • KRYPTON fill available for Nd: YAG laser systems.

HELICAL FLASH LAMPS

LINEAR FLASH LAMPS

APPLICATIONS: High speed office copiers • Laser pumping • Photography • Flash photolysis • Flashing beacons • Airport systems

MERCURY CAPILLARY LAMPS

PEK Mercury Capillary Lamps provide intense radiant energy which extends from the ultra-violet through the near infra-red wavelengths, with primary energy concentration in U.V. wavelengths. A wide selection of arc size, radiant power, and mounting methods are available. Input power capabilities range from 500 watts through 4 KW, with special lamps available on request. Write for data sheet 301-1.

APPLICATIONS:

Therapy • Photochemistry • Biology • Photoresist Exposure • Medicine • Photo Reproduction • Color TV Tube Production

POWER SUPPLIES/COMPONENTS

Power supplies and components specifically designed for lamp operation are available as standard units and in custom designs. Many standard units are manufactured in volume to provide laboratory and production line systems. In addition to power supplies, the PEK line includes trigger units, pulse generators, starter units, and power components. PEK welcomes all customer inquiries with regard to light source related electronic requirements. We have a well qualified engineering staff available to help solve unique customer problems.

TYPICAL ELECTRONIC UNITS

Model No.	Appl. Lamp Type	Description	List Price
401A	Short Arc	75w Xenon/100w Mercury, DC	345.00

252	Flash Lamps	Pulse Generator	935.00

CUSTOM SYSTEMS

Knowledge of lamp capabilities is essential to good design of lamp driving systems. PEK, Inc. long recognized as a leader in the design of arc lamps, unites its extensive knowledge of lamp design and performance with an imaginative, experienced electronics engineering capability to deliver designs for custom specifications. The unique matching of systems specifications and lamp performance characteristics cannot be attained by isolated design of the system. Only when the electronics are designed with a complete understanding of the lamp design will the final product provide the light output that is required, while assuring the ultimate in reliable operation and long lamp life.

Typical applications include high and low powered laser pulsing systems, single and multiple unit flash lamp systems, short arc continuous and pulsed duty systems, and programmed light systems. PEK utilizes standard electronic products, such as pulse generators, power supplies, and triggering units, as subassemblies, to provide a more reliable system, with less setup, than to design the system and fit a lamp into the completed unit.

The Symbol of LIGHTPOWER

From the IMAGINATIVE producer and problem-solver in electro-optics:

Mercury and xenon lamps, light projection systems, power supplies, advanced exposure systems...and fresh design approaches to your special requirements.

Mercury Short Arc Lamps Outstanding features: extreme arc stability, intense source of ultraviolet and visible radiation, performance proved reliability, constant lumen output throughout lamp life.
Operating characteristics: 100 to 500 watts; 2,000 to 30,000 lumens. Model numbers: iii-107, iii-110, iii-610, iii-660, iii-200-2, iii-200-3, iii-202, iii-203, iii-350, iii-500-2.

Xenon Short Arc Lamps Outstanding features: ultra arc stability, intense sources of ultraviolet and infrared radiation, history-proven reliability, capable of continuous, modulated or pulsed operation.
Operating characteristics: 35 to 300 watts; 600 to 7,500 lumens.
Model numbers: X-35, X-36, X-50, X-75, X-76, X-150, X-200, X-300, X-80, X-160, X-310.

Xenon Flash & Strobe Lamps Outstanding features: seal integrity, extended life, reliable triggering, high conversion efficiency.
Operating characteristics: 8 to 18,000 joules, glass to metal seals and solder seals; output of 15 to 50 lumen-seconds per joule input.
Model Numbers: F-38, F-38-U, F-42, F-81, F-47, F-47-U, F-70, F-60, F-90, F-91, FRT-6, FFT-6, FRT-76, Mini Strobe.

Lamphousings Outstanding features: 2″ or 3″ optics, positive linkage focusing adjustment in X-Y-Z axis, spherical rear mirror, detachable backplate for ease of lamp installation and prefocusing.
Operating characteristics: will hold 35 to 350 watt short arc lamps, pyrex or quartz optics, collimated light, integral filter sets.
Model numbers: LH-350, LH-350 Quartz, LH-360 W, LH-360 WO, LH-370, LH-370 Quartz.

Power Supplies Outstanding features: constant power to lamp throughout lamp life, solid-state, rugged design, low current ripple, ample starting energy to restart hot lamps.
Operating characteristics: 35 to 500 watts; integrated starter circuits, DC output, 50 or 60 cycle and 117 to 220 volts.
Model numbers: CA-35, CA-75/100, CA-150, CA-200, CA-350, CA-500, CA-610, modulators.

Ultraviolet Exposure Systems A new line of equipment especially engineered for printed circuit production and chemical milling. Advances include faster exposure rate; improved resolution; independent, self-sealed, two-sided vacuum frames; choice of production volume and automation features in three systems packages: **iii Mark I**, **iii Mark II**, and **iii Mark III**.

Custom Design Capability Illumination Industries has assembled an engineering and manufacturing staff with a depth of experience unequalled in the industry. We are anxious to apply their design talent to the solution of your most challenging electro-optical problems.

GENERAL INFORMATION

- All switches sealed in inert gas.
- Switching speeds in low millisecond time.
- Contact material Di-Met, DIFFUSED GOLD, RHODIUM and Mercury to Mercury.
- Maximum Initial Contact Resistance .05 to 0.2 ohm Dependent on Selected Contact Material.
- Relays available with magnetic and or electrostatic shielding.
- Special relay assemblies to customer specifications.

For additional specifications or special design applications, contact factory or nearest sales office.

We Manufacture Reed Relays to Customer Specifications.

SERIES 100 RELAY

ORDERING INFORMATION:
A single pole single throw reed relay with a 24 vdc coil and 50 watt contacts would be specified as part number 100F-24.

COIL DATA

Drive Voltage	D.C. Coil Resistance ±10%
6	120 Ohms
12	450 Ohms
24	1600 Ohms
48	5700 Ohms

AWNA-2600	2 Form D	200	3.200"	1.100"	.7[illegible]

Note: Available with Single or Dual Coils

*Above board, Pins 1/8" [illegible]

Series MWCX/MWDX & AWCX/AWDX - Form C & Form D Sensitive

PRINTED CIRCUIT

AWCX-16000: SPDT, Form C, non-bridging (single-side-stable or bi-stable)

AWDX-15000: SPDT, Form D, bridging (single-side-stable or bi-stable)

PLUG-IN

MWCX-16000: SPDT, Form C, non-bridging (single-side-stable or bi-stable)

MWDX-15000: SPDT, Form D, bridging (single-side-stable or bi-stable)

CHARACTERISTICS

Contact Rating: 2 amps. max. 500 volts max. 100 volt/amps. max.
Bounce: None
Life: One billion operations with contact protection.
Sensitivity: Single-side-stable: 45 amp. turns. Bi-Stable: 21 amp. turns.
Stand Off Voltage: 1000 VAC 60 cps.
Insulation Resistance: 1000 megohms min. at 500 VDC.
Coils: Single or dual wound.

Type MWP - Polarized

MWP 16000

Contacts: 1 Form D, bridging type.

Permanent Magnet Adjustment: The MWP relay's permanent magnets may be adjusted over a wide range of operating characteristics.

1. Single-side-stable adjustment: Standard operate adjustment — 70 to 110 amp. turns.
2. Bi-stable adjustment: Standard adjustment ±35 amp. turns.
3. Chopper adjustment: Adjusted for equal dwell time when driven by 60 CPS sine wave at specified voltage.

Type MWS - Sensitive

TYPE MWS

MWS-16000: 1 Form C, non-bridging Sensitivity: 9 milliwatts

MWSL-16000: 1 Form C, non-bridging Sensitivity: 5 milliwatts

Available in single-side-stable, bi-stable or chopper forms.

TYPE MWSL

Special Mountings

Adlake mercury displacement relays are available with special mounting arrangements. Our engineering department is ready to assist in developing ideas to fit your needs. Shown are just two of the many variations available.

1133-87FB Type Three-pole power relay with terminal block mounted on front of iron circuit. 30 ampere contacts illustrated. Can be equipped with time delay contacts.

1123-100FT Type Two-pole power relay with feed-through type terminal block mounted on front of iron circuit. 30 ampere contacts illustrated. Can be equipped with time delay contacts.

Life At rated load Dry circuit	20 x 10^6 operations 500 x 10^6 operations	20 x 10^6 operations 500 x 10^6 operations
Temperature range	—50°C to +105°C	—50°C to +105°C
Vibration	10 G at 10-55 CPS	10 G at 10-55 CPS
Shock	15 G (min)	15 G (min)

Advantages of Adlake Dry Reed Relays

a. Non-magnetic inter-connecting pins for printed circuit board insertion can be bent, cut, etc. They also relieve stresses and prevent breakage of glass-metal seal if board is flexed. This assures maintenance of operating characteristics.
b. Molded ledge is extra thick with two sides giving additional rigidity for further structural protection of switch seals.
c. Each switch is housed in its own cradle.
d. Standard connection of switch lead to pin is soldered.
e. Bobbin ledge has additional pin holes available for various grid spacings.
f. Contacts are rhodium plated for higher load and longer life characteristics.
g. Magnetic shielding layer prevents interaction from other flux - generating, electrical apparatus.

ALCOSWITCH®

DIV. OF ALCO ELECTRONIC PRODUCTS, INC.

ALCOSWITCH LOW-VOLTAGE RELAY

FR-101 SPST
FR-102 SPDT

For safety's sake, control circuits should be isolated from power lines and operated at low voltages such as those obtained from a battery or from any **ALCOSWITCH RELAY** described on this page. Several case styles are available, each incorporating similar electrical characteristics and they all perform the same function, but vary in shape to fit your particular needs.

FR-101, FR-102 and FR-105 are permanently wired and occupy a minimum of space in equipment or appliance. **FRE-103** is a self-contained model that readily adapts to a standard AC outlet receptacle for experimental or for quickly assembled remote-control circuit applications. **FRP-104** is the plug-in model which makes use of a standard octal mount and is designed for electronic equipment which requires ready accessibility for ease of maintenance.

FRE-103 SPDT Plug-In

All units are capable of handling up to 7 Amps @ 117 VAC and may be operated from remote switches located up to several hundred feet away. The remote circuit carries a low voltage which is fully isolated to minimize any possibility of shock hazards.

These models illustrated represent "stock relays" available for immediate application, but they may also be supplied with modifications for your special or custom use.

FRP-104 SPDT Octal

SPECIFICATIONS

Operating Voltage:
80-125 VAC 60 Hz
Primary Coil Current:
Below 40 mA
Secondary Voltage (open):
Below 30 volts
Contact Voltage:
95-125 volts
Insulation Resistance:
Over 30 megohms @ 500 VDC
Dielectric Strength:
One minute @ 1200 VAC
Coil Temperature Ascent:
Under 158°F.

Load —	**FR-101:**	6 amps (pwr Factor 1)
		5 amps (pwr Factor .75)
	FR-102:	7 amps (pwr Factor 1)
		5 amps (pwr Factor .75)
	FRE-103:	7 amps (pwr Factor 1)
		5 amps (pwr Factor .75)
	FRP-104:	7 amps (pwr Factor 1)
		5 amps (pwr Factor .75)
	FRP-105:	7 amps (pwr Factor 1)
		5.5 amps (pwr Factor .75)

FR-101-230, FR-102-230 & FR-105-230 are 230V Types at 50% of rated power

SCHEMATIC DIAGRAM For FR-101

Model	Maximum Control Circuit Resistance
FR-101	1300 ohms
FR-102	300 ohms
FRE-103	400 ohms
FRP-104	150 ohms
FRP-105	280 ohms

FR-101 SPST BASIC relay has a primary and secondary as a step-down transformer, and a third winding acting as a low-voltage relay. 6-inch pigtail leads extend from the inner core to beyond the polypropylene cover. The inner core measures 1¾" long x 1⅛" wide x 1" high. The basic relay is recommended for installations within the equipment housing. Available for 117 VAC or 230 VAC operation.

FR-102 SPDT BASIC relay has a SPDT feature and is similar in appearance to the FR-101, but slightly larger. The main difference is the core construction where the FR-102 has two coils — a primary and secondary. When the secondary is shorted, the primary and associated outer core turns into a relay. Complete with dust-proof case and 6-inch pigtail leads. The FR-102 core assembly is the basic unit for all other relays described below. Available for 117 VAC or 230 VAC operation.

FRE-103 SPDT PLUG-IN relay has a stylized plastic case holds the laminated core inside and also has a patented three-way receptacle on the top portion that allows selection of either a Normally Open or Normally Closed circuit. A side jack serves as a plug-in for a remote switch or sensor. The plug-in capability enables the user to insert the ALCOSWITCH RELAY FRE-103 directly into an AC wall outlet. No other wiring is necessary other than the addition of the remote switch and cord attached to a plug. Complete to operate with plug; less cord and remote switch.

FRP-104 SPDT OCTAL base plug feature is added to the basic ALCOSWITCH RELAY for the industrial user. Wiring is not required for the FRP-104, only for the socket mounted in the panel or equipment. The FRP-104 is protected by a clear-view plastic dust cover. The neat finger-gripping size unit easily plugs into an octal socket for horizontal or vertical installations. The plug-in model makes use of a standard octal mount and is designed for electronic equipment which requires ready accessibility for ease of maintenance.

FR-105 SPST BASIC is similar to the FR-102 in specifications and application, but more compact in width and depth. The black plastic molded case is contoured to conserve space. Equipped with normal 6" leads. This particular unit is generally available from stock and could be tailored to customers' particular needs.

Model	Contacts	Description	One-99	100-499	999-999
FR-101	SPST	Basic Relay for 117 VAC	3.85	3.01	2.62

FRE-103	SPDT	Plug-in	4.95	3.82	3.37
FRP-104	SPDT	Octal	5.45	4.25	3.71
FR-105	SPST	Basic Relay for 117 VAC	3.85	3.01	2.62
FR-105-230	SPST	Basic Relay for 230 VAC	4.25	3.32	2.89

CERAMIC TERMINAL STRIPS

Ceramic-base terminal strips with fired silver, copperplated and tinned terminals to facilitate high-temperature soldering of components and leads. Features permanent bond between metal and ceramic. Standard 2-56 threaded studs are extra long for cutting to any required dimension. Board ht. 0.590" from base. Depth of slots, 0.197". Dielectric Strength: more than 10 seconds at 1500 VDC between terminals. Insulated Resistance: over 1000 megohms at 500 VDC megger. Dip Solder Test: no exfoliation at 250°C for 5 seconds.

Type MB relay

TYPICAL SHOT: TYPE MB for direct pcb mounting

★Compact size and longevity,
★Excellent switching capacity,
★Mounting flexibility,
★Durability against environment.

BASIC STRUCTURE

a) Twin contacts
b) End-On armature type
c) Spring assemblies are arranged sideways and card driving lift-off system is adopted

MATERIALS

Enclosure: Clear plastic cover
Terminals: Brass with solder overlay
Contacts:
Moving contact: Alloy of silver and palladium with gold overlay (Ag—40% Pd—60%)
Stationary contact: Alloy of silver and palladium (Ag—40% Pd—60%)

DIMENSIONS (unit: inches)

OPERATE, HOLD AND RELEASE

TIMING DEVICES

SOLENOIDS

General purpose relay designed for low cost, dependable switching of control circuits. Small, rugged, highly efficient with switching capacity to 10 amps and 3PDT contacts. Available with hermetically sealed, plastic or metal plug in enclosures; metal dust covers for chassis mounting; solder lug, quick disconnect and pc board terminals. Wide range of coil voltages. Bulletin R 301

RE

TIME CAPSULE

NEW two terminal solid state AC timer. Economical for many industrial applications. Bulletin T 212

KLA, KLG

Light weight pact solenoids the economi frame desig both contino intermittent They are ide AC (to 220 DC (to 110V) cations in aut equipment re up to twenty force. Applic include: ve machines, re equipment, an ness machine be furnished f temperature ents and in range of pl styles. Suffix A type; Suffix G- type. Bulletin

DSA, DSG

RW

Ruggedized industrial relay, totally enclosed, engineered for long life. Terminals for plug in with socket or printed circuit board connections; bracket mounting for quick disconnect or soldered wire connections. SPDT, DPDT, 3PDT contacts; wide range of coil voltages. Standard 5 amp contact; 10 amp available. Bulletin R 308

428

Industrial TDR, featuring the optimum in economy and flexibility. Various fixed or adjustable timing ranges. 2% repeat accuracy. Bulletin T 204

EH

EL, ELA

RH

Specifically designed for maximum economy, these units are slightly larger than the RE series. They feature 10 amp standard contacts; 15 amp available. Any combination of contact configurations through 9 PDT. Dependable operation assured by nylon blade lifter. Metal dust covers and hermetically sealed enclosures. Quick disconnect terminations (.110, .187, & .250) available. Bulletin R 302

.025 to 300 second fixed time delay. DC companion to Time Capsule. Full 2 amp solid state output. 3% repeatability; broad operating voltage in one unit, priced under $5.00 in quantity. Bulletin T 211

437

Cylindrical solenoids offering close spacing and extra long life for both continuous and intermittent duty, these miniature solenoids are used where forces required are less than 50 ounces. Their applications include data processing equipment, such as tape-fed automatic operation of business machines, pen-lifting duties chart recorders, and flag-raising on in ment panels for warning purposes. O tion to 125 V DC. Available with thre bushing or "C" ring mounting. Bul S 402

EP, EPA

PJ

A Power relay engineered for extra long life at loads to 25 amperes with DPST or DPDT contacts. Operates from any voltage to 240 volts AC or DC. 120 VAC in stock. Auxiliary contacts available. Bulletin R 304

490

Digital Timing Control. 000.1 to 9999 seconds, with extreme accuracies; economical. This is a completely solid state digital timing control capable of delay on pull in or delay on drop out. Operates from 115 VAC Power. Bulletin CC 605

FA

Box frame sole specifically desi for efficient DC eration up to Volts. Actuator fo from 7 oz. at stroke to 125 ou seated intermit Continuous o forces proportio less. Bulletin S

RELAYS AND SOLENOIDS

ERES AZ 530-THINPAK™ MINIATURE RELAY

FEATURES

- 0.415" high for 0.6" standard pc board spacing
- Up to 2 Amp SPDT contacts
- 0.1" Terminal Grid spacing
- Insulation resistance greater than 10^{10} ohms
- Contact resistance less than 50×10^{-3}
- No phenolic insulation used

GENERAL DESCRIPTION

The AZ miniature THINPAK relay, Model 530, was den designed for applications with either demanding space limitations, such as 0.6" center-to-center PC card mounting, or operating requirements that cannot be met by reed relays or conventional contact type relays. The high pressure SPDT 1 or 2 Amp contacts operating at 26 VDC enables the unit to switch capacitance or lamp loads with current spikes that would normally weld the contacts of reed relays. The high sensitivity of 125 mW pull-in, long life and insulation resistance of more than 10^{10} ohms make it an ideal unit for galvanic separation between electronic circuits. The AZ-530 THINPAK is available in standard coil voltages from 6 to 115 VDC with an operate and release time of less than 2 ms. It has PC terminals in 0.10" grid spacing. A clear plastic dust cover with a mylar bottom plate is provided.

ELECTRICAL SPECIFICATIONS

Contact Rating — noninductive load
Light Duty (Code 1): Fine silver goldplated
1 Amp @ 26 VDC or
0.5 Amp @ 115-VAC
Medium Duty (Code 2): Silver Cadmium-Oxide goldplated
2 Amp @ 26 VDC or
1 Amp @ 115 VAC

Life Expectancy — Mechanical Operations: 10^7
Operations at Rated Load: 10^6

Contact Resistance — 50 milliohms max. initially

Operate Time — < 5 ms at 2 times must operate voltage or current

Release Time — < 2 ms at 2 times must operate voltage or current

Contact Bounce — at 10 mA contact current:
2 ms max. at operate N. O. side
3 ms max. at release N. C. side

Capacity — typical: NC to Movable 0.6 pF
NO to Movable 0.9 pF
contact to coil 12 pF

Dielectric Strength — 500 Vrms across contact gap and contact to coil

Insulation Resistance — 10,000 Megohms min. @ 20° C, 100 VDC, 50% RH

Drop Out — 10% minimum of must operate voltage or current.

Coil Power — Pick UP typical: light duty contact 125 mW
medium duty contact 250 mW
Max. Continuous Dissipation: 1.6 W @ 20° C (68° F)
1.2W @ 40° C (105° F)
Temperature Rise: approx. 55° C per Watt

Coil Temperature — Max. 105° C (220° F)

Ambient Temperature —
Operating: −55° C (−72° F) to 80° C (175°F) @ nominal operating voltage
Storage: −55° C (−72° F) to 105° C (220°F)

Vibration — 0.062 DA @ 10-55 Hz

Shock — 20 g

Enclosure — Clear plastic cover with mylar bottom plate

Terminals — Printed circuit board terminals goldplated in 0.10" standard grid space

Weight — Approx. 10 gr.

Standard Relays with light duty contact

60	82	4700	8.7	46	AZ 530-04-2
115	145	14500	5	82	AZ 530-03-2

All values at 20° C.
Relays will pull in with less than "must operate" value.
There will be a change of less than 10% in must operate if several relays are mounted close together.
Note: To fasten relay on PC board do not bend contact terminals as this damages adjustment! Use coil terminals only. After soldering relay to board, do not dip the board into a cleaning solution.
Solder temperature: Max. 270° C (500° F)
Solder time: Max. 5 sec.

COMAR
ELECTRIC COMPANY

SERIES CR-1800 AND CR-1900

A.C. or D.C. OPERATION
COMPACT
4PDT SWITCHING
4 AMP CONTACT RATING
ALL CR-1800 SERIES (Underwriters Laboratory Component Program Recognized for same polarity). File No. E-29163.
ALL CR-1900 SERIES (Underwriters Laboratory Component Program Recognized for same and opposite polarity). File No. E-29163.

* Component Recognized by Underwriters' Laboratories as an across the line starter for use in industrial applications and similar devices. Tested in accordance with the requirements of U/L 114 and U/L 508.

The CR Series is an extremely compact relay. It is recognized and approved under the U/L Components Program for switching loads of the same or opposite polarity.

Because of the close proximity of adjacent poles in relays of this size, a breakdown phenomenon can occur when switching loads at opposite polarity. For this reason the CR-1900 Series features a special barrier (Pat. Pending) which prevents such a breakdown and the subsequent destruction of the relay and/or equipment.

SERIES CR-2

LIGHT DUTY RELAY
DC OPERATION
COMPACT 1PDT TO 3PDT SWITCHING
4 AMP CONTACT RATING

The Comar CR-2 is available as a SPDT, DPDT, and 3PDT enclosed relay with either solder lugs or printed circuit tabs. Terminals are molded into Diallyl Phthalate 73-01 to form the Terminal board, dust cover is clear Lexan. The CR-2 is also available in open frame construction.

The CR-2 is available for DC operation only with insulated blades.

Socket available.

SERIES Y

MEDIUM DUTY
3PDT RELAY
7½ AMP CONTACTS
RECOGNIZED UNDER U/L COMPONENTS RECOGNITION PROGRAM FILE NO. E-29163 CSA FILE NO. LR-25151

The Y 3PDT relay by Comar incorporates outstanding construction features not available in other relays of this type. They add up to increased reliability with a consequent cost vs value improvement in the products they are used in.

All terminals are molded in place using diallyl phthalate; this assures precision long lasting contact alignment, and a decrease in carbon tracking. Zytel 101 bobbins are used in the coils for improved dielectric characteristics and increased coil stability at operating temperatures.

SERIES A

MEDIUM DUTY
VOLTAGE SWITCHING
RELAY 10 AMP
CONTACT RATING

The Comar type A is a medium duty, multiple contact, applications. The long blade contact arms assure superior wiping action. When necessary, the A relay can be furnished to meet U/L requirements. The type A can also be supplied with up to 6 form C contacts, voltage switching relay designed for industrial control subject to the contact ampere ratings as shown in the specifications.

SERIES G

LIGHT DUTY
VOLTAGE SWITCHING
RELAY 5 AMP
CONTACT RATING

The Comar type G is a general purpose, multiple contact, voltage switching relay suitable for industrial control applications. In addition to the standard assemblies listed, the type G can be furnished to meet U/L requirements. It is also available with octal plug in base and dust cover, or hermetically sealed.

The Comar G2, DC only, is the long frame version which increases the coil area enabling the relay to be adjusted at 120 MW per pole sensitivity. The G2 is also available for use as a time delay relay with pull in delays of 50 milliseconds and drop out delays up to 100 milliseconds depending on switch combinations and coil power.

SERIES Z1 AND Z2

SENSITIVE DC RELAY
SPDT SWITCHING
3 AMP CONTACT RATING
SOLDER LUG TERMINALS
ALL Z1 & Z2 RELAYS (Underwriters Laboratory component program recognized for same & opposite polarity).
File No. E-29163

* Component recognized by underwriters laboratories as an across the line starter for use in office appliances, business equipment, or similar equipment. Tested in accordance with the requirements of U/L 508 and U/L 114.

The Comar Z1 is a U/L component recognized low cost sensitive relay, open construction, tapped holes in frame, armature common to mounting bracket. It also features a two piece blade and coil spring in tension as opposed to the conventional combination blade spring.

The Z1 features solder terminals, while the Z2 features printed circuit terminals.

The Z may be either voltage or current actuated maximum pick-up sensitivity is 50 MW, standard 200 MW. See standard assemblies.

Comar also manufactures a complete line of telephone type, crystal can and other general purpose relays as well as steppers and solenoids.

BABCOCK RELAYS

ESTERLINE

Unequalled for accurate, dependable performance under widely varying lo environmental conditions, Babcock hermetically sealed relays are ideally su continuous-duty airborne and ground system applications.

All relays in the Babcock line meet or exceed MIL-R-5757D and applicable of related military specifications. For complete assurance of reliable perform critical applications, each relay series undergoes extensive life testing under a s reliability program. First of its type in the relay industry, the Babcock progr nishes failure rate data guaranteeing miss-free operation within the critical par of missile usage.

DESIGN FEATURES

High-Flux Magnetic Design: High sensitivity with minimum coil power • Constant force across gap • High contact pressure.

Contaminant-Free Operation: High-reliability series available with all-welded construction and activated porous glass getters.

Hermetically Sealed Construction: with 90% nitrogen, 10% helium, tested to 10^{-8}cc /sec.

Universal Contacts: Exclusive Babc versal contacts" permit relay operat dry circuit to rated load with the sam set.

Vibration and Shock Immunity: Bala mature and low-inertia components.

BR40, CBR40 RELAYS

TO-5 SIZE TRANSISTOR CAN RELAYS — Dry Circuit to 1 Amp. Military & General Purpose Industrial Types

All-Welded

MILITARY MODEL — **Contact:** 1 amp., DPDT • **Mil Spec:** MIL-R-5757 • **Vibration:** 3 Hz • **Shock:** 80g, 11 ms. • **Temp. Range:** —65°C to +125°C • **Life:** 100,000 operations, amp.; 1,000,000 operations, min. @ low level • **Bounce Time:** 1.5 ms, max. • **Mountin** flange • **Terminal Styles:** plug-in, 1½" printed circuit leads.

INDUSTRIAL MODEL — **Contact:** 1 amp., DPDT • **Vibration:** 10g, 500 Hz • **Shock:** ms • **Temp. Range:** —55°C to +71°C • **Life:** 100,000 operations, min. @ 1 amp.; operations, min. @ low level • **Bounce Time:** 2 ms, max. • **Mounting Types:** flange • **Styles:** plug-in, 1½ printed circuit leads.

Chopper adjustment	Relays are adjusted to follow 60 Hz sinusoidal AC current with approximately equal dwell on the fixed contacts. Available on models BW-2 and BW-3 only.			
Contact resistance				
Typical (milliohms)	25	25	25	25
Maximum (milliohms)	40	40	40	40
Dielectric strength	1000 volts RMS	1000 volts RMS	1000 volts RMS	1000 volts RMS
Insulation Resistance***	10,000 MΩ min.	10,000 MΩ min.	10,000 MΩ min.	10,000 MΩ min.
Coil temperature rise per watt of power dissipation	15°C	20°C	40°C	40°C

*The permanent magnets are adjusted so that the relay will release (open its front contact) when the current through its coil is reduced to less than the 'must release' value.

**The permanent magnets are adjusted to hold the armature in the position to which it was last operated until sufficient current of opposite polarity is applied.

***Special Order

BOURNS INC TRIMPOT® RELAYS

MAGNETIC LATCHING • AC OPERATED • HIGH PERFORMANCE • INDUS

Bourns relays for military, aerospace, ground support and industrial equipment incorporate high reliability and long life for operation in adverse environments. They are available in a variety of size, mounting and performance characteristics and provide consistent, dependable service over wide levels of shock and vibration, and extreme ranges of temperature.

Bourns reliability is a result of stringent quality control, modern, well-equipped laboratory facilities and established testing procedures. These techniques combined with Bourns advanced engineering design produce top-quality relays with outstanding characteristics.

SERIES 3100

TRIMPOT® RELAY, 1.0 AMP., SPDT

ACTUAL SIZE

3100H

Also Available In
3100L — Long Lead
3100J — "J" Hook
.2" x .4" x .6"

FEATURES

- Operating temperature range −65° to +125°C
- Shock — 100G 11 milliseconds
- Vibration — 20G to 2000 Hz
- Pick-up sensitivity — 100 mw nominal @ +25°C

Standard Coil Resistance	VOLTAGE ADJUSTED* Nominal Operating Voltage	Maximum Pull-in Voltage at +25°C	Maximum Pull-in Voltage at +125°C	Drop-out Voltage Minimum
50Ω	4.2	2.2	3.1	0.16
120Ω	6.4	3.4	4.8	0.24
500Ω	13.2	7.0	9.9	0.5
1000Ω	18.8	10.0	14.0	0.7
2000Ω	26.5	14.1	19.8	1.0

SERIES 3102

MAGNETIC LATCHING RELAY, 1.0 AMP., DPDT

ACTUAL SIZE

3102H

Also Available In
3102L — Long Lead
.40" x .40" x .33"

FEATURES

- Latch and reset sensitivity — 160 mw nominal @ +25°C
- Operating temperature range −65° to +125°C
- Vibration — 50G to 3000 Hz
- Shock — 150G 11 milliseconds
- Available in all welded construction

Standard Coil Resistance	VOLTAGE ADJUSTED* Nominal Operating Voltage	Maximum Latch & Reset at +25°C	Maximum Latch & Reset at +125°

MAGNETIC LATCHING RELAY, 2.0 AMP., DPDT

ACTUAL SIZE

3104H

Also Available In
3104L — Long Lead
.43" x .40" x .33"

FEATURES

- Latch and reset sensitivity — 160 mw nominal @ +25°C
- Contact Rating — 2.0 ampere resistive at 28.0 volts DC Case grounded
- Operating temperature range −65° to +125°C
- Vibration 50G to 3000 Hz
- Available with all welded construction

Standard Coil Resistance	VOLTAGE ADJUSTED* Nominal Operating Voltage	Maximum Latch & Reset at +25°C	Maximum Latch & Reset at +125°

MERCURY-WETTED CONTACT RELAYS

Input analog switching, output power conversion switching, solid state input and output buffering.

- Life: 22 x 10^9 operations.
- Low, constant contact resistance.
- No contact bounce.
- Switching speeds as fast as 1 millisecond.
- Versatile contact load capabilities . . . low level to 250 va.
- High power gain . . . up to 5,000 with no noise sensitivity.
- Wide range of sensitivities: 2.0 mw to 550 mw.

MR-2	Normally Closed, SPST
MR-11	2-Pole, Both N.O.
MR-111	3-Pole, All N.O.

Type MR-11

NDA DUTY — 35 AMPS — 120 VAC
ND SA LISTED)

35 mps (per pole) at 120 VAC. Coil operating current: 05 amp; EM-2, .050 amp; EM-11, .120 amp; EM-111, .220 EM- 4¾ x 2⅝ x 2½"; EM-2, 5⅜ x 3⅜ x 2½"; EM-11, 6¼ ⅜ Coils — 120 VAC, 60 Hz. 2 lbs.

Type	Description
EM-1	Single Pole, N.O.
EM-2	Single Pole, N.C.
EM-11	2-Pole, Both N.O.
EM-111	3-Pole, All N.O.

Type EM-11

VY-DTY — 60 AMPS — 120 VAC
ND SA LISTED)

HD-rated 60 amps for 120 V and 35 amps for 230 V, 60 AC. Ty HD-2 2-pole relay; each pole, 60 amps at 115 V, and amps 230 V. Type HD-11 3-pole relay; each pole, 60 amps 120 and 35 amps at 230 V. Coils — 120 VAC, 60 Hz. ⅜ x 5 x3¾"; +2⅜ x 5¾ x 3¾"; § 3⅜ x 6⅝ x 4". 3 lbs.

Type	Description
HD-1	Single Pole, N.O.*
HD-2	Single Pole, N.C.+
HD-11	2-Pole, Both N.O.§
HD-111	3-Pole, All N.O.

Type HD-111

00" LAY — 100 AMPS — 120 VAC (CSA LISTED)

nt-mo ted load and coil terminals. Rated 100 amps at 120 V, or 1 kW resistive load capacity. Coil operating current, 0 am 7 x 3½ x 3⅜". Coils, 120 VAC, 60 Hz. 4 lbs.

Type	Description
100	Single Pole, N.O.

Type "100"

"H-POWER" ENCAPSULATED RELAYS

gh pe rmance relays have hermetically sealed steel shells th ceric lined electrode chamber, epoxy insulation. Similar above elays, but with higher current capacity, maximum reli- ility. pervious to physical or thermal shock, moisture and rt Ty s S and T completely encapsulated. Rated to switch ds up o 550 volts AC. Coils — 120 VAC, 60 Hz.

YPE A — MINIATURE POWER

25 Amps/120 VAC 25 Amps/240 VAC

zes: A, 4¼ x 3 x 2¼"; A-11, 4¼ x 4¼ x 2½". 2 lbs.

Type	Description
A-1	Single Pole, N.O.
A-2	Single Pole, N.C.
A-11	2-Pole, Both N.O.
A-111	3-Pole, All N.O.

Type A-1

Type A-111

YPE B — STANDARD DUTY

50 Amps/120 VAC 35 Amps/240 VAC

zes: B, 4¾ x 3 x 2¼"; B-11, 4¾ x 4¼ x 2½"; B-111, 4¾ x ¼ x 3". 3 lbs.

Type	Description
B-1	Single Pole, N.O.
B-11	2-Pole, Both N.O.
B-111	3-Pole, All N.O.

Type B-111

YPE H — HEAVY DUTY

100 Amps/120 VAC 90 Amps/240 VAC

zes: H-1, 7½ x 4 x 3½"; H-11, 7½ x 6½ x 4". 6 lbs.

Type	Description
H-1	Single Pole, N.O.
H-11	2-Pole, Both N.O.
H-111	3-Pole, All N.O.

Type H-1

OMPLETELY ENCAPSULATED

Type S 25 Amp/120 VAC Type T 50 Amp/120 VAC

oxy ce, sealed; molded terminals. Sizes: S-1, 3½ x 1¾ x 1⅝"; 1. 37 x 2 x 1⅞". 1 lb.

Type	Description
S-1	Single Pole, N.O.
T-1	Single Pole, N.O.

Type S-1

D HIGH-POWER TIME DELAY RELAYS

ngle le, N.O. mercury-to-mercury contacts. Delay circuit resets on ompletion of delay. Load contacts are totally isolated from lay rcuit and are capable of switching loads to 550 VAC. angel −10° to +65°C. Repeatability, ±2%. Hermetically aled Sizes: TD-A, 4 3/16 x 3 x 2¼"; TD-B, 4¾ x 3 x 2¼"; TD-H, ¾ x 3⅝". Delay operates from 120 VAC. *Time range in scon Av. shpg. wt. 2 lbs.

CLARE MILITARY-TYPE (CRYSTAL CAN) RELAYS

Aerospace and ground support equipment, communications, instrumentation, data processing, industrial process cont

- Long electrical and mechanical life, under extreme conditions of temperature, shock, vibration, linear acceleration.
- Sensitivities from 40 mw.
- Wide variety of mounting styles.
- Wide range of relay types in addition to those listed.
- Versatile contact capabilities — low level to 10 amp. Gold-plated contact areas, high contact pressures, positive wiping action.

TYPE TF TRANSISTOR CASE RELAY — MILITARY OR INDUSTRIAL

- Low level to 1 amp. contact rating.
- 2.0 ms max. operate time.
- 80 g ½ sinewave shock, 11 ±1 ms.
- 30 g to 3000 cps vibration.
- Hermetically sealed welded enclosure.
- 100,000 min. operations at 28 vdc lamp. resistive load.
- Temperature ranges:
  Military: −65°C to +125°C
  Industrial: −55°C to +75°C

Type TF Relays combine the advantages of electromechanical performance (immunity to transients, input-ou isolation, positive on-off switching, etc.) with assembly and handling techniques for pcb mounting with transis and other solid state devices. For complete information, call your Clare sales engineer.

FOR MORE DETAILED INFORMATION CONSULT YOUR CLARE SALES OFFICE OR NEAREST DISTRIBUTOR.

CLAREED® SEALED-CONTACT REED RELAYS

Industrial control, data logging and instrumentation, communication switching, ground control and check-out systems.

- Inherent reliability with no maintenance (contacts sealed in glass).
- Switching speeds in low millisecond range.
- Immunity to transient electrical noise.
- Contact load versatility . . . low level to 50 va.
- Life: 20 x 10^6 or 100 x 10^6 at full rated load depending on choice of switches.
- One to twelve contacts.
- Packaging for pcb or wired chassis . . . or as functional pcb assemblies.

CLARE TYPE CRT

CONTACT RATING:
1 amp max., 250 volts max., 5 va max.

PACKAGING:
Coils and contacts have fixed terminals for printed circuit board mounting.

CLARE GENERAL PURPOSE RELAYS

Series GP1 - 4PDT, 3 AMP, AC or DC

- 10 hp, 250 VAC contact rating.
- Opposite polarity design.
- Choice of six contact types: Gold flashed silver button, silver cadmium oxide button, palladium button, gold alloy button, palladium crossbar, gold alloy crossbar.
- Designed for U/L recognition.
- Interchangeable with existing relays.
- Competitively priced.
- Delivery off-the-shelf in 132 models listed — fast delivery on customized variations.

CLARE GENERAL PURPOSE RELAY

The new general purpose relay from Clare, 30-year-leader in relays and related control components.

Typical applications: Appliances, vending machines, business machines, industrial control systems, communications instrumentation, peripheral EDP equipment.

Height: .281"
Width: .109"
Depth: .859"

Voltage (vdc)	PART NUMBERS: Gold Flashed Silver Button Contacts	PART NUMBERS: Silver Cadmium Oxide Button Contacts	Coil Resistance (ohms)	Average Current (ma)
6	GP1R11D0000	GP1R21D0000	40	150
12	GP1R11D1000	GP1R21D1000	160	75
24	GP1R11D2000	GP1R21D2000	650	37
48	GP1R11D3000	GP1R21D3000	2,600	18
90	GP1R11D4000	GP1R21D4000	9,000	10
110	GP1R11D5000	GP1R21D5000	11,000	10

Voltage (vac)	PART NUMBERS: Gold Flashed Silver Button Contacts	PART NUMBERS: Silver Cadmium Oxide Button Contacts	Coil Resistance (ohms)	Average Current (ma)
6	GP1R11A0000	GP1R21A0000	11	200
12	GP1R11A1000	GP1R21A1000	43	100
24	GP1R11A2000	GP1R11A2000	160	52
48	GP1R11A3000	GP1R21A3000	668	25
120	GP1R11A6000	GP1R21A6000	3,900	11

Relays listed above are stock items with same polarity rating and solder lug/plug in terminals. Stock relays with opposite polarity rating may be ordered by changing "R" to "Q". ¾" pcb terminals may be ordered by changing the second digit after the letter "R" from "1" to "2". For taper tabs, change this digit to "3".

TELEPHONE-TYPE RELAYS

Industrial, commercial and military ground systems where cost and life are important considerations.

- Long Life: up to 50 x 10^6 operations.
- Variety of enclosures and contact materials.
- Variety of terminals . . . pcb, direct plug-in, solder, taper tab.
- Highly reliable contacts, with independent twin contact surfaces.
- Stable, adjustment-free operation.
- Consistently reliable performance at low cost.

TYPE J

TERMINALS: Solder tabs — slotted.

MOUNTING: Two #6-32 NC tapped holes in relay heelpiece; mounting hardware included in relay price.

For detail characteristics see Manual 501.

STEPPING SWITCHES

Mass sequential switching — counting, totalizing, scanning, sequence control, circuit monitoring.

- Low cost scanning and counting.
- Maximum switching density.
- Special purpose shorting switches . . . "All But One," "Progressive," "Alternate" operations.
- Long service life and low maintenance.
- Special high voltages are availale.
- Special modifications and functional assemblies handling complex sequential switching operations.

CLARE

For detail characteristics see Manual 601.

CONTACT RATINGS:
Bank and Wiper — Switch 100 ma, 30 vdc resistive . . . Carry 3 amps . . . Interrupter and Off-Normal — 2 amps, 150 watts.

QUICK-MOUNT MODELS AVAILABLE
Fast unit-for-unit replacement — no resoldering — minimum downtime. See Data Sheet 651-3A

‡Break before make not guaranteed.

The Coto Series 1000 Miniature PCB Reed Relays offer the most comprehensive choice of switching parameters with pin terminations on the popular grid pattern of 1" x .015". Included are 21 contract combinations of Form A, B and C dry reeds and 11 combinations of Form A and B in mercury wetted types. The latter offer greatly expanded switching capability, and eliminate all contact bounce. Up to 6 poles per relay and 5 standard coil voltages are optional. In addition, special purpose reed switches, windings and terminal pin options, electrostatic and magnetic shielding may be specified.

Drive coil windings have been carefully optomized to assure fast contact transfer. This is particularly important in relays carrying several reeds, since the first to close shunts out a disproportionate percent of flux unless adequate overdrive is available. Typical pull-in and drop-out is 1 mil/sec. and .5 mil/sec. respectively, including bounce and coil rise and fall time. Hg wetted reeds are somewhat slower, averaging 2 mil/sec. and 1 mil/sec. Operate times are exclusive of any delay introduced by contact protection devices. Reactive or high inrush loads will require contact protection, as with any type relay if maximum reliability and life are to be realized.

For information on contact protection request Technical Bulletin No. CS-1. For engineering assistance address Sales Engineering Dept. and include full details.

THE JR MULTIPOLE ROTARY SWITCH

The JR Switch is manufactured in accordance with MIL-S-21604 (Ships). It features contact ratings of 10A at 125VAC and 5A at 125VDC. Switches can be assembled with any number of sections up to 25 and can contain any combination of rotor types.

VB SERIES VOLTAGE BAND MONITOR/RELAY

(D.C. POLARITY INDICATED)

The VB Series offers protection to equipment which is required to operate between two voltage limits. The solid state monitor determines preselected under or over voltage conditions, and de-energizes an internal 10A DPDT control relay if these limits are exceeded. The monitor is equipped with time delay to accommodate start-up transients.

SPECIFICATIONS

RESPONSE TIME: Pickup: 30m. sec. Drop-out: 0.5 sec.
TEMPERATURE: Operating: 0°C — +55°C
Storage: −45°C — +85°C
RATED OUTPUT: DPDT Relay
10A @ 24VDC or 120VAC — 5A @ 240VAC Resistive
POWER REQUIRED: 3 Watts (Approx.)
ENCLOSURE: Plastic dust cover & sealed enclosure available

UO SERIES — OVER VOLT - UNDER VOLT MONITOR/RELAY

(D.C. POLARITY INDICATED)

The UO Series consists of a solid state voltage detector that senses a voltage greater than a preset "pick-up voltage" and causes an internal DPDT relay to operate. When the voltage drops to a preset "drop-out" voltage the output relay will de-energize. A hysteresis is set into each standard monitor to allow a differential between pickup and dropout. For specifications, see VB Series.

KNOB ADJUSTABLE:

Catalog No.	Drop-out Voltage	Pull-in Voltage	Hyst Volta

UOA- 28-DFA	27VDC	29VDC	2

FOR ORDERING INFORMATION SEE DIAGRA ON VB SERIES.

CM SERIES CURRENT MONITOR/RELAY • CT SERIES CURRENT TRANSFORMER

The CM Series consists of a Solid State, magnetic, current detector which senses a current level. When the monitored current exceeds the trip point setting for a period greater than the response time, an internal 10 amp. DPDT relay will operate. A current decrease of at least 5% of trip point is required for relay to de-energize. The monitors are equipped with appropriate time delays to accommodate start-up transients and short-time line variations.

AC KNOB ADJUSTABLE — CM SERIES:

Catalog No.	Supply Voltage	Trip Point (Amps.)	Price 1 - 9
CMA-120-AKA- 1	120VAC	0.2 - 1.0	$63.00

SL SERIES PHASE SEQUENCE & LOSS MONITOR/RELAY

The SL Series is designed for use in applications where motor rotation or connection to the power line is critical, or where loss of one or more phases may cause damage to electrical equipment. If the phase sequence is correct and full-line voltage is present on all three phases, the internal relay will be energized. If one or more phase is lost or if the phase sequence is reversed, the control relay will de-energize.

B SERIES 3 PHASE VOLTAGE BAND MONITOR/RELAY

outside of these limits. This device provides both under and over voltage monitoring of each phase of a Delta or Y system in one package. The monitors are equipped with a drop out time delay to accommodate start-up transients. With normal operating voltages on all phases, an internal relay will be energized. If the voltage on any phase goes above or below the drop-out limit, the signal to the time delay will be removed. If this out-of-limit condition exists on any phase, for a period longer than the release time of the time delay, the output relay will de-energize.

UPA SERIES: 3-PHASE UNDER VOLTAGE MONITOR for under voltage operation. Each phase is monitored for a pre-selected under voltage condition. When the monitored voltage drops below the drop-out voltage set point the internal DPDT 10 amp relay drops out. When it rises above the pick-up voltage set point the relay picks-up. Available in Delta or Wye in fixed or knob adjustable voltages.

SPECIFICATIONS

RESPONSE TIME: Pickup: 30m. sec. Drop-out: 0.5 sec.
TEMPERATURE: Operating: 0°C — +55°C
Storage: −45°C — +85°C
RATED OUTPUT: DPDT Relay
10A @ VDC or 120VAC — 5A @ 240VAC Resistive
POWER REQUIRED: 3 Watts (Approx.)

The PBA series offers protection to three phase equipment which is required to operate between two voltage limits. The three phases are monitored for a pre-selected under or over limit. An internal control relay is de-energized when the voltage goes

VBC SERIES VOLTAGE BAND CONTROL RELAY

The Voltage Band Control Relay is designed for applications where it is required that the voltage be maintained between two specified voltage limits. It is used in applications of differential control, voltage unbalance sensing, servomechanism control, process control, and where voltage regulation is required.

The Voltage Band Control Relay is available in two models: fixed and knob adpustable. The fixed unit has the limits set at the factory. The knob adjustable unit allows the limits to be set according to requirements.

Catalog No.	Nom. Voltage	Low-Limit Drop-out	High-Limit Drop-out	Hyst. Voltage

VBC-240-AKA	240VAC	220 - 240	240 - 260	2VAC

Solid state voltage sensors determine preselected low or high voltage condition and control a center-off or neutral relay. Under normal voltage, the relay remains de-energized in a center-off or neutral position. The control relay energizes and the relay contacts transfer to one side or the other when a high or low voltage limit is exceeded.

SPECIFICATIONS

RESPONSE TIME: 25m. sec. (typical)
TEMPERATURE: Operating: 0°C — +55°C
Storage: −45°C — +85°C
RATED OUTPUT: Relay*
5 Amp @ 120VAC Resistive
2 Amp @ 240VAC Resistive
POWER REQUIREMENT: 3 Watts (Approx.)

* An internal lockout circuit prevents the low voltage relay or the high voltage relay from being energized at the same time.

Special voltage limits and fixed control available from factory. Specify nominal voltage, limits and hysteresis.

RELAYS·SOLENOIDS·TIMERS

Manufactured by DELTROL CONTROLS

RELAYS

SERIES 25

Miniature cradle-type relay with snap-on dust cover. Contacts: gold bonded fine silver, standard; other material available on request. Terminals: gold plated, pierced solter type. Mounting: four No. 3-48 holes on .375" x .375" centers.

SERIES 100

Low cost, general purpose relay designed for light power loads and continuous duty operation. Armature stop maintains adjusted characteristics throughout life of relay. 5 amp contacts: 1/8" silver, gold flashed. 10 amp contacts: 3/16" silver cadmium oxide, gold flashed. Mounting: 6-32 mounting stud and locator tab. Available to 3PDT.

SERIES 100ML

Low cost, multi-pole (up to 6PDT) general purpose magnetic latching relay with long life (minimum of 10,000,000 mechanical operations). Positive snap-action, one-piece armature eliminates interconnections. 5 amp contacts: 1/8" dia. silver, gold flashed. 10 amp contacts: 3/16" dia. silver cadmium oxide, gold flashed. Standard solder or 3/16" quick-connect terminals. Dust cover available. Recognized under the Components Program of Underwriters Laboratories, Inc.

100UP/101UP

Printed circuit, mounted relay for light power load applications. Has phenolic insulating barriers. Continuous duty operation. Provided with armature stop to maintain adjusted characteristics. 5 amp contacts: 1/8" dia. silver, gold flashed. 10 amp contacts: 3/16" silver cadmium oxide, gold flashed. Recognized under the Components Program of Underwriters Laboratories, Inc. Available to 3PDT.

SERIES 105

General purpose plug-in relay for light power loads. Continuous duty operation. Blue transparent butyrate dust cover. Standard 8-pin octal-type plug for SPDT and DPDT units, 11-pin for 3PDT units. 5 amp contacts: 1/8" dia. silver, gold flashed. 10 amp contacts: 3/16" dia. silver cadmium oxide, gold flashed. Available with B3 hold-down spring. Available to 3PDT.

SERIES 105ML

General purpose magnetic latching plug-in relay. Positive snap-action, one-piece armature eliminates interconnections. Minimum mechanical life: 10,000,000 operations. Up to 5PDT. 10 amp contacts: 3/16" dia. silver cadmium oxide, gold flashed. Standard 8-pin octal-type plug for 5PDT, 11-pin for DPDT, 20-pin for 3PDT, 4PDT & 5PDT.

SERIES 106/107

Enclosed, plug-in version of 100 Series general purpose relay. Use for light power loads and continuous duty operation. Armature stop maintains adjusted characteristics. 5 amp contacts: 1/8" dia. silver, gold flashed. 10 amp contacts: 3/16" dia. silver cadmium oxide, gold flashed. Dust cover: clear, high-impact plastic. Recognized under the Components Program of Underwriters Laboratories, Inc.

SERIES 120

Rugged, small-size, medium duty power relay for industrial controls applications. Continuous duty operation. 15/20 amp contacts: 1/4" dia. silver cadmium oxide, gold flashed. Mounting: No. 6-32 stud and locating tab. Terminals: .250 quick-connect with solder hole.

SERIES 140ML

15 amp general purpose magnetic latching relay. Positive snap-action, one-piece armature eliminates interconnections. 15 amp contacts: silver cadmium oxide, gold flashed. Continuous or intermittent duty. Up to 6PDT. Terminals: .187 quick-connect with solder holes. Dust cover available.

New!

SERIES 140

General purpose medium duty relay. Continuous duty operation. Armature stop. 15 amp contacts: 1/4" dia. silver cadmium oxide, gold flashed. Mounting: No. 6-32 mounting stud and locator tab. Terminals: .187 quick connect with solder holes. Available to 3PDT.

New!

SERIES 145

Plug-in version of 140 Series general purpose medium duty relay. Molded Lexan dust cover.

New!

SERIES 150

1200W tungsten lamp DPD especially suited for high loads. Booster springs on able contact arms. Cont duty operation. 20 amp co 5/16" dia. silver cadmium gold flashed. Mounting 6-32 stud and locator tab minals:, solder and .187 connect with solder holes.

New!

SERIES 155

Plug-in version of 150 1200W tungsten lamp ref Standard 8-pin octal plug. ed Lexan dust cover.

New!

SERIES 160

Low cost, reliable general pose relay for industrial co Available to 3PDT. Molded coil. Blade-type termina higher current-carrying ca Continuous duty operatio 5 amp contacts: 1/8" dia. gold flashed. 10 amp con 3/16" dia. silver cadmium gold flashed. Mounting: 6-32 stud and locator tab. minals: .187 quick-connec solder holes. 10 amp tab mounting socket available.

New!

SERIES 165

Plug-in version of 160 relay. Molded Lexan dust reduces dust and contact taminants. 10 amp nylon m ing socket available with quick-connect, solder, or p circuit terminals.

SERIES 900

Heavy duty power relay fo acting industrial control ap tions. Particularly suite motor controls, heater and other power switching cations. Long life, rugged struction. 25 amp con 5/16" dia. silver cadmium gold flashed. Heavy duty type terminals. Mounting: 3/16" holes on 1-7/8" ce Recognized under the Co nents Program of Underw Laboratories, Inc.

SERIES 900-1C

900 Series heavy duty relay with snap-action, 10 1/3 hp, SPDT auxiliary sw Recognized under the Co nents Program of Underw Laboratories, Inc.

SOLENOIDS

TYPE C-8

Low cost, low and medium power solenoids designed especially for volume applications where low cost is essential.

TYPE D-17

Designed for low and medium power applications. Constructed to provide maximum useful life and efficiency.

TYPE PS-65

This high power solenoid has coils having two windings: a high-surge current pull-in winding that starts the solenoid plunger in motion, and a low-drain winding for holding the plunger in a seated position. The windings are switched automatically by the motion of the plunger.

New!

TYPE C9R

EXCLUSIVE REINFORCED FRAME remains rigid under intermittent high-impact plunger loads. Longer solenoid life with less metal fatigue. Medium power. Intermittent duty cycle. Push or pull types. Mounting: No. 10-32 tapped holes. Solder terminals or leads available.

TIMERS

MODEL 110

PUSHBUTTON

This pushbutton timer starts by manually depressing push button. Pushing button closes timer switch contacts 1-3, energizing timer load and timer motor. Upon completion of fixed time interval, contacts 1-3 open, shutting off timer load and timer motor.

MODEL 159-D

INTERVAL TIMER W/BUZZER

This interval timer switches contacts 1-4 to and contacts 1-3 to ON at the beginnin each preset timed interval. At the end of preset timed interval, contacts 1-3 switc OFF and contacts 1-4 switch to ON. Near of each preset timed interval, buzzer will so for a short period, then shut off.

MODEL 116-D1

INTERVAL TIMER

This interval timer switches contacts 1-4 OFF and contacts 1-3 ON at the beginning of each preset timer interval. At the end of the preset timed interval, contacts 1-4 switch to ON and contacts 1-3 switch to OFF.

MODEL 135-D1

REPEAT CYCLE

This repeat cycle timer switches contacts OFF and 1-3 ON for a fixed time durat during each timing cycle. Timer will contin to repeat the preselected time cycle as long power is applied.

SERIES 60 SPDT
Remote Coaxial Relay

FEATURES — The Series 60 are remote operation, ruggedly constructed, SPDT coaxial relays designed for operation from low-level to 1 KW. They are offered with or without 2 Form C auxiliary contacts. For transmitter-receive applications they are available with a special high isolation "G" connector at the NC or receive position. This "G" connector increases the isolation to greater than —100 db at frequencies up to 500 MHz, although it reduces the power rating through this connector to 20 watts. "G" connectors will increase the listed VSWR above 400 MHz.

Typical electrical characteristics are shown below when used in a 50 ohm transmission line. UHF connectors and solder terminals are not recommended above 400 MHz.

SPECIFICATIONS
Operating Time . . . . . 25 ms
Auxiliary Contact Rating . . . . . 5 amps 115 Vac

MECHANICAL DATA
Life expectancy . . . . . 1,000,000 cycles
Weight . . . . . 12 oz. approx.
Finish
RF Contacts . . . . . Gold Plate
Auxiliary Contacts . . . . . Gold Plate

ENVIRONMENTAL DATA
(Per MIL-S-3928B)
Temperature . . . . . —55°C to +85°C

MODIFICATIONS
Available on special order:
1. Moisture sealing of all entrances to RF portions. (Call for a special number)
2. Microswitch type auxiliary contacts.

ORDERING INFORMATION
After selecting connector type from the Connector & P/N Table, replace XX shown in the Part Number column with the two digits of the selected coil voltage, shown in the Part No. Digits column of the Coil Characteristics Table.

EXAMPLE: *60-260442 is the SPDT relay with UHF connectors for 115V AC operation with 2C auxiliary contacts.*

SERIES 61 SPDT
Remote Coaxial Relay

FEATURES — The series 61 are small SPDT switches for military and severe environmental applic designed to withstand the applicable requirements of specification MIL-S-3928B. The balanced armatur prevents contact chatter under high frequency vibration and severe shock. They are offered with man connectors and 1 or 2 Form C microswitch auxiliary contacts. Gold finished contacts provide reliable o low levels.

SPECIFICATIONS
Operating Time . . . . . 15 ms. max.
Auxiliary Contact Rating . . . . . 5 amps. 115 Vac

MECHANICAL DATA
Life Expectancy . . . . . 10^6 cycles
Weight . . . . . .3½ — 4½ oz.
Finish
RF Surfaces . . . . . Silver Plate
Magnetic Parts . . . . . Nickel

ENVIRONMENTAL DATA
(Per MIL-S-3928B)
Temperature . . . . . -55°C + 125°C
Salt Spray . . . . . 48 Hrs
Humidity . . . . . 10 days
Vibration (Test condition A) . . . . 10 g's to 2000 Hz
Shock . . . . . 15 g's

MODIFICATIONS
Available on special order:
Combinations of connectors.
Mounting holes on opposite side of block.
add suffix R to part number for this modification.
Attached small cables.

ORDERING INFORMATION
After selecting connector type from the Connector & P/N Table, replace XX shown in the Part Number column with the two digits of the selected coil voltage, shown in the Part No. Digits column of the Coil Characteristics Table.

EXAMPLE: *61-240312 is SPDT switch with TNC connectors, 48 DC Coil and 1 Form C microswitch.*

SERIES 77 SPDT
Remote Coaxial Relay

FEATURES — The Series 77 are medium size, light weight, low priced coaxial relays for industrial and less critical military applications. The "T" shaped connector configuration has the common connector at one end and the NO and NC connectors 180° apart at the other end. They are available with or without 1 Form C auxiliary contacts.

SPECIFICATIONS

Operating Time . . . . . 15 ms. max.

26	115 VAC	90-130	Diode Rect.

SERIES 260/260B DPDT
Remote Coaxial Relay

FEATURES — These are remote operation, ruggedly constructed, coaxial relays designed for operation from low level to 1 KW. There are two basic types: The 260 is a standard DPDT switch with 6 connectors. The 260B is a similar item, except there is an internal connection between the NC contacts, leaving only 4 connectors. The latter type is widely used for inserting a circuit element, such as a power amplifier, between two normally connected elements, such as an exciter and antenna.

Both types are offered with a wide variety of connectors and coil voltages and with or without auxiliary contacts.

SPECIFICATIONS

Operating Time . . . . . 25 ms
Auxiliary Contact Rating . . . . . 5 amps 115 Vac

MECHANICAL DATA

Life expectancy . . . . . 1,000,000 cycles
Weight . . . . . 12 oz. approx.

Finish
RF Contacts . . . . . Gold Plate
Auxiliary Contacts . . . . . Gold Plate

ENVIRONMENTAL DATA
(Per MIL-S-3928B)

Temperature . . . . . —55°C to +85°C

MODIFICATIONS

Available on special order:
1. "G" type high isolation connectors on NO or NC.
2. NC connectors on the 260B in place of the standard NO.
3. Microswitch type auxiliary contacts.

260 SCHEMATIC

260B SCHEMATIC

ORDERING INFORMATION

After selecting connector type from the Connector & P/N Table, replace XX shown in the Part Number column with the two digits of the selected coil voltage, shown in the Part No. Digits column of the Coil Characteristics Table.

EXAMPLE: *260B-260442 is the 260B with UHF connectors, 115 AC Coil and 2 Form C auxiliary contacts.*

SERIES 310 SPDT
Vacuum Coaxial Relay

FEATURES – Series 310 Relays have high power handling capability in a small package, with contin rating of 3000 watts at frequencies up to 30 MHz. At 400 MHz, the relay will carry 1000 wat vacuum-enclosed contacts minimize losses and noise.

SPECIFICATIONS
Operating Time . . . . . 6 ms max.

ELECTRICAL DATA
Peak Voltage
At 30 MHz . . . . . 1500 V
At 400 MHz . . . . . 1000 V
Peak Current – 1 μ Sec Pulse
At 30 MHz . . . . . 40 amps
At 400 MHz . . . . . 10 amps

MECHANICAL DATA
Weight . . . . . 8 oz
Life expectancy . . . . . 10^6 cycles
Finish
Connectors . . . . . Silver plate
Block . . . . . Silver plate

ENVIRONMENTAL DATA
(Per MIL-S-3928)
Shock . . . . . 50 g's -11 ms
Vibration (Test condition A) . . . . 10 g's to 2000 Hz
Temperature . . . . . -55°C to +85°C
Salt Spray . . . . . 48 Hrs
Humidity . . . . . 10 days

ORDERING INFORMATION
After selecting connector type from the Connector & P/N Table, replace XX shown in the Part Number column with the two digits of the selected coil voltage, shown in the Part No. Digits column of the Coil Characteristics Table.

EXAMPLE: *310-2302 is SPDT Relay with BNC connectors and 26 VDC Coil.*

CONNECTORS AND PART NUMBERS

Connector Type	Part Num
N	310-XX
BNC*	310-XX
TNC*	310-XX
C	310-XX
SC	310-XX
HN	310-XX

*Reduced power limits when using these connectors.

ELECTRICAL CHARACTERISTICS

Freq. MHz	VSWR	Isolation Loss	Insertion Loss

24	48 VDC	38-54	
25	110 VDC	90-125	
26	115 VAC	90-130	

**Divide resistance by 2 on parallel coil u*
***Requires external diode bridge.*

SERIES 311 DPDT
High Power Vacuum Coaxial Relay

FEATURES – Series 311 Vacuum Coaxial Relays are capable of handling 3 KW of RF power at 30 MHz at 400 MHz. The use of vacuum-enclosed contacts provides reliable, low contact resistance operatio applications of the Series 311 Relays include switching RF power and radar pulse-forming networks.

SPECIFICATIONS
Operating Time . . . . . 6 ms. max.

ELECTRICAL DATA

SERIES 312

Vacuum Coaxial By-Pass Relay

FEATURES — Series 312 Vacuum Coaxial Relays are intended for use in circuits where it is desired to by-pass an RF power amplifier and connect the driving source directly to the amplifier's load. The use of vacuum-enclosed contacts provides reliability and repeatable low contact resistance. Mixture of connectors available on special order.

SPECIFICATIONS

Operating Time . . . . . 6 ms max.

SERIES 313 DPDT

Transfer/Crossover Coaxial Vacuum Relay

FEATURES — The Series 313 are remote operation ruggedly constructed Transfer Relays designed for high power—high voltage operation. The Series 313 also features Kilovac vacuum-enclosed contacts for high reliability, low contact resistance and long life. It is intended for interchanging two transmitters between an antenna and a dummy load, reversing feed phase for directional antennas, and similar applications. It is capable of handling 3 KW at 30 MHz.

GENISCO-ELDEMA SOLID STATE RELAY

A COMPLETE LINE

The Eldema Division offers a complete line of SOLID S TE RELAYS . . . isolated AC relays at any voltage through 10 VAC, up to 40 amperes, SPST and DPST, including models th zero-axis switching for radio interference free operation.

DC models available include 5 through 40 volt models th isolated input.

RELIABILITY

SOLID STATE RELAYS are being used wherever repeated reliable operation is required or wherever maintena e and repair costs for electromechanical relays are high. Through elimination of all moving parts and replacen t of contacts by a switch locked in a crystal structure, full load switching of at least 100 million cycles ma e reasonably expected when the relay is operated within its ratings.

CONSTRUCTION

100 & 200 SERIES RELAYS are fully encapsulated for resistance to severe environments. Contact and coil conn - tions are made through convenient barrier-strip type screw terminals. Mounting is through a countersunk ce r hole requiring only one mounting screw. An aluminum heat sink molded to the base dissipates internal heat. s external dimensions permit mounting on commercially available heat sinks for efficient heat distribution. Te - erature derating curves are provided below.

CONTACT & COILS

SOLID STATE RELAYS (SSR) use the mechanical relay terminology of "coil" and "contact" for convenience. SS s contain no electromechanical elements or moving parts of any type and the "relay" function is achieved tota y through the use of solid state circuitry. Semiconductor contacts have very high "off" resistance and a volt e drop less than one volt in the "on" condition (equivalent to an internal resistance less than 0.1 ohm at ra d voltage and current).

GENISCO-ELDEMA SOLID STATE RELAY

SERIES 100 AC RELAY

- 8 AMP RATINGS
- OPERATE AT VOLTAGES UP TO 240 VAC
- SPST OR DPST CONSTRUCTION
- 50/60 Hz or 400 Hz

SERIES 105 AC SYNCHROSWITCH RELAY

- 8, 15 AND 40 AMP RATINGS
- SYNCHRONUS LINE SWITCHING TO ELIMINATE RFI

SERIES 200 DC RELAY

- 5 AMP RATING—SPST
- 5 THROUGH 40 VDC OPERATION

ALL ELDEMA SOLID STATE RELAYS FEATURE:

- 100 MILLION OPERATIONS
- RUGGED FULLY ENCAPSULATED CONSTRUCTION
- CONVENIENT BARRIER-STRIP SCREW-TYPE TERMINALS
- MOUNT ON HIGH EFFICIENCY WAKEFIELD HEAT SINKS

APPLICATIONS

ELDEMA SOLID STATE RELAYS interface directly with integrated circuits and provide isolated power to solenoids, motors, heaters, lamps and other resistive, inductive or capacitive loads under repeated cycling conditions.

SERIES 105 "SYNCHROSWITCH" relays are recommended where contact bounce is a problem or where radio interference free operation is required.

SERIES 200DC RELAYS drive resistive, inductive or capacitive loads from low level logic sources.

OTHER APPLICATIONS INCLUDE:

- MOTOR AND SOLENOID
- LOAD BANKS AND HEATERS
- MACHINE TOOL CONTROL
- COMPUTER – LOAD INTERFACE
- LAMP DRIVERS
- TRAFFIC SIGNAL CONTROL

ORDERING INFORMATION

Formulate the part number using the table at right.

EXAMPLE:
100-240A08-1S1

The above part number breaks down as follows: Series 100 relay that operates at 240 VAC, with a coil that has 5VDC isolated contacts and will switch a load of 8 amps. Further it is designed for 50/60 Hz operation, SPST construction, and mounted on a Wakefield NC403 Heat Sink.

Part marking includes Eldema Division Genisco Technology Corporation complete part number, max. VRI, coil and contact identification.

ELDEMA FEDERAL VENDOR CODE NUMBER IS 03797

SOLID STATE RELAY PART NUMBERING SYSTEM

SPECIAL ADDITIONS

Symbol	Description
M	**MAGNETIC SHIELDING** (Encapsulated Inside Package) Recommended in high density packaging to reduce relay inter action or in high magnetic field environments.
E	**ELECTROSTATIC SHIELDING** Recommended in high impedance, low level application where low level noise pick-up is undesirable.
S	**SILICONE TREATMENT** Used to improve insulation resistance under severe environment conditions.

Part Number (Example) 12 3A X4 ME

Voltage — Contacts — Package — Special Additions (when required)

SPECIALS

Electronic Applications Company has complete facilities to manufacture special requirements or replacement of existing reed relays at competitive prices — **Consult Factory.**

— ALSO AVAILABLE —

- Mini-Micro
- Compact
- Mercury Contacts
- High Voltage Contacts
- Flat Pack
- Standard
- Axial Leads
- High Current Contacts

*All characteristics are nominal and subject to normal manufacturing tolerances, other voltages available on special order.
**115 VAC units are made with a full wave bridge rectifier and use the same coils as listed under 110 VDC units.
***Four-wafer relays with all "A" form contacts use three-wafer relay coils.
NOTE 1: ONE WAFER RELAYS USE A SHORTER ACTUATOR ASS'Y. — INSTEAD OF 2-1/32 AS SHOWN, THE ACTUATOR IS 1-15/32 HIGH.

Ganged T-Bar Switches

Toggles may be ganged for controlling additional circuits . . . 48, 72, 108, etc. Shown here, 108 poles.

T-BAR Connectors save time and reduce installation costs using individual snap-in crimp terminals crimped to pre-stripped wire and then snapped into a contact block, which forms the connector. The connector is pushed onto the wafer terminals, eliminating soldering. Because we offer a connector, rather than a receptacle, harness work can be completed outside the chassis and therefore no fancy chassis work is required to accept a receptacle. It not only makes the metal work simpler, but it also saves layout engineering and drafting time. Since T-Bar Switch/Relays are so easily mounted, they are often found on the back of meter panels or on their own brackets.

6 P/N88601 Shown
Can be used with all units shown above

8601-51 Crimping Tool

PHYSICAL PROPERTIES:
Wire Accommodated: (1) #18, #20, #22, #24, #26, STD (2) #22, #24, #26 STR
Connector Material: Nylon Zytel or Lexan®
Snap-in Contact Material: Phosphor Bronze
Snap-in Contact Finish: Tin Plated (other on request)
Retaining Clip Material: Stainless Steel
Connector Weight: Approximately 0.3 oz.

GENERAL FEATURES:

The series 801 T-Bar Relays are solen actuated multi-pole relays with a uni design permitting stack-up of enclo contact "wafers." Each wafer ha maximum of 12 pole double throw tacts thereby allowing ECI to supply 801 relay with any combination fro to 60 poles.

CONTACT RATING:
3 amp, resistive load 150 watt maximum make or break;
5 amp, 500 watt maximum carry.

CONTACT MATERIAL:
Gold bonded, fine silver. standard. Oth available on special order.

CONTACT FORMS:
"A" single throw N.O.
"B" single throw N.C.
"C" double throw, break before make
"D" double throw, make before break

NUMBER OF POLES (RELAYS):
One Wafer — 12 poles
Two Wafers — 24 poles
Three Wafers — 36 poles
Four Wafers — 48 poles
Five Wafers — 60 poles ("A" form only)

OPERATE VOLTAGE:
Min. voltage: 80% of nominal at 25°C

RELEASE VOLTAGE:
Max. voltage: 20% of nominal at 25°C

OPERATE TIME:
One Wafer Relay — 15 ms. max.
Two Wafer Relay — 25 ms. max.
Three Wafer Relay — 30 ms. max.
Four Wafer Relay — 35 ms. max.
Five Wafer Relay — 40 ms. max.

RELEASE TIME:
5 ms. max. (36 pole) — 10 ms. max. (12 pole)

TERMINALS:
Solder tab that also mates with T-Bar connector P/N 88601 (two required per wafer)

ENCLOSURE:
Contacts enclosed in dust tight plastic enclosure that is separated from the actuator assembly. Withstands Mil. S — 202 method 106B moisture resistance test.

LIFE:
Mechanical — 20,000,000 operations minimum for relay
Electrical — 20,000,000 operations minimum at 100 milliamps to 100,000 minimum at 5 amps, 150 watts resistive load.

DIELECTRIC:
1000 vrms terminals to case at sea leve and 25°C
1000 vrms terminal to terminal at sea level and 25°C
1000 vrms coil to case at sea level and 25°C

TEMPERATURE RANGE:
—55°C to +85°C

INSULATION RESISTANCE:
5,000 megohms @ 25°C minimum

ORDERING INFORMATION:
Specify Series No. — number of poles contact form letter-coil voltage. For example a 36 pole double throw relay with a 24 VDC coil is: 801-36C-24

MANUFACTURED BY:

electronic controls, inc.
T-Bar Switch/Relay Div. •
Danbury Road, Wilton, Conn. • (203) 762-8351

Manufactured under 1 or more of the following patents: 3,206,990, 3,226,508

® "T-Bar" — Reg. T.M.

WINCHESTER TINY REED RELAYS

ELECTRONIC INSTRUMENT & SPECIALTY CORP.

Y SHIELDED RELAYS! Micro-sized relays specifically designed nitra gh speed switching systems and requiring minimum l powe Extremely small in physical size for high density cuit ackaging.

e to rface solid state circuits, to trigger controlled recti- rs, an in computer and telemetry applications. Provides arly co plete circuit isolation—insulation resistance greater than 10^{12} ohms. Metallic case provides shielding and protection. Reed switch contacts are hermetically sealed in glass with an inert atmosphere. Leads can be freely bent without affecting performance.

Highly reliable operation is assured by careful manufacturing control.

Choice f switches and coil resistance can optimize fast switching, low RF loss to 100 Hz, or low thermal EMF.

ENERAL INFORMATION

PERATE TIME: In order of .3 to .8 milliseconds

ELEASE TIME: .1 to .2 millisecond.

NSULATION RESISTANCE: Greater than 1 x 10^{12} ohms except Form C (1 x 10^{9}).

IFE: 00 million operations at low level, 5 million at max. load rating.

MBIENT TEMPERATURE: −55°C. to +85°C.

HOCK: To 1500 G's. **VIBRATION:** (energized); 35 G from 50 to 2000 Hz.

EIGHT: 1.1 to 2.2 grams.

hipped Promptly from Stock. TERMS 1%-10 days/net 30 F.O.B. Winchester, Mass.

* Magnet coils designed for continuous duty. Do not operate at rate higher than indicated under Mechanical Life.
** Based on steady state test under laboratory environmental conditions. Consult factory if application involves unusual load, speed of operation, off-on environmental or operating conditions. Electric life substantially greater when operated below rated load.
† Load tests — making inrush ratings (0.4 to 0.5 P.F.) — breaking 125% continuous rating (0.65 to 0.8 P.F.). • Cross-bar contacts.

A.C.-D.C. GENERAL PURPOSE RELAYS

TYPE 93

Solder Terminals (Fig. 1a)

Printed Circuit (Fig. 1b)

Solder terminal type has combined front, single hole and stud mounting, screw and stud included. All te out front. One piece molded bobbin and terminal boa struction. Highly resistant to arc tracking. Printed type may be controlled by SCR if firing angle, is n than 10 degrees.*

Size: 1 15/16" x 1 5/16" x 1 5/16" U.L. and

TYPE 93P

8 Pin Plug-In (Fig. 2)

11 Pin Plug-In (Fig. 2)

8 pin octal base for single and two pole. 11 pin base for three pole. High impact case. Standard pin connections.

Size: 2 1/8" x 1 7/16" x 1 9/16". U.L. and C.S.A.

TYPE 93Q

Quick Connect (Fig. 3)

Relay Receptacle 93-153-1

Enclosed quick connect type designed for front moun polarized socket mounting. For socket mounting use 93 socket kit. Front mounting relay has .20 x .187 ter High impact case. Size: 2 1/8" x 1 7/16" x 1 9/16". U.L. and

Mounting Arrangements — All Relays come with plain, side bracket, side studs and flanges. All military relays meet or exceed the requirements of MIL-R-5757. **Vibration** — up to 30 G's and 3000 CPS. **Life** — 100,000 minimum up to 5,000,000 on some series at dry circuit. **Coil Resistance** — 10 to 12,000 DC OHMS at +25°C. Additional information is available in ES switching components catalog.

ELECTRONIC SPECIALTY CO./ELECTRONICS DIVISION—PORTLAND

Until now, designing with mercury relays meant taking the good with the bad. The trade-off for long life, high-speed closure and no contact bounce has been a bulky package (about ¾ cu. in.) that must be babied in a vertical position.

But not any more! Now Logcell® Mercury Film Relays offer all the advantages of mercury-wetted relays . . . plus miniature size (0.06 cu. in.), operation in **any** mounting position, and shock and vibration resistance suitable for many airborne, marine and other mobile applications.

Whether you require the specific advantages of mercury relays for computer logic circuits, advanced instrumentation or high-speed control systems . . . or just need a tiny rugged relay that will last and last and last, consider Logcells:

- Long life — units tested to billions of cycles
- No contact bounce
- Operation in any mounting plane
- Form "C" SPDT contacts
- Fast operating time — 2 ms
- No measurable AC contact noise
- Thermal noise less than 1.0 microvolt
- Switches dry circuits to 1 amp at 0-6 volts
- Inherent contact memory — requires no hol g current (mono-stable models also available)

For complete information about revolutionar ne Logcell Mercury Film Relays — and Logcell M cur Film Switches — write Fifth Dimension Inc., Bo 18 Princeton, New Jersey 08540 or call (609) 924-99

RWB SPECS **Also ask about our red, white and blue ec fications which match Logcell perfor nc and cost to your application.**

5-D FIFTH DIMENSION IC

here at last . . .

a miniature mercury relay that operates IN ANY POSITION

SOLID STATE RELAYS

FOR GENERAL PURPOSE AC or DC LOADS

THE STATIC RELAY

The Static Relay is an isolated all-silicon device which performs the switching functions of a conventional relay, but at a substantial increase in speed, reliability and unlimited life. Because of over 50 megohms load-to-control isolation and 50 microsecond actuating and release time, the static relay is ideal for use in a variety of switching applications.

- FAST - 50 Microseconds actuating & release time - Up to 2000 operations per second.
- VERSATILE - Over 50 Megohm Load-to-control & Pole-to-Pole isolation - Can be driven directly from IC's.
- DEPENDABLE - No moving parts - Unlimited Life - Nothing to wear out.
- QUIET - No Bounce - No Arc - No Noise.
- STRONG - Will withstand the most severe shock and vibration.
- SAFE - Will operate in explosive & corrosive atmospheres.
- FLEXIBLE - Controls Resistive, Inductive, Capacitive or Reactive Loads.

SPECIFICATIONS:

Load Voltage (min-max): DC STATIC RELAY: 0 to 60 VDC
AC STATIC RELAY: 0 to 300 VP, 1 to 500 HZ

Load Types: Resistive
Inductive: Max. Transient 1000VP for 10 ms.
Capacitive: Max. Inrush 3.5 times max. Load Current Rating for 1 second
Reactive: Power Factor ≥ .5 Leading or Lagging

Control Voltage: 5 VDC (Other Voltages available at no change in price)

Control Response: On above 3.75V; Off below 2.00V

Actuating Time: 50 microseconds

Release Time: DC Static Relay: 50 microseconds
AC Static Relay: 1/2 cycle at Load Frequency

Operating Temperature Range: —20°C to +71°C

Open Contact Resistance: 50 Megohms

Construction: Potted Module in a Diallyl Phthalate case.

Mounting: Gold Plated Pins for either Direct Solder-in PCB Mounting or Wire Wrap.

Shock/Vibration, Altitude, Humidity: Per Mil-E-5400

FOR COMMUNICATIONS

FEATURES

- **Unlimited Life - COMPLETELY Solid State**
- **Can be mounted in any position**
- **Insensitive to shock & vibration**
- **Distortion Free**
- **Completely Isolated - Can be controlled directly from IC's**
- **Designed to meet MIL-R-2777A**
- **Compatible with MIL-STD-188**

SPECIFICATIONS

Load Voltage (min-max): + and —0 to 130 VDC
Load Current (min-max): 0 to 200 ma POLAR (see chart)
Load Types: Resitive or Inductive
Control Voltage: +4 to 12 VDC
Bias Voltage: +10 to 12 VDC at 40 ma (when req'd.)
Load-Control Isolation: 50 Megohms min.
Operation Rate: 0 to 2400 operations per second (4800 Baud)
Temperature Range: —40°C to +71°C
Closed "Contact" Drop: less than 1V
Open Contact" Resistance: 50 Megohms min.
Mounting: 8 Pin Octal (Other styles available)
Transient Suppression: Al spikes over + and —150 VDC
Shock Vibration, Salt Spray, Humidity & Altitude: per MIL-R-27777A

APPLICATIONS:

- **TELEGRAPH AND TELETYPE CIRCUITS**
- **DATA ACQUISITION**
- **MACHINE CONTROLS**
- **DIFFERENTIAL CIRCUITS**
- **ALARM CIRCUITS**

FOR TIMING

The Time Delay Module may be used by itself as a SPST normally open or normally closed switch, dependent upon whether it is specified as delay on open or delay on close.

The output circuit of the Time Delay Module provides a solid state "contact" closure capable of switching from 3.5 VDC to 18 VDC at 150 ma. This will enable the user to select a wide range of devices, including the static relay, which will work in conjunction with the Time Delay Module.

SPECIFICATIONS:

Bias: 10 - 12 VDC at 30 ma
Input (Delay Command) Signal Impedance: 10 K ohms.
Delay Period Repeatability: —2% of V or R level.
Response Time to changing delay command: 10 Milliseconds
Delay Accuracy (real-time): ±2% resolution
Delay period starts when command signal is removed (<1V)
Unit is supplied as delay on "contact" open
Available as delay on "contact" close - Suffix model no. with the letter C (Example VD5C) No change in price
Operating Temperature Range: 0°C to +50°C

HERMETICALLY SEALED RELAYS

Unmatched for reliability, the light weight, thermal capabilities, and high resistance to shock of these hermetically sealed relays make them ideally suited for military and industrial electronic applications.

The reliability factor stems from exacting assembly (in a "White Room" where necessary), rigid quality control, well-equipped lab facilities and precise testing procedures. These manufacturing techniques, combined with GE's advanced engineering design, produce top-quality relays with dependable characteristics exceeding those of static switching devices.

Contact resistance is held to a minimum by silver conta gold flash) combined with high contact forces.

All high-temperature components allow the operation relays in ambient temperatures between −65°C to + Units are available with studs or brackets for mounting. T line has tab brackets for printed-circuit board ap Headers can be furnished with solder hooks, three-inc plug-in (with socket availability information) and many terminals.

GENERAL ELECT

RELAYS

CR120 TYPE H GENERAL-PURPOSE RELAYS

These compact, economical relays are ideal for the highly repetitive operations required in the output of electronic equipment and in small, built-in chassis-type control panels where space is at a premium.

en, stud-mounting relay

General purpose control socket plug-in form with manual operator

FEATURES

- **Variety of Forms** — 5-amp, 10-amp relays and latch forms and current sensitive relays are available.
- **Mounting Flexibility** — forms available for front- or back-connection, plug-in or channel-mounting. Open relays either stud- or screw-mounted.
- **Small Size** — occupies only 3 to 5 cubic inches.
- **Not Position Sensitive** — relays will operate in any position.
- **Easy Connection** — combination push-on, solder-type terminals (.110 and .205 inch) available for front, back or plug-in connection.
- **Manual Operator, Indicating Light 110-250 V** — available on dust-covered, back-connected and plug-in forms permits check of relay operation.

REED SWITCH RELAYS

CR120 TYPE G

Enclosed printed-circuit

Tube-type plug-in

R12 Type G relays provide extremely ng ectrical and mechanical life.

hey e available in a wide variety of oun g and connection arrangements clud g plug-in; printed-circuit; bracket-oun or stud-mount with solder-tab, ire-vap or quick-connect terminals.

ou n select relays which perform atchi , timing, or current-sensing functions well an ON-OFF switching.

Relay are magnetically shielded. High-delit contacts are hermetically sealed n annert gas to prevent contamination.

Man standard factory modifications are vail le to meet wide application re-quire ents.

Contact Characteristics

Maxi m rating (a-c or d-c):
15 atts, resistive
1.0 mpere maximum
25 volts maximum (60 cycles rms)

Cont t resistance (initial): 30-60 milliohms

Life pectancy (electrical):
20 million operations at maximum rating
10 million operations at ½ max rating
20 million operations at low load

Resn nt frequency (reed): 1080 cps

Operation

Nom al coil power:
SPT 450 mw — SPDT latch 270 mw
DPT 680 mw — DPDT latch 580 mw
3PT 1000 mw

CR220 TYPE G

Plug-in with socket attached

Open printed-circuit

CR220 Type G relays are small, compact units that are ideal for applications where fast operating time and low power are required such as for scanning, instrumentation, counting and data processing.

These small relays are available in a variety of compact housings suitable for multi-relay applications. You can choose forms for timing functions as well as ON-OFF switching. Mounting arrangements include printed-circuit, plug-in, bracket or channel-mounting. Bracket or channel-mounted forms are available with one- or two-level solder/push-on (0.110 x 0.032 in.) or wire-wrap terminals.

Relays are magnetically shielded, contacts are hermetically sealed. A wide variety of factory modifications are offered.

Contact Characteristics

Maximum rating (a-c or d-c):
15 watts, resistive
1.0 ampere maximum
250 volts maximum (60 cycles rms)

Contact resistance (initial): 30-60 milliohms

Life expectancy (electrical):
20 million operations at maximum rating
100 million operations at ½ max rating
200 million operations at low load

Resonant frequency (reed): 1100 cps

Operation

Nominal coil power:
Printed circuit: 1P 350 mw, 2P 600 mw, 3P 700 mw, 4P 900 mw, 5P 1200 mw, 6P 1600 mw
Plug-in & bracket: 1P 350 mw, 2P 600 mw, 3P 770 mw, 4P 1000 mw, 5P 1400 mw, 6P 2300 mw, 8P 2300 mw, 12P 4000 mw

CR120 TYPE M

CR120 Type M relays are miniature units that provide fast operating time, long life, and reliability in a minimum amount of space. You can get as many as five circuits in a relay only 0.88 x 1.12 inches. They are available as enclosed printed-circuit forms.

The relays perform ON-OFF switching, and are ideal for scanning, instrumentation, counting and data processing applications.

Enclosed forms assure mechanical protection and may be ordered with or without potting compound. They are not affected by magnetic fields created by adjacent relays. All contacts are hermetically sealed to give the highest possible fidelity. The miniature reed switches are manufactured and tested under clean-room conditions.

Forms with dual winding coils, special coil voltages, alternate pin length, and electrostatic shielding are also offered.

Contact Characteristics

Maximum rating (a-c or d-c):
4 watts, resistive
0.125 ampere maximum
120 volts maximum (60 cycles rms)

Contact resistance (initial): 200 milliohms

Life expectancy (electrical):
5 million operations at maximum rating
15 million operations at ½ max rating

Resonant frequency (reed): 2000 cps

Operation

Nominal coil Power:
1P 150 mw — 4P & 5P 800 mw
2P & 3P 500 mw

GENERAL ELECTRIC

GRIGSBY-BARTON REED RELA

Everything in Reed Relays

GB21 Series. Compact, single-pole relays for PC board applications. Displace less than ½ cu. in. Available in Form A or B, and with a variety of coils to meet special needs.

Unique epoxy-filled interior design provides maximum protection from physical shock. Terminal spacing in multiples of .100 grid pattern.

Choose either nylon or steel case. The steel case provides electromagnetic shielding . . . and is available with cadmium, clear irridite or chrome plated finish.

GB31 Series. Packaged in same cases as GB21 Series. Available in mercury-wetted 1 Form A (SPST) or in dry-reed 1 Form C (SPDT).

The mercury-wetted model combines high-speed switching with low contact resistance and high-power capacity. It's excellent for either dry-ciruit switching or power switching.

GB50 Series. Heavy-duty, standard-size relays. Available in a variety of contact configurations and with multiple reed switches per package.

Chrome-plated steel case gives rugged protection—and provides electromagnetic shielding. Electrostatic shielding is optional.

GB70 Series. A compact, military-type relay in ½-size crystal can. Available in DPDT, DPST or any resulting combination of Forms A and C. Can be ordered with either PC board terminals or with "hook" terminals for solder wiring. Contacts are completely sealed.

GB129 Series. Compact, high-reliability relays for high-voltage switching. Can switch up to 20,000 volts and stand off up to 25,000 volts. Switch contacts are vacuum-sealed in a glass envelope. Nylon screws in phenolic housing permit base mounting. Available in 1 Form A and 1 Form B.

GB420 Series. Low-cost, rugged open-frame design. Choose from single or double-pole models in Form A or Form C. Molded nylon bobbin. Also available with steel jacket for electromagnetic shielding (Series 520).

GB500 Series. Low-cost, cylindrical relays suitable for PC, soldered or welded assembly. Miniature in size. Overall body length is 1 in. Max diameter is .425 in. Epoxy-molded housir Form A (SPST) and Form C (SPDT).

GB650 Series. These new miniature, tran molded reed relays cost no more than most open-frame types they replace. Miniature siz .312 in. high housing permit high-density F sembly. Inline design with exposed term Available in a full selection of Form A, Fo Mercury-Wetted Form A and Hi-voltage Fo models, with from one to six poles.

GB811 Series. These micro-miniature, 14-pin inline reed relays conform to JEDEC specifica . . . and are the only DIP-IC relays of their available with electrostatic shields and int clamp diodes. Coils are designed for 10M 40MA 5 VDC drivers. Completely-sealed, tra molded package.

Available in 1 Form A, 2 Form A, Form C and a revolutionary mercury-wetted latching Form C that's completely position insensitive!

GB2200 Standard Reedac

GB200 Phase Control Reedac

GB4200 Miniature Reedac

Reedacs

...When you think Triacs, think Reedacs

Reedacs are semi or purely solid-state, heavy-duty switches with triac capabilities. All (except miniature Reedacs) come in models rated up to 30 amps at 120 or 240V RMS. Inrush load is 10 times rating.

GB2200 Standard Reedacs. Have random, bounceless turn-on; turn-off at current zero. Can switch inductive, tungsten or resistive loads. Input can be any switch closure, DC pulse or 5 VDC logic.

They offer operation in microseconds, 500 million cycles in life, and maximum input-output isolation. Available in nylon case or steel can with octal plug.

GB7200 Synchro Reedacs®. The patented circuitry of these solid-state, synchronous switches handles inductive, capacitive, resistive or tungsten loads—with no minimum load current. It also prevents "half-wave phenomena" and delivers virtually zero RFI. Turn-on occurs no later than 4 volts into the cycle; turn-off at current zero.

Select from 60-hz and 400-hz models. Input can be switch closure, DC pulse or 5 VDC (T^2L, DTL) logic. Available in 3 nylon-case designs and steel can with octal plug.

GB4200 Miniature Reedacs. Control resistive, capacitive or inductive loads up to 2 amps, 240 volts AC. Input can be DC logic or external switch. Available in PC, wire-wrap and flying-lead designs.

GB8200 Phase Control Reedac. Designed for high-power, inductive loads providing 1.5° symmetry.

Systems, Sub Systems, Logic Cards

Grigsby-Barton can design and manufacture any type of switching or control system for you—from the simplest reed-relay logic card to the most complex multiple-card systems.

Batch Weight Logic—One of a group of logic cards developed for an in-plant automated batch weighing system

Material Transfer Logic—Typical reed relay logic card designed and produced to control a material transfer system

G-V

your complete source for timing and temperature control devices

ITEM NO.	PART	DESCRIPTION
1	C8 Series Electrical Thermostat	Hermetically sealed, adjustable, immersion e. Temp. range: −65° to +300°F. Rated 1000 W. D r-ential ±1°F. Vibration, 2000 Hz; Shock, 50g.
2	Series R, T&H Miniature Hermetically Sealed Thermal Time Delay Relay	Sealed, adjustable. Delays: 0.1-240 secs. Opera g voltages: 6.3-230V, AC/DC. Meets MIL-R-19648. 7 n plug-in or flange mountings.
3	900064 Series General Purpose Solid State Time Delay	Solid state timing circuit. Delays: 0.1-30 secs. O ating temp.: −55°C to +85°C. Operating volt e: 18-32 V DC. Vibration: 2000 Hz; Shock, 50g.
4	Red Line (DT) Series. Industrial Timing Relay	Octal size. Steel sheathed heater. Dust-proof, tam r-proof. Delays: 0.5-180 secs. Operating voltages: 1- 230 V, AC/DC.
5	Red Line (DM) Series. Instant Reset Thermal Timing Element	Provides instant reset during and after time d y when used with magnetic relay. Delays: 0.75 0 secs. Operating voltage: 6.3-230 V, AC/DC.
6	PT Series High Precision Thermal Timing Relay	±5% over −55°C to +125°C. Vibration, 20g, 2 0 Hz; Shock, 50g, 11 ms. Delays: 3-180 secs. He r Voltages: 6.3-115 V AC/DC.
7	JT Series Thermal Time Delay	Designed for printed circuit board mounting. St less internal construction. Dust-proof. Tamper-pr Delays: 2-180 secs. Operating voltages: 6.3-230 AC/DC. Also available in Instant Reset versi Series JM.
8	Thermette Series. Commercial Thermal Timer	9 Pin miniature thermal time delay. Metal enclos Dust-proof. Delays: 5-180 secs. Operating volta 6.3-26V, and 115 V, AC/DC.
9	LT Series. Sub-miniature Thermal Time Delay	Flange mounting, hermetically sealed with sea height only 40% of standard miniature timers. lays: 2-75 secs. Operating voltages: 6.3-115 V AC/ Vibration: 1000 Hz.
10	Air Flow Sensing Switch	Positive protection when air flow stops — opera alarm or automatic shut-off. Operates in any po tion. Heater voltages: 6.3, 26 and 115 V AC/DC.
11	Quick Connect Type Industrial Thermal Relay	Surface mounting, dust-proof. Time delays: 5 to seconds. Temperature compensated. Heater voltag 6.3, 26 and 115 AC/DC. Contacts SPST, NO or NC.
12	VE-2 Series Electrical Thermostat	Surface sensing thermostat. Preset or adjustab Low differential. High degree contact force/moti Vibration: 2000 Hz; Shock, 50g.

604

RELAYS AC DC

SERIES 4005 RELAY

The smallest, lightest commercially available 4 PDT relay that will switch a three-phase 10 amp. inductive or resistive load. Weighs only 2½ oz.; measures just .14" x 1.125" x 1.03". Rated 28 VDC or 115 r 115/200 V 400 cycles AC. Meets or exceed MIL-R-6106-D with no restrictions on overload r rupture tests.

SERIES 1200 RELAY

Small, efficient relay rated at 10 amperes, 115 volts, non-inductive A.C. Heavy solder lug terminals molded in phenolic block, with barriers for over-surface insulation. Up to three pole double throw contacts. Size: 1 11/16" x 1¼" x 1⅜" Approx. wt. 1.9 oz.

SERIES 2300 POWER RELAY

Has 15 amp. contacts. Inverted coil construction protects armature and contacts. Contacts D.P.D.T. U/L rated for 15 amps at 115 VAC non-inductive, or 1 H.P. at 115/230v., 60 c. Screw type terminals easily accessible. Size: 3 5/16" x 2½" x 2 1/16". Shipping wt. 8 oz.

SERIES 1220 RELAY

10 ampere DPDT or 3PDT relay is designed to reduce both cost and height by eliminating radio-type plug, extra wiring and sub-assembly between relay and plug. Complete with dust cover and mounting bracket. Plug-in, solder or quick-connect terminals. U/L listed. Size: 1 5/32" x 1 11/16" x 1 9/16". Coils available for 6-240 VAC, 6-110 VDC.

SERIES 1310 RELAY

This is Guardian's 4PDT 3 amp plug-in relay. Designed and built for maximum endurance and reliability, it is especially suitable for computers, data processing, logic systems, business machines, or any other application that requires uncompromising quality. The new 1300 Series is available AC or DC, plug-in or quick-disconnect, 6 to 115 VAC and 6 to 110 VDC. Contact rating 3 amps at 30 VDC or 115 VAC resistive.

Get your entire Control Assembly from Guardian, Complete and Ready to Plug in... Anything from a Single Switch to a complete Machine Control. • Write today.

SOLENOIDS

The Guardian solenoid line is the most complete in the industry. It includes intermittent or continuous duty types up to 230V, A.C. or up to 230V, D.C. A new line of tubular solenoids now provides a range from a pull of 50 pounds to a fraction of an ounce.

Guardian's engineering department is ready at all times to assist in modifying standard solenoids or developing custom engineered units to fit your specialized applications.

GUARDIAN® ELECTRIC

GUARDIAN ELECTRIC MANUFACTURING COMPANY, 1550 West Carroll Avenue, Chicago, Illinois 60607

HAMLIN ELECTRONICS, INC.

CONTROL-PAK®

6 Amp Solid State AC Relays and Control rs

• Highly reliable • Excellent shock and vibration immunity • Long life — no contacts to bounce or wear • Excellent surge handling ability • Zero voltage point switching.

Humidity resistant solid state 6 amp self contained AC controller is small and rugged to withstand any environment. Convenient mounting in any position.

Load circuit connects to rugged brass studs. Circuit withstands 80 amp, 1 cycle inrush currents. Operating temperatures up to 25°C without additional heat sink. Operate time: 1 ms typ. Release time: no longer than ½ cycle. Life expectancy: in excess of 100 million operations.

Hamlin Electronics produces a broad line of rapid resp se, rugged, self-contained, solid state A.C. controllers desi ed for switching resistive and inductive loads up to 40 a s. Our engineering personnel, competent in application of id state drivers, will design special solid state switching de es and electro-mechanical (or magnetically activated) ed switch devices to meet your special requirements. Our d- ern, clean, well organized manufacturing facility also rs "contract" capabilities for special packaging and mou ng of reed switches and/or reed switch devices.

SERIES 773

SERIES 723

SERIES 733

SERIES 612

SERIES 773 6 Amp Standard Controller

Available as 120 or 240 volt 50/60 Hz controls resistive, capacitive, inductive or inc descent loads. No open contacts to pit or burn. No arcing, and zero current point turn reduces R.F.I.-E.M.I. Contacts: SPST — normally open. Overall size, 2.5 x 1.25 x 1.1 Average weight, 2¼ oz.

Part Number	Coil Volts	Coil Res.	Coil mA	50/60 Hz Volts	Each 1-9	10-24	25-49	50-9
773-11-030	****	****	****	120	8.95	8.00	7.50	7.2
773-11-130	5 VDC	175 ohms	28	120	10.75	9.75	9.25	8.8
773-11-330	24 VDC	2800 ohms	8	120	10.75	9.75	9.25	8.8
773-12-030	****	****	****	240	10.05	9.50	8.55	8.2
773-12-130	5 VDC	175 ohms	28	240	13.80	12.45	11.75	11.3
773-12-330	24 VDC	2800 ohms	8	240	13.80	12.45	11.75	11.3

SERIES 723 Zero Voltage Point 6 Amp Solid State Switching Controller

R.F.I. and E.M.I. can be reduced to insignificant values by switching "ON" as the A voltage wave goes through zero. Eliminates brute force filtering of transients. Contac SPST — normally open. Overall size, 2.61 x 1.5 x 1.463". Average weight, 3½ oz.

Part Number	Coil Volts	Coil Res.	Coil mA	50/60 Hz Volts	Each 1-9	10-24	25-49	50-9
723-21-000	****	****	****	120	20.50	18.50	17.40	16.4
723-21-100	5 VDC	175 ohms	28	120	23.00	20.70	19.60	18.4
723-21-300	24 VDC	2800 ohms	8	120	23.00	20.70	19.60	18.4
723-22-000	****	****	****	240	23.00	20.70	19.60	18.4
723-22-100	5 VDC	175 ohms	28	240	25.50	23.00	21.75	20.4
723-22-300	25 VDC	2800 ohms	8	240	25.50	23.00	21.75	20.4

SERIES 733 Latching 6 Amp Solid State AC Controller

Heavy A.C. load controlled by pulses. D.C. pulses at rated voltage one millisecond or long will "SET" or "RESET" controller. No need to continually dissipate power to hold "ON Contacts: SPST — normally open. Overall size, 2.61 x 1.5 x 1.15". Average weight, 2½ o

Part Number	Coil Volts	Coil Res.	Coil mA	50/60 Hz Volts	Each 1-9	10-24	25-49	50-99
733-31-100	5 VDC	150 ohms	33	120	10.60	9.55	9.00	8.70
733-31-300	24 VDC	2200 ohms	110	120	10.60	9.55	9.00	8.70
733-32-100	5 VDC	150 ohms	33	240	15.05	13.55	12.80	12.35
733-32-300	24 VDC	2200 ohms	110	240	15.05	13.55	12.80	12.35

SERIES 612 Fractional H.P. 2½ Amp per Phase 3 Phase Solid State Controller

Small dependable three phase controller capable of heavy starting overloads up to 8 amp per phase (one cycle). Quiet operation greatly reduces R.F.I. and E.M.I. Ideal for sma three phase motor control particularly when used in conjunction with low level logi Contacts: 3 PST — normally open. Overall size, 2.61 x 1.5 x 1.82". Average weight, 4¾ o

Part Number	Coil Volts	Coil Res.	Coil mA	50/60 Hz Volts	Each 1-9	10-24	25-49	50-99

INTEGRATED DRIREED RELAY

"IDR" SERIES

g "IDR" Integrated Drireed Relay is a miniaturized relay for Digital Integrated ckage, DIP), mounting. It can be mount- in the tandard in line, 14 pin, IC layout d operated from standard 5 Volt IC cuitry.

AILABLE IN SPNO CONTACT FORM ONLY.

PERATING SPECIFICATIONS:

ntact ating: Current; 0.5 Amp max.
Voltage; 100 Volts max.
Volt Amperes; 10 max.
Carry Load; 1.0 Amp max. (non-switching)

ntact esistance: Initial; 0.100 Ohms max.
After Life; 1.0 Ohms max.

fe Exictancy: Low Level; 100 x 10^6 Operations.
28 V DC, 0.125 Amps; 5 x 10^6 Operations.

lectr Strength: 300 V AC, rms, 60 Hz.

sulati Resistance: 10^8 Ohms min. @ 25°C.

perat Time (including bounce): 500 microseconds.

elease Time (including bounce): 100 microseconds max.

COIL CHARACTERISTICS @ 25°C:

P/N	Nominal V DC	Must Operate	Must Release	Resistance Ω ±10%	Max. V DC
565-0001	3.0	2.0	0.2	24	5.0
565-0002	5.0	4.0	0.4	90	9.0
565-0003	12.0	8.0	0.8	385	19.5
565-0004	24.0	16.0	1.6	1200	34.5

ENVIRONMENTAL:

Temperature Range: −40°C to +85°C.
Vibration: 20 G's @ 0 - 5K Hz.
Shock: 100 G's.

MICRO-MINIATURE DRIREED RELAYS for high density packaging

adaptable for packaging with IC and monolithic solid state devices

SPECIFICATIONS

CONTACT CONFIGURATION: SPST - NO - (one form A)

DIELECTRIC STRENGTH:
200 V a-c rms 60 Hz between open contacts,
500V a-c rms 60 Hz contact to coil.

CONTACT RATING:
Switches up to ¼ Ampere.

INITIAL CONTACT RESISTANCE:
200 milliohms maximum.

MEAN TIME TO FAILURE*		
Load		Operations
.02mA	.012 V d-c	50,000,000
.01A	.05 V d-c	20,000,000
.125A	12 V d-c	10,000,000
.125A	28 V d-c	2,000,000
.250A	12 V d-c	1,000,000

*Failure is defined as 5 misses in 100,000 operations.

SWITCHING SPEED:
1.0 ms maximum including bounce.
Release time .5 ms

ENVIRONMENTAL CHARACTERISTICS:
Shock: 35 g's 11 ±1 ms duration.
Vibration: 15 g's 10 to 2000 Hz
Temperature — Operating: −55° to +75°C.
Storage: −65° to +85°C.

SIZE:
.230" diameter x .600" long.

LEADS:
Weldable, solderable.

CASE:
Polyvinylidene fluoride with nylon end covers.

INSULATION RESISTANCE: 10^{10} ohms at 100 V dc between mutually isolated terminals.

Part Number	66625-1	66625-2	66625-3	66625-4

INTERMEDIATE SIZE DRIREED RELAYS

"R" SERIES

OPEN FRAME
Also available with snap-on magnetic shielding case.

OPERATING CHARACTERISTICS

Maximum Continuous Rating @ 25°C
- 6 volt coils ..... 7.5 V d-c
- 12 volt coils ..... 15.0 V d-c
- 26 volt coils ..... 32.5 V d-c

Must Operate (Maximum) @ 25°C
- 6 volt coils ..... 4.2 V d-c
- 12 volt coils ..... 8.3 V d-c
- 26 volt coils ..... 16.5 V d-c

Must Release (Minimum) @ 25°C
- 6 volt coils ..... 0.4 V d-c
- 12 volt coils ..... 0.8 V d-c
- 26 volt coils ..... 1.5 V d-c

Environmental
AMBIENT TEMP. RANGE
Oper.: −55 to +75°C
Storage: −65 to +85°C
VIBRATION 20 g's to 1000 Hz
SHOCK 35 g's
ALTITUDE 0 to 50,000 feet

ELECTRICAL SPECIFICATIONS

Contact Resistance — 100 Milliohms max. Initial
2 Ohms End of Life

Dielectric Strength
350 VRMS 60 Hz Open Contacts (Form A)
500 VRMS 60 Hz Between Mutually Isolated Members

Contact Life — Up to 5 x 10^9 Operations

Load Rating
Gold Alloy Form "A": Dry to 125mA, 4 watts max.
Gold Alloy Form "C": Dry to 125mA, 2 watts max.
Rhodium Form "A": 10mA to 1A, 10 watts max.

Operate Time (Including Bounce)
One Form A — 1.5 Millisecond

Insulation Resistance — 10^{10} Ohms Minimum @ 25°C

Contact Arrangement
- 1 Thru 4 ..... Form A
- 1 Or 2 ..... Form B

DRIREED RELA'S

"R" SERIES

HEAVY WALL, SEAMLESS CONSTRUCTION
SHIELDED CASE
STRAIN RELIEVED COIL
WELDED TERMINATION

OPERATING CHARACTERISTICS

Maximum Continuous Rating @ 25°C
6 volt coils ..... 7.2 V d-c
12 volt coils ..... 15.0 V d-c
26 volt coils ..... 32.0 V d-c

Must Operate (Maximum) @ 25°C
6 volt coils ..... 4.0 V d-c
12 volt coils ..... 8.0 V d-c
26 volt coils ..... 18.0 V d-c

Must Release (Minimum) @ 25°C
6 volt coils ..... 0.2 V d-c
12 volt coils ..... 0.5 V d-c
26 volt coils ..... 1.0 V d-c

Environmental
AMBIENT TEMP. RANGE | VIBRATION 20 g's to 1000 Hz
Operating: 0 to +85C° | SHOCK 35 g's
Storage: −55 to +85C° | ALTITUDE 0 to 50,000 feet

ELECTRICAL SPECIFICATIONS

Contact Resistance — 200 Milliohms max. ial
2 Ohms End of Life

Dielectric Strength
250 VRMS 60 Hz Open Contacts (Form A)
500 VRMS 60 Hz Between Mutually Isolated M bers

Contact Life — Up to 5×10^9 Operations

Load Rating
Gold Alloy Form "A": Dry to 125mA, 4 wa max
Gold Alloy Form "C": Dry to 125mA, 2 wa max
Rhodium Form "A": 10mA to 1A, 10 wa max

Operate Time (Including Bounce)
One Form A — 1.0 Millisecond
One Form C — 1.5 Milliseconds

Insulation Resistance — 10^{10} Ohms Minimum 25°C

Capacitance
5PF Max. Between Any Two Switching Elem s

DRIREED RELAYS

"LS" SERIES

LOW SILHOUETTE OPEN FRAME
Low-loss, spot welded reed to pin connection.
Also available with snap-on magnetic shielding case.

OPERATING CHARACTERISTICS

Maximum Continuous Rating @ 25°C

6 volt coils	7.5 V d-c
12 volt coils	15.0 V d-c
26 volt coils	32.5 V d-c

Must Operate (Maximum) @ 25°C

6 volt coils	4.2 V d-c
12 volt coils	8.3 V d-c
26 volt coils	16.5 V d-c

Must Release (Minimum) @ 25°C

6 volt coils	0.4 V d-c
12 volt coils	0.8 V d-c
26 volt coils	1.5 V d-c

Environmental

AMBIENT TEMP. RANGE	VIBRATION 20 g's to 1000 Hz
Operating: 0 to +75C°	SHOCK 35 g's
Storage: −55 to +85C°	ALTITUDE 0 to 50,000 feet

ELECTRICAL SPECIFICATIONS

Contact Resistance — 200 Milliohms max.
2 Ohms End of Life

Dielectric Strength
250 VRMS 60 Hz Open Contacts (Form A)
500 VRMS 60 Hz Between Mutually Isolated

Contact Life — Up to 5 x 10^9 Operations

Load Rating
Gold Alloy Form "A": Dry to 125mA, 4 w
Gold Alloy Form "C": Dry to 125mA, 2 w
Rhodium Form "A": 10mA to 1A, 10 w

Operate Time (Including Bounce)
One Form A — 1.0 Millisecond
One Form C — 1.5 Milliseconds

Insulation Resistance — 10^{10} Ohms Minimu

Contact Arrangement
1 Thru 4
1 Or 2
1 Thru 2

HART-ADVANCE RELAYS & SOLENOIDS

quality products for critical applications

VERSAPAC Our miniature cradle type relay. Designed to provide telephone relay performance at a modest price. Long life with miniature size augmented with 3 and 5 ampere contact ratings. This design is available in standard 2, 4, 6 & 8 pole contact configurations. Printed circuit versions as well as socketed assemblies are standard options.

GH SERIES General purpose, 1, 2 & 3 pole, 5 & 10 ampere contact rating. GHU series U/L recognized for open and enclosed versions for up to 240 volt switching applications. Enclosed versions available with octal and 11 pin plugs.

W SERIES A U/L approved standard enclosed power relay designed especially for single and two phase circuit switching. Contact rating 25 amps at 120 or 240 V AC. Compact design measures 1½" square by 1⅞" high. Standard AMP quick disconnect terminals provide maximum flexibility for wiring ease. Companion socket WPS-C1 likewise U/L recognized for 250 volt usage. Standard AC and DC coils are shelf items at our distributors.

SOLENOIDS Solid frame solenoids, made of high-grade steel in all parts of the magnetic circuit. Frame is dovetailed and staked to the end plate for added mechanical strength and increased performance ability. Solid frame supplemented by type 51 laminated frame unit designed and engineered to meet the most stringent AC requirements. Compact size makes installation easy. Voltages: DC, 6 to 115; AC, 6 to 460. Wide selection of special features available for specific applications.

And there are more!

Hart-Advance has a *broad line* of high quality relays and solenoids for all of your applications in: telephone service; power service; general purpose; antenna; sensitive; time delay; high voltage and micro-miniature applications.

A wide range of crystal can relays for stringent military and industrial relays are also available, including QPL versions.

For full details and valuable engineering data, write for our new OEM data sheets or Distributor Catalog.

THERMAL TIME DELAY RELAYS
ELECTRONIC TIME DELAY RELAYS
MOTOR OVERLOAD RELAYS

ITEM	DESCRIPTION
THERMAL TIME DELAY RELAYS	
1	**H-101 Series.** Panel mount. Standard time delays available over a range of values from 5 sec. to 180 sec. Other delays available on special request. Standard heater voltages available 6.3, 12, 24, 48, 115 and 230. Other heater voltages available on special request. Contacts, snap action: SPNO, SPNC and SPDT, 2 amp at 115V resistive. Temperature compensated from 0° to 160°F.
2	**H-310 Series.** Plastic, octal plug. Specifications same as H-101 Series.
3	**H-320 Series.** Metal, octal plug. Specifications same as H-101 Series.
ELECTRONIC TIME DELAY RELAYS	
4	**H-650 Series.** Miniature plug-in type. Load capacity 2 amps at 28V DC. Operating voltage 24V AC and 24 and 48V DC. Standard time delays available over a range of values from 0.5 to 100 sec. Other delays available on special request. **General Specifications:** Contact arrangement: SPNO, SPNC, SPDT, DPDT. Repeat accuracy: ±2% timing, ±10% voltage, ±20°F. variation. Life: 1,000,000 cycles (minimum). Adjustments: screwdriver or preset. Also remote potentiometer to customer specifications. Reset time: 0.1 to 0.025 sec. based on initial delay.
5	**HL-650 Series.** Miniature plug-in type. Load capacity 2 amp at 120V AC. Operating voltage 115V AC. Standard time delays available over a range of values from 0.5 to 100 sec. Other delays available on request. Adjustments: screwdriver or preset. Also remote potentiometer to customer specifications. General specifications same as H-650 Series.

ITEM	DESCRIPTION
6	**H-620 Series.** Heavy-duty plug-in type. Load 5 and 10 amps at 115V AC. Operating voltag 115V AC and 24, 30 and 48V DC. Standard tim available over a range of values from 0.5 to Other delays available on request. Availa knob adjust, screwdriver lock, or preset. Also potentiometer to customer specifications. specifications same as H-650 Series except duty.
7	**H-600 Series.** Heavy-duty panel mount type. strip, screw or quick connect terminals. L pacity 5 and 10 amps at 115V AC. Standa delays available from 0.5 to 100 sec. 230 input and other delays available on request. A with knob adjust, screwdriver lock, or prese remote potentiometer to customer specifi General specifications same as H-650 Series heavier duty.
MOTOR OVERLOAD RELAYS	
8	**H-400 Series.** Standard full load current range able in 27 different models from 1.0 to 50 Other non-standard ranges available on r Choice of either automatic or manual reset. F current setting is adjustable over the range relay or may be factory preset. Relays availab trip time characteristics from "super" fast to s match your motor curve. Temperature compen available from −60°F. to 160°F.
9	**H-410 Series.** Same characteristics as H-400 except full load current range is from 25 to 150 in 12 different models.

For additional information on any of the above devices, write for Engineering Data Sheets.

HC HOAGLAND INSTRUMENT COMPANY / 65 CHESTNUT ST. / RED BANK, N.J. 07701 / PH: 201-741-3

we make enough printed circuit boards, transformers, power supplies, thick film ic's, relays, solenoids and timing and sensing devices to build a great computer.

The fact is, whatever type of complex electronics equipment you make, Hi-G can provide you with a unique combination of products and services. The fact is, our engineering staff has the product capability—and the design resources—to answer your toughest component and sub-system electronics questions.

Custom design and manufacture is the name of our game. Competitive pricing is second nature to us. And Quality Control is our way of life.

It all adds up to fewer production problems, better quality, and higher profitability for you and your finished equipment. Why not get in touch with us today? Write Hi-G, Inc., 580 Spring Street, Windsor Locks, Connecticut 06096. (203) 623-2481.

Hi G

MA & MS TO-5 SERIES RELAY

GENERAL SPECIFICATIONS

CONTACT CAPABILITIES

RATING
10,000,000 operations at low level. 1,000,000 operations at 0.5 amp, 28V d-c resistive load. 100,000 operations at 1.0 amp, 28V d-c resistive load.

CONTACT RESISTANCE
0.1 ohm maximum before life (measured 1/8" from header). 0.2 ohm maximum after life at maximum rated current (measured 1/8" from header).

CONTACT BOUNCE
1.5 milliseconds maximum

OVERLOAD
2 amps at 28V d-c for 100 operations minimum

INSULATION RESISTANCE
10,000 megohms minimum between mutually insulated terminals

ENCLOSURE
Hermetically sealed. All welded.

ENVIRONMENTAL CHARACTERISTICS

TEMPERATURE RANGE
−65°C to +125°C. (Higher temperature ratings on special order)

VIBRATION
.06" DA or 30G, 10-3000 cps.

SHOCK
80 G's

MILITARY SPECIFICATIONS

All Hi-G MA and MS Series relays are manufactured in accordance with Military Specification MIL-R-5757 and its applicable detail specification.

RELAYS WITH EXTRA DIMENSION

NEW

the MINI- G®

.150 GRID RELAY — SERIES G Product Bulletin 95

All welded, DPDT relay manufactured in accordance with MIL-R-5757/37.

SPECIFICATIONS

ELECTRICAL CHARACTERISTICS

Sensitivity at 25°C: 135 mW.

Life: 100,000 operations min at rated load and 125°C.

Overload: 2 amps at 30 VDC for 100 operations min.

Contact Resistance:

(a) 50 milliohms initial at rated load.
(b) 150 millichms after rated life.
(c) 3Ω max during min. current life.
(d) 50Ω max at 10 mA and 30 mV rms.

Contact Bounce: 1.2 ms max measured at 100 mA at 6 DVC.

Operate Time: 4.0 ms max at nom coil voltage at 25°C (including bounce)

Release Time: 4.0 ms max at 25°C (including bounce)

Dielectric Strength: 500 V rms between all mutually insulated points at sea level; 750 V rms between contacts and case.

Insulation Resistance: 1000 MΩ min between mutually insulated terminals.

CONTACT RATING

1 ampere resistive at 30 volts DC max, 0.25 ampere resistive at 115 volts rms, 400 Hz, case grounded, low level 0 to 0.1 ampere at 50 mV DC or AC, Minimum Current per MIL-R-5757/37 (100,000 operations min)

2 ampere resistive at 30 volts DC max (50,000 operations min)

ENVIRONMENTAL CHARACTERISTICS

Temperature Range: —65°C to +125°C.

Vibration: 0.5" DA from 5-34 Hz, 30 G from 34-3000 Hz, 10 μs max contact opening.

Shock: 100 G (11 ms duration), saw tooth, 10 μs max contact opening.

Acceleration: 100 G.

Leakage Rate: 1 x10⁻⁸ cc/c max.

WEIGHT

0.13 oz.

Authorized Hi-G dealers are located throughout the U.S. and Canada

Hi G

PRODUCTS

The following relays are qualified to the requirements of MIL-R-5757/E.

4A F SIZE CRYSTAL CAN RELAY — SERIES 2K-2299-M5757/9

Temperature range	−65°C to +125°C	Vibration	20G @ 10-2000 Hz
Operate and release time	4 ms max.	Shock	100 G

YSTAL CAN RELAYS

ENVIRONMENTAL CHARACTERISTICS FOR STANDARD CRYSTAL CAN SERIES

Life: 100,000 operations at 125°C and rated load.
Temperature: −65°C to +125°C, operating.
Vibration: 10 to 2000 Hz, 20G min.
Shock: 100 G
Sealing: Hermetic, to 80,000′

Insulation Resistance: 1000 megohms min., except coil-to-case at high temperature 500 megohms min.

Dielectric Strength: Contacts-to-case: 1000 volts rms, 60 Hz, mutually insulated terminals: 500 volts rms standard.

UBE® — MINIATURE RELAY — SERIES C

Product Bulletin 101

CONTACT RATING
2 amperes resistive at 30 volts DC, 1 ampere 400 Hz, case grounded and dry circuit.

176	76	90	44	4	3500
215	115	125	66	5	5000

E: types for operation at 60 to 400 Hz with specifications ts may be used at higher frequencies, but individual oltage may change.
only available as standard catalog item.

CRYSTAL CAN RELAY — SERIES 2BN

Product Bulletin 120A

CONTACT RATING
5 amperes resistive at 30 volts DC; 3 ampere resistive at 115 volts rms, 400 Hz, case grounded; 2 ampere resistive at 115 volts rms, 60 Hz, case grounded.

NOTE: For AC operation BNR types are available on request.

HERMAL EMF RELAYS — SERIES EK-EB Product Bulletin 156

CONTACT RATING
The series EK & EB have been specifically designed to minimize the thermal EMF generation of the relay contacts during low level switching. Although the design is centered around this low level application, the relay is capable of switching signals up to and including 2 amperes at 30 VDC.

Relay Type	Series 2EK	Series 2EB
Rated Contact Current	2 Amperes	2 Amperes
Maximum Weight	0.37 Ounce	0.95 Ounce
Construction	All Welded	All Welded

Type	Voltage Code	Nominal DC Coil Voltage	Max Continuous Coil Voltage	Max Pull-in Voltage @ 25°C	Min Drop-out Voltage @ 25°C	DC Coil Resistance Ohms ±10% @ 25°C
2EK	106	6	7.2	3.1	.35	40
or	112	12	14.4	6.3	.75	160
2EB	126	26.5	32	13.0	1.5	675

THERMAL EMF: 10 microvolts max. between closed contacts with relay at room ambient and coil energized and stabilized with nominal rated voltage.

The thermal EMF generation is measured on EK and EB relays while enclosed in a chamber that provides a shielded test condition and a still air environment.

All inter-connections are symmetrical to minimize function variations. Measurements are made using a high impedance micro voltmeter.

ENVIRONMENTAL CHARACTERISTICS FOR STANDARD CRYSTAL CAN SERIES

Life: 100,000 operations at 125°C and rated load.
Temperature: −65°C to +125°C, operating.
Vibration: 10 to 2000 Hz, 20G min.
Shock: 100 G
Sealing: Hermetic, to 80,000′

Insulation Resistance: 1000 megohms min., except coil-to-case at high temperature 500 megohms min.

Dielectric Strength: Contacts-to-case: 1000 volts rms, 60 Hz, mutually insulated terminals: 500 volts rms standard.

Authorized Hi-G dealers are located throughout the U.S. and Canada

YSTAL CAN RELAYS (Cont'd.)

DIO FREQUENCY RELAYS

uct Bulln 155

ndard ut and output connections from RF contacts are 196/U flon insulated coaxial cable, 6″ in length, rmina d. Other lengths, types of cable, or coaxial connector inatio available on special order. These relays meet or eed th pplicable portions of MIL-R-5757/D and MIL-R-3928.

RADIO FREQUENCY CHARACTERISTICS	
Frequency Range	0 - 500 MHz*
Voltage Standing Wave Ratio (VSWR)	<1.1:1 typical
Insertion Loss	0.16db typical
Characteristic Impedance	50 ohms†
Crosstalk	−50db typical

** Usable to 1000 MHz with reduced RF characteristics*
† Other impedances available on special order

CE UBE RADIO FREQUENCY RELAY — SERIES RFC

Operate Power 150 mW

Relay Type	RFC
Size	0.5-inch cube
Contact Rating	200 watts RF cold switching 75 watts RF hot switching
Maximum Weight	0.3 ounce (without terminations)

NOTE: Electrical characteristics same as series C

LF IZE CRYSTAL-CAN RADIO FREQUENCY RELAY — SERIES RFK

Operate Power 250 mW

Relay Type	RFK
Size	.4 x .8 x .4 inch
Contact Rating	200 watts RF cold switching 75 watts RF hot switching
Maximum Weight	0.37 ounce (without terminations)

NOTE: Electrical characteristics same as series K

TC ING HALF SIZE CRYSTAL-CAN RADIO FREQUENCY RELAY — SERIES RFKL

Operate Power 150 mW

Relay Type	RFKL
Size	.4 x .8 x .4 inch
Contact Rating	200 watts RF cold switching 75 watts RF hot switching
Maximum Weight	0.37 ounce (without terminations)

NOTE: Electrical characteristics same as series KL

YS AL-CAN RADIO FREQUENCY RELAY — SERIES RFB

Operate Power 250 mW

Relay Type	RFB
Size	.875 x .800 x .400 inch
Contact Rating	200 watts RF cold switching 75 watts RF hot switching
Maximum Weight	0.95 ounce (without terminations)

NOTE: Electrical characteristics same as series B

H ENSITIVITY RADIO FREQUENCY RELAY — SERIES RFBC

Operate Power 40 mW

Relay Type	RFBC
Size	1.275 x .800 x .400 inch
Contact Rating	200 watts RF cold switching 75 watts RF hot switching
Maximum Weight	1.0 ounce (without terminations)

NOTE: Electrical characteristics same as series BC

VI NMENTAL IA CTERISTICS R ANDARD YS L CAN SERIES

Hi-G, Inc., offers complete in-house capabilities for producing the highest quality power supplies custom designed to offer you optimum performance. This total capability includes the manufacture of transformers printed circuit boards, and we even have our own hybrid thick film facilities to supply all needed integrated circuits. With this complete manufacturing ability, Hi-G is able to supply *fast prototype service.*

For Hi-G POWER SUPPLIES the foremost criterion is QUALITY. High quality is built-in, from the careful design and breadboarding of all circuits, up to the final assembly of computer grade (or MIL) compon nt heavy gauge, plated rack or chassis. Every unit t burned-in for 24 hours, and rechecked. A co final test data is shipped with each power su ly test systems are available to provide backup da MTBF ratings when required.

The Hi-G philosophy is to achieve the opti um formance at LOW COST. We design power su pl perform the specific functions that your appli ti quires. The final product must meet both o ec low cost and the required performance in you sy Let Hi-G help you solve your power supply requ en

- **Multiple outputs**
- **Long term stability**
- **Maximum regulation**
- **A fast acting crowbar**
- **IC regulators for reliability and stability**
- **Undervoltage protection**
- **Special sequencing for turnon (or sh do**

For assistance in specifying your power supply, whatever your requirements, send your drawings and/or spec sheets:

LECTRONIC TIME DELAY RELAYS, VOLTAGE & PHASE SENSORS

SOLID STATE TIMING MODULE - SERIES 1800/1900 (Product Bulletin 168)

The Hi-G Timing Module is an all solid-state timer that offers excellent reliability over a useful life well in excess of one million operations. It has a fast reset time, is remarkably stable over a wide temperature range, and can provide delays as short as 10 milliseconds.

DELAY-ON-RELEASE TIMERS - SERIES 5600/5700/5800 (Product Bulletin 162)

The time period of a delay-on-release timer begins with removal of control power. Prior to this the unit is energized and remains so until control power is removed and the delay period completed.

Hi-G offers the Series 5600 in fixed delay times and the Series 5700 as adjustable with external resistor, both with electromechanical relay output. The Series 5800 is all solid state and capable of driving most crystal can relays.

VOLTAGE SENSING RELAY/DC VOLTAGE LEVEL MONITOR - SERIES 1310 (Product Bulletin 181)

The Hi-G 1310 Series Voltage Sensor is essentially a voltage monitoring circuit operating on a snap-action transistor circuit with low drift and inherent temperature compensation. This device will either open or close a circuit when a predetermined voltage is present at its input.

PHASE SENSING RELAY 3Φ POWER SYSTEM MONITOR - SERIES 1400 (Product Bulletin 180)

Hi-G Phase Sensors monitor three-phase power systems. Two types of Phase Sensors are available as standard items, the P-type and the Q-type. P-type units will energize only when all three phases are in the proper sequence. They will deenergize only when power is removed. Q-type units perform the same functions as the P-type and, in addition, they will also deenergize if any phase is disconnected or grounded. The voltage of the faulted phase or the regenerated voltage must be below 70 percent of the nominal phase-to-phase voltage.

HI-G, INC. ELECTRONIC PRODUCTS DIVISION Spring Street and Route 75, Windsor Locks, Connecticut 06096.

CLOSED SOLENOIDS

Tec agnetics solenoids offer the widest, most complete line of solenoids ever produced for industrial anc ilitary applications. Tec Magnetics offers in-depth experience and capabilities for custom designing sol oids to meet particular requirements. These include PUSH-PULL pressurized and nonpressurized as vel s PUSH-TYPE manual override.

NON-PRESSURIZED

PRINTED CIRCUIT BOARDS

Defiance is a pioneer in the art of printed circuitry. We offer our customers state-of-the-art facilities and capabilities which assure them the highest quality for even the most complicated circuit boards. Accurate comparison of artwork and manufacturing drawings detect contradictions and eliminate errors. Skilled technicians and latest equipment assure premium quality photographic documents. Modern chemical process control and advanced experience with precious metals provide consistent plated finishes. Defiance was one of the first independent companies to employ numerical control drilling exclusively. And we deliver on time at competitive prices.

CALL MERRIMACK FOR ALL YOUR TRANSFORMER REQUIREMENTS

Ferroresonant Transformers – Merrimack ferroresonant (constant voltage) transformers provide reliable and economical circuit protection from wide variations of input voltages. Made to order, they include all types of line and load regulated power transformers.

Ferroresonant Power Supplies – Merrimack rack mounted constant voltage or ferroresonant power supplies provide the user an economical means of supplying low voltage, high current DC power at 50 or 60 cycles.

Linear Transformers and Inductors – Merrimack linear transformers and inductors are built to the customer's specifications. They include power, audio, plate, saturable, interstage, and square wave transformers for military and industrial applications.

National representatives are available to assist in establishing requirements or call Sales Manager at...

GENERAL PURPOSE RELAYS from KURMAN STOCK

SERIES 26

elays are stocked in dc and ac coil voltages with contacts to 4pdt in the nd to 3pdt in the dust covered type. Standard contact rating at 28 vdc for open type is 20 amps to 3pdt, 10 amps for 4pdt; 10 amps for all d plug in relays. Series 26 relays are rated for 15 g's shock, 10 g's om 10 to 500 Hz. Series 26D relays (dust covered plug in) are available tor lights across the coil.

SENSITIVE RELAYS from KURMAN STOCK

SERIES 5

Series 5 Relays are current sensitive with 10 milliwatts sensitivity for the spdt and 100 mw per pole sensitivity for multipole types. Standard contact ratings at 28 vdc or 115 vac are 2 amps for spdt, 5 amps for multipole relays. Series 5 relays are available from stock in open and dust covered plug-in versions.

ULTRA SENSITIVE RELAYS from KURMAN STOCK

SERIES 300

Series 300 Ultra-Sensitive relays operate on only 2 milliwatts of power and yet can switch ½ amp at 28 vdc or 1 amp at 115 vac. They are ideal in low power input circuits where available power is at a minimum. They provide extremely low drain in battery operated equipment.

MINIATURE TELEPHONE RELAYS from KURMAN STOCK

SERIES **M**

Stocked only in 4pdt contacts, Kurman Miniature Telephone Relays, Series M, have 3 amp contacts, withstand 15 g's shock and 10 g's vibration from 10 to 500 Hz. Two specific ac models (hermetically-sealed only) and four open dc types, are stocked.

VACUUM RELAYS

Standard DC actuating coils are designed for 125 degrees C. ambient temperature with high temperature coils available for operation at ambients up to 175 degrees C. Coils rated for operation at 110 vdc are also available for most types. These relays can be selected for operation in more difficult vibrati environments than those specified. They are also ava able on request with heavy duty screw connectors f higher voltage and current ratings.

VACUUM COAXIAL RELAYS

Jennings vacuum coaxial relays are available in a wide range of power levels ranging from BNC connectors to 6⅛ inch line. They are all designed to match 50 ohm impedance and all those described here are actuated by 26.5 vdc coils. Matching connectors to fit Jennings low voltage connector receptacle can be obtained at extra cost. The power rating in the specifications table is for the frequency at which the relay is most commonly used. Faster operate times than those listed can be obtained on most units by capacitor discharge actuation.

For further details on Jennings complete line of vacuum coaxial relays, request Catalog No. 103.

HIGH VOLTAGE VACUUM CONTACTORS

Jennings contactors are used for controlling dc, rf, and 60, and 400 Hz circuits at all voltage levels. Their rinc use is in high power electronic equipment but son of unique advantages of switching in a vacuum make t m u ful in many industrial applications. Vacuum conta rs inherently equipped for such applications as test, pr uct or processing equipment use which require long co act without maintenance, low cost, high voltage control, sea contact use because of the difficult environmental equ ments.

HIGH VOLTAGE RF CONTACTORS

These high current contactors hav bee designed especially for radio frequen cu rents. They are unequaled for RF a plic tions because of the vacuum er ose contacts which offer low, stable ntac resistance.

Solenoid, air, or motor driven mod s ar available. They may also be obtaine with out an actuator.

Unit	Peak Testing Voltage 60 Hz	Peak Operate Voltage 32 MHz	Continuous Current 32 MHz Rms	Contact Resistance Ohms Max. THREE PHASE VACUUM CONTACTORS

These contactors are the smallest power contactors available at their power level. Their vacuum enclosed contacts require no maintenance, operate at higher speeds (less than 3 cycles), and are longer lasting than other power contactors. They are obtainable at 60 Hz current levels of 250, 300, 600, or 900 amps with operating voltages to 1500 volts. They are also available with other choices of ac or dc actuating voltages than those shown. Major uses include primary control of power supplies in high power transmitters, heating equipment, and industrial controls.

Model Number	Operate Voltage 50/60/400 Hz	Operate Current 60 Hz	Interrupt Current Amps Rms	Mech. Life (Min.)	Actuator Voltage	Approx. Pull-in Current Amps Rms	Approx. Hold Current Amps Rms	Interrupt Time	Auxiliary Contacts	Weight

HIGH VOLTAGE MEASURING EQUIPMENT

MODEL J-1005 HIGH VOLTAGE SOLID STATE VOLTMETER

Compact, portable instrument for the accurate, direct reading of very high voltages at audio and power frequencies . . . determination of the amplitude of pulses with oscilloscope connections for viewing wave shapes . . . removable high voltage input circuit for remote panel mounting of the meter . . . internal battery and ac line operation.

Voltage Ranges:

Pe Kilovolts (single-ended)
2.5, 0-5, 0-10, 0-25, 0-50

Pe Kilovolts (double-ended)
2.5, 0-5, 0-10, 0-25, 0-50, 0-100

Frequency Response: Flat from 10 Hz to 20 kHz at full rated voltage. Internal resonances are above 100 MHz.

Accuracy: ±3% on all voltage ranges.

Oscilloscope Connection: 600 to 1 division ratio (approx.).

Meter Calibration: The meter is calibrated in peak kilovolts with linear voltage scales of 0-2.5, 0-5, 0-10, 0-25 and 0-50.

Input Impedance: Greater than 2 x 10^{12} ohms and approx. 4 pf single-ended to ground, 2 pf double-ended.

Power Supply: 117 volts ±10%, 50/60 Hz, 5 watts, or rechargeable battery.

Dimensions: Height, 16"; width, 10¾"; depth, 8".

Net Weight: 12 pounds (approx.).

Ranges can be doubled by using JCD5 series capacitors.

MODEL JP-325 HIGH VOLTAGE AC PROBES

Voltage: 40, 50, 60 kv peak.

Division Ratio: Approximately 325:1 to termination of 3 ft. of RG-58A/U cable. (Dividing capacities are 2.8 pf at the high voltage end and 890 pf at the low voltage end).

Current: 12.5 amperes rms maximum through the voltage divider.

Input Impedance: Above 10^{12} ohms, 4 pf.

High Frequency Response: 20 MHz at 50 kv peak, 50 MHz at 20 kv peak.

Low Frequency Response: 1000 Hz when operated into 1 megohm shunt resistance; 100 Hz when operated into 10 megohm shunt resistance; internal resonance above 100 MHz.

Weight: 2 lbs. 4 oz.

MODEL JHP-70A HIGH VOLTAGE TESTER

The smallest and lightest instrument available at its power level the JHP70A will generate and measure 70,000 volts peak for on-site testing of high voltage components such as capacitors, switches, transformers, bushings, vacuum tubes, etc.

Maximum Output Voltage ..... 70 KV Peak
Maximum Continuous Current ..... 30 MA RMS
Short Circuit Current (Est.) ..... 100 MA RMS
Power Requirements ..... 105-125 Volts RMS
Frequency ..... 50-60 Hz
Current ..... 8 Amps
Surge Current ..... 16 Amps
Weight:
Control Cabinet ..... 28 lbs.
Transformer ..... 43 lbs.

Vacuum Relays mean Reliabilit

ki´lo·vac *n.* (F. *kilo*, thousand. L. *vacuus*)
1. That technology which offers reliable performance in high voltage relays resulting from operation at kilovolt levels in a vacuum dielectric.
2. *adj.*, pertaining to short contact travel, low contact mass, contacts free of oxides/pitting, and minimum contact bounce.

KILOVAC vacuum relays (ceramic or glass) are specified by design engineers for performance and reliability not available in conventional relays:

HIGH VOLTAGE ISOLATION: 2000 volts per mil of contact gap with predictable, repeatable isolation well in excess of rated values.

LOW AND STABLE CONTACT RESISTANCE: 0.015 ohms typical, with no contact oxidation or maintenance.

FAST SWITCHING TIME: 10 ms typical, due to small contact gap and short armature travel.

LONG LIFE: Millions of cycles with minimum degradation in electrical performance.

Any one of these standard features will justify your selection of KILOVAC vacuum relays. KILOVAC design and years of production experience permits immediate off-the-shelf delivery from a broad product line with voltages up to 100 KV. Special modifications provided in extremely short order.

..Reliability means KILOVAC

High vacuum technology has made high voltage switching practical with considerable savings in space and weight. KILOVAC uses the latest in vacuum pumping techniques, utilizing the "ion" type pump and achieving, in production, hard vacuums to 10^{-8} mm of mercury or better. Special manufacturing techniques include kovar-to-glass seals, final assembly in a dust and contaminant free area, specially selected glass and specially developed KILOVAC high voltage aging techniques.

KILOVAC relays are widely used in ECM, communications, sonar, radar, pulse-forming networks, medical electronics, and other high voltage equipment, or low voltage equipment where extreme reliability is a must. Many KILOVAC models are interchangeable with other manufacturers' types.

KILOVAC's broad line and "Quick Reaction Time" is geared to your most critical delivery schedule.

For complete technical information call your nearest KILOVAC sales-engineering representative or write directly to us.

KILOVAC, a company small enough to be responsive, large enough to be responsible.

2 - 3 - 4 POLE HEAVY DUTY RELAY

15-AMP CONTACTS

Rated at 15 Amps
120V 60HZ Resistive Gold Plated Silver Contacts

Th 30 relay is a heavy duty multi-purpose, multi-contact relay. Va d contact combinations and high dielectric phenolic insu- iat afford great versatility and utility. The 630 relay is widely us in such applications as industrial controls, elevator con- tro communications equipment and electronic measuring de es. Rugged, heavy duty construction and large gold plated si r contacts make this a relay to provide long trouble free lif Available for AC or DC operation.

PLUG-INS

633 SERIES

633 Series available with 8 Pin, 12 Pin, and 18 Pin Jones Plugs

634 Series available with 8 Pin, 12 Pin, and 20 Pin Octal Type Plugs

IOTICE: Special Contact Ma- erials Available. Special Coil Voltages Available.

SOLENOIDS

useful and simple, Liberty Controls solenoids are with the same thoroughness and manufactured same integrity that characterizes all Liberty Con- ducts.

y one piece U-shaped frame and the end plate are pure magnetic ingot iron — properly annealed to naximum magnetic efficiency. The dove-tailed frame and end plate are securely staked together, forming an assembly that is permanently tight and inherently efficient. Coils of top-grade magnet wire are precision wound on specially treated bobbins. For high temperature applications, special magnetic wire is used and coils are impregnated with a tough, inorganic electrical varnish. Available for either AC or DC

E 61

Size: .750″ x .813″ x 1 3/16″ Long

Mounting: 3 — #6-32 Holes

Termination: Wire Leads, Solder Terminals, .187 & .250 Quick Disconnects

PE 62

Size: 1.076″ x 1.375″ x 1.156″ Long

Mounting: 2 — #10-32 Holes on 1″ Centers

ELECTRONIC SENSORS & CONTROLS

VOLTAGE SENSORS
FREQUENCY SENSORS
PHASE SEQUENCE SENSORS
CURRENT SENSORS
POWER MONITORS
TIME DELAY RELAYS
AC SOLID STATE RELAYS
SOLID STATE FLASHERS

Logitek's comprehensive line of time-delay relays and voltage-, frequency- and phase-sensors utilize the most advanced design and manufacturing techniques for accuracy and long-term reliability — provide uncompromising performance in rigorous military, aerospace and industrial systems. All units are hermetically sealed, meet applicable requirements of MIL-I-6181D, MIL-R-5757D, MIL-R-6106C, and MIL-Std-704A. Contact ratings 2A and 10A resistive, 1A and 5A inductive, operating life 100,000 cycles minimum. MIL-Q-9858 quality control.

AC VOLTAGE SENSORS

Provide alarm, indication or disconnect signals for single — or 3 — phase lines when voltage exceeds high or low limits. Available with time delays to prevent dropout due to transients.

Input Power: 115 vac, 60/400 Hz nominal*
Sense Bands: 96 to 150 vac
Accuracy: ±1%, ±5%
Time Delays: 50 ms to 10 sec.
* Also DC operated

FREQUENCY SENSORS

Time-delayed, band frequency sensing relays, for applications where systems must be de-energized or alarms actuated when line frequency departs from normal.

Line Voltage: 100-130 vrms
Frequency Sense Range: 50/70 or 360/440 Hz*
Accuracy: ±1%
Delay: 50 ms to 10 sec*
* As specified.

PHASE SEQUENCE SENSORS

Protect rotating components and other three-phase loads from damage that could occur from phase reversals or absence of any phase. Contacts may be used to disconnect load or operate alarms.

Operating Voltage: 120/208 vac, 60/400 Hz, 3ϕ
Phase Displacement: 120 ±5 degrees max.
Permissible Distortion: total 8%, any harmonic 5%

WER MONITORS

ide me-delayed alarm or shutdown signals when volt-
freqncy or phase sequence characteristics of power
depa from specified limits.
ge: 0/280 vac, single/three phase
ge: se Band: 96-150 vrms
uen Sense Range: 50/70 or 360/440 Hz*
uracy: ±1%
un al Dropout Delay: 50 ms to 10 sec.*
ed.

OLTAGE SENSORS

e larm or disconnect signals when DC line voltage
s om normal. Insensitive to normal transients. Avail-
factory-set or adjustable bandwidth.
nd: 10-200 vdc
(including hysteresis): ±1%

IME DELAY RELAYS

n drop-out, pull-in, true delay on drop-out and con-
elay on drop-out. Timing ranges from 50 msec to
, factory-set or externally adjustable. Standard and
can sizes.
ng Voltage: 18-31 vdcs
y: 10%, 5%, 2%
bility: ±1%, any voltage and temperature
ime: 5 msec max.
tate Outputs available.

ACSOLID STATE RELAYS

Contlless relays for long life and high reliability. Normally-
ope nd normally-closed configurations with complete isola-
tion etween switching and coil terminals.
Ope ing Voltage: 12-32 vdc
Con l Signal: Ground
Sw ed Signal: 2-150 vac, 40-400 Hz
Pul Time: 100 usec max
Dro Out Time: ½ cycle max

SOLID STATE FLASHERS

Up to 10 channels; conform to MIL specs for airborne applications. Cordwood packaging for maximum density, hard mounted and encapsulated.

Input: 18-31 vdc
Load Current: up to 2.5 A
Flash Rate: up to 120 per min
Flash/Off Ratio: up to 2.4:1

GENERAL SPECIFICATIONS

ENRONMENTAL

Temperature:
Operating −55°C to +125°C
Storage −65°C to +150°C
Vibration: 10-80 cps .06" D.A. 80-2000 cps, 20 G's
Shock: 50 G's, 11 ms, any axis
Acceleration: 20 G's steady state, any axis
Altitude: 100,000 ft. hermetically sealed
Humidity: 95% R. H.
General: MIL-R-5757D, MIL-R16106C, MIL-STD-704A

PHYSICAL

Finish: Per MIL-E-5557 Blue Fed. Std. 595, Color 25177
Enclosure: Hermetically Sealed and Encapsulated
Connector: Glass to metal seal, solder hooks or pins

Magnecraft® general purpose relays

FOR IMMEDIATE DELIVERY

88 latching relay

on — 4PDT and 6PDT — 10 amps.

1 1⅝″
f two Class 88 Relays with interlocking latch-in
d on a common base.
latches when pulled in. Energizing one
ses or resets the other.
old-flashed, contacts rated 10 amps at 115 volts
resistive load.
with clearance holes for #6-32 screws.
pin armature for long life and stability of operation.
z. approx.

88.CP enclosed plug-in relays — 4 PDT 10 amp

ption.
¾ x 3⅜″
ackproof, see-through plastic dust cover.
-pin octal style plug mates with std.
P-77-20 socket.

88HP hermetically sealed relay

ation — DPDT or 3PDT — 10 amps.

1 7/32 dia.
sealed to afford maximum protection against severe
nditions.
contacts, gold-flashed, rated 10 amps at 115 volts AC or
, resistive load.
tandard 8 or 11-pin octal style plug, style socket.
z. approx.

99 heavy duty power relays, listed

ration — 25 amps 1 HP.
0, and DPDT.
— 2½ x 2½ x 2⅜″,
— 2½ x 2½ x 2⅜″,
x 2½ x 2⅜″
ver alloy, gold-flashed contacts, rated at 25 amps
C or 32 VDC, resistive load, or 1 HP. AC.
hinge-pin armature for long life and stability of
Screw type terminals and molded phenolic base.
ting: Two ⅜″ diameter clearance holes on
ers.

99/power relay with aux. contacts

eration. DPDT with SPDT Aux. contacts.

- Size: 4 3/32 x 2½ x 2⅜″
- Basic Class 99 Relay, equipped w/SPDT Auxiliary Contacts.
- DPDT power contacts rated 25 amps or 1 HP, SPDT auxiliary contacts rated 5 amps.
- Screw type terminals.

class 99D power relay

50 amps — SPST-NO-DM — 2 HP.

- Size: 2½ x 2½ x 2 3/32″
- AC or DC operation
- Oversize silver alloy, gold-flashed, contacts, rated at 50 amps at 115 VAC or 32 VDC resistive load, or 2 HP.

99S space saver power relay

— SPDT — 1 HP.

- Size: 2⅞ x 2 x 1 15/16″
- Power switching in small space.
- One #6-32 tapped mtg. hole and locating boss.
- AC or DC operation.
- Screw terminals.
- SPDT silver alloy, gold-flashed, contacts rated at 25 amps or 1 HP.

class 99SD space saver power relay

50 amps — SPST-NO-DM — 2 HP.

- Size: 2½ x 2 x 1 15/16″
- 50 amp switching in small space.
- Screw terminals.
- One #6-32 tapped mtg. hole and locating boss.
- AC or DC operation.

ance Values ±10% at 25°C.
e Specified Relays pull in at 80% of nominal or less for DC
and 85% of nominal or less for AC relays at 25°C.

Magnecraft® telephone type relays

IN STOCK FOR IMMEDIATE DELIVERY

class 33

Sub-miniature 1 1/16 x 1 1/4 x 1 1/4"

- DPDT — 4PDT, 3 amp contacts.
- Hinge pin assures long life.
- Telephone type switching versatility.
- Fast operate and release time.
- Rigid mount — Four 4-40 mtg. holes.
- Weight: 1 oz.

class 33HS

Miniature Hermetically Sealed
Hermetically Sealed to Afford Maximum Protection Against Severe Ambient Conditions.

- Size: 3 1/32 x 1 11/32 x 1 41/64"
- DPDT — 4PDT 5 amp contacts.
- Telephone versatility and reliability.
- High resistance to shock and vibration.
- Widely used in military and civilian equipment.
- #4-40 3 stud mtg. — 8 or 14 pin solder terminal header.
- Weight: 3 oz.

NANOSWITCH™

The First real solid state 2 PDT Relay in small packge

*PAT. PENDING.

INTRODUCTION:

Here is the first true solid-state 2 PDT relay, incorporating nver tional semiconductor devices in a hybrid, micro-electronic ssem bly. A major feature of the NANOSWITCH* is that the n mall closed contacts do not require secondary biasing, excitatio f th driver circuit, nor external circuits for functioning.

There are no exotic semiconductors or magnetic type com nent used. NANOSWITCH can be used as a direct replacemen f a electro-mechanical relay, within the limits specified.

The NANOSWITCH offers the user high speed response pre ous not available in a relay. Other desirable features include no ntac bounce or coil inductance. The homogeneous construction mit usage in high vibration and shock environments. Each relay hig impedance driver circuit will respond to any voltage input b wee 4 and 50 VDC.

Switching features include almost infinite life, regardless load type. Reliability of the NANOSWITCH parallels other soli state components.

FEATURES:

Life	> 1 Billion at full rated load
Isolation Resistance	> 10,000 megohms at 25°C (between all applicable terminals)
Temperature Range	−55 to +125°C
Duty Cycle	Continuous
Vibration	30G, 50 to 5000 Cycles
Shock	300 G
Sealing	Hermetic
Enclosure Type	TO-5, TO-116, ¼ Xtal Can
Withstanding Voltage, All Terminals to Case	500 VDC
TO-5 and TO-116:	
Operate Speed MAX.	5 Microsec.
Release Speed MAX.	5 Microsec.
¼ Crystal Can:	
Operate Speed MAX.	10 Microsec.
Release Speed MAX.	10 Microsec.
Contact Arrangement	2 PDT
Contact Off Resistance	> 10,000 megohms at 25°C
Max. Contact Rating	TO-5 & TO-116 = .250 A at 32 V Xtal Can = 1.0 A at 32 V
Contact V. Range	4 to 32 DC. See Note 1
Contact V. Drop	See Figure 2 (Characteristics are typical of switching transistors)
Contact Load Type	Resistive, Lamp, Inductive (250 mh max.)
Driver Circuit Resistance	See Figure 3
Driver Circuit V. Range	4.0 to 50 VDC. See Note 2
Pickup MAX.	4.0 VDC
Dropout MIN.	1.0 VDC
Dead Band	3.0 VDC

NOTE 1: AC Voltages can be switched if the zero base V. reference is offset with B+ DC. (Request Nanotron Technical Bulletin #101.)

NOTE 2: An individual relay will respond to any driver voltage between 4 and 50 DC. If AC drive used, relay will follow cycle rate. Contact pulse width will be a function of applied AC drive amplitude for a given frequency.

Application Connect in circuit as shown in Fig. 1

V_L and V_D = Load and Driver voltage inputs
R_L = External loads to be switched

HMITE has the answer in general purpose, latching and solid state relays

ENERAL PURPOSE RELAYS — Includes Indicator, Plate, Thyratron & Latching Versions in Unenclosed & Enclosed Types

Unenclosed (GPR) 3PDT

NEEDS CHASSIS CUTOUT 1-15/32" SQ.
Enclosed Thru-Chassis (GPRTT)

Enclosed for socket mtg. (GPRTS)

Enclosed Plug-Base (GPRTP)
1 & 2 pole A = 2⅞", Octal Plug
3 pole A = 2⅝", 11-Pin Plug

6PDT Latching Relay (GPRLE)

gged, low cost relays handling power for small size. Uncompli- gn provides unusual flexibility for changing connections and mounting. Stock includes relays in versatile , some with indicator light, also plate, thyratron and latching versions. mercial and industrial use where economy and versatility are important. **BASIC d) RELAY:** All connections terminate on barrier-type terminal panel on com- older—quick-connect (push-on) lugs which accept AMP 110 female connectors.

RELAYS (GPRTA-, GPRTT-, GPRTS-, GPRTP-). Four types of clear plastic as follows:

TA" — ("Terminals-Above-Chassis" type).
TT" — ("Terminals-Through-Chassis"type).
TS" — type ("Terminals for Socket Use") for plug-in mounting in Ohmite ocket "SOGPR".
TP" — ("Plug Base" type).

Contact Ratings: Two ratings — fine silver contacts, 5 amps at 115 VAC or 32 VDC; silver-cadmium contacts, 10 amps.

Insulation: Tested at 1500 VAC.

Coil Wattage: 1.4 watts DC operation;; 1.6 watts (2.0 volt-amps) AC except 2.4 watts (3.70 volt-amps) for 4-pole AC and AC latching relays.

Latching Relay: Consists of two GPR relays with armatures linked so that the n.o. contacts of one are mechanically latched in closed position when, and after, this relay is energized. When 2nd relay is energized, first relay restores and latches 2nd. Permits switching of twice the number of circuits and holding without coil current. Unenclosed type "GPRLE". Enclosed type "GPRLETP" in clear plastic case with Jones plug P-324-SB fitting S-324-AB socket.

ERIES ALL PURPOSE RELAYS

DO RELAY AC or DC OPERATION

Ideal for mobile equipment applications where severe shock and vibration are encountered. Coil drain: 3-watts DC, 6 watts 60 cycle AC. Contact ratings: 10 amps. at 115 v. AC; 32 volt DC resistive load. Insulation tested at 1500 v. AC. Size, (4 pole) 2¼ x 2 1/16 x 1 13/16"; (3 pole) 2¼ x 1⅝ x 1 13/16".

MODEL DOS PLUG-IN & ENCL. TYPES

Model DOS, DPDT relay with standard octal plug base, unenclosed or enclosed types. Enclosed dust-proof type has drawn aluminum cover. Overall dimensions, exclusive of plug: DOSPX-1T — 1⅝ x 2 x 1 15/16"; DOSEPX-5T — 2⅛ x 2½ x 2⅛". Contacts — 15 amps.

DOSPX-1T

DOSEPX-5T

MODEL DOS RELAY
AC or DC OPERATION

Quality, general-purpose relays originally designed to meet rigorous aircraft specs. Extremely compact yet rugged. Coil drain: 2.5 watts DC, 3 watts at 60 cycles AC. ontact ratings: DP, 15 amps. at 115 v. AC or 32 v. DC resistive load; SP, 25 amps. Molded phenolic insulation; tested at 1500 v. AC. 1⅞ x 1⅝ x 1 13/32".

cally Sealed non-removable enclosures, filled y nitrogen, are also available to provide pro- under adverse ambient conditions. DOS relays 5 volt AC or DC coils are provided in these res with either octal plug (DOSHPX-) or solder- (DOSHX-) connectors as illustarted. **Weights:** ach approx.

MODEL DOSY RELAY
FOR PLATE CIRCUIT OPERATION

The high operating sensitivity makes the DOSY relay adaptable to a wide range of electronic control circuits, such as plate circuit controls,—etc. The insulation is of high grade, molded phenolic material. At 115 v. AC or 32 v. DC, resistive load. Model DOSY relay has a contact rating of 15 amperes.

There are two DPDT types, one having 10,000 ohms coil resistance (maximum pull-in current of 8 ma. DC); the other having 5,000 ohms coil resistance. Dimensions are same as for Model DOS next column.

DO RELAYS IN HERMETIC ENCLOSURES

DOHPX-16T, 3PDT, 11 Prongs
DOHPX-15T, 4PDT, 20 Prongs

DOHX-22T, 3PDT 14 Terminals
DOHX-23T, 4PDT 14 Terminals

Stock DO relays with 115 volt coil in hermetically sealed metal enclosures, filled with dry nitrogen. Both 3 and 4-pole DO relays are supplied in these enclosures with plug (DOHPX-) or solder terminal (DOHX-) connectors as illustrated. **Weights:** 3-pole hermetic relay approx. 14 oz.; 4-pole approx. 15 oz.

CHING RELAYS

NEW

Magnetic Latching Relay

ew Series GPRM tic latching relays o mechanical latch- ers. Unlike conven- latching arrange- , magnetic latching do not have criti- ever adjustments limit mechanical life and are less susceptible to shock ibration.

Small Size
Long Life
Reliability
Positive Action
Low Power Consumption
Economical Price

MODEL DO LATCHING RELAY (DOLEX)

DOLEX-3T, 3PDT
DOLEX-5T, 4PDT

Consists of Model DO relay and a "reset magnet" with both armatures mechanically latched so that the normally open contacts of the relay remain closed when the relay energizing voltage is removed. The relay releases to normal position when the reset coil is pulsed. Permits "holding" of circuits without continuous coil current. Coils of stock units (both relays and reset coils) are 115VAC. Available with 3 or 4-pole relays. **Weights:** 3-pole — 16.5 oz.; 4-pole — 17 oz.

MODEL DOS LATCHING RELAY (DOSLEX-1T)

DOSLEX-1T

Consists of Model DOS relay and a "reset magnet" with both armatures mechanically latched so that the normally open contacts of the relay remain closed when the relay energizing voltage is removed. The relay releases to normal position when the reset coil is pulsed. Permits "holding" of circuits without continuous coil current. Coils of stock units (both relay and reset magnet) are 115VAC. **Weight:** 14.2 oz.

ID STATE TIME DELAY RELAYS

INTERNAL OR EXTERNAL RELAY

Ohmite Time Delay Relays consist of a solid state timing network and an electromechanical relay which is energized by the timing network. For the "Delay on Operate" type of relay, the electro-mechanical relay can be supplied in the same enclosure as the timing network or can be external to it. The internal electro-mechanical relay has DPDT contacts rated at 10 amperes. Where an external relay is required, Ohmite GPR, DOS or DO relays can be used.

DELAY AND DELAY ADJUSTMENTS

Variable — The Variable Ohmite Time Delay Relay offers three variable ranges:

0.1 to 10 seconds
0.6 to 60 seconds
1.8 to 180 seconds

Fixed Maximum and Remote — Is supplied with a factory set time delay. However, incorporates provisions for connecting an external resistor to reduce time delay from the max. A variable resistance may be used to adjust the delay from nearly the max. to the min.

Operating Voltage Ratings:
AC: 24, 115 **DC: 24, 48, 110**

Contacts and Rating of Internal Relay: DPDT, 10 amperes at 115 VA, 32VDC resistive.

MODEL SSA SOLID STATE RELAYS *NEW*

- **No Moving Parts — No Contact Bounce or Wear**
- **Extraordinary Life, Reliability, Sensitivity, Speed**
- **Universal "Coil"**
- **Switches up to 10 amps at 40°C (on metal panel)**
- **Transient Protected — No False Actuation**

Model SSA relays are completely solid state. No moving parts and are not subject to the difficulties as with electro-mechanical relays. Excellent performance under severe shock and vibration.

Provide the ultimate in reliability, long life and trouble free service. They can replace electromechanical relays in critical applications where exceptional life and reliability are paramount or where reduction of maintenance is desired.

The Model SSA relay, a completely solid state device, is a true relay in the functional sense since its input ("coil") is completely isolated from its switching ("contact") elements. In the case of two-pole relays, one pole is isolated from the other.

WIDE RANGE CAPABILITY
Universal "Coil" Input, High Sensitivity
Universal "Coil" Input: Broad capability due to the universal input. Accepts a wide range of both AC and DC voltages to high frequencies:
AC — 3 to 140 volts, (to 25,000 cps) and
DC — 3 to 200 volts
High Sensitivity: Model SSA relays will operate on as little as 6 milliwatts. Capable of operating directly from integrated circuits (IC's) and serve as ideal interface between linear or digital systems and power circuits.

PRINCETON, INDIANA 47570 / AREA CODE 812/385-5251

GENERAL PURPOSE RELAYS (CONTINUED)

KL SERIES Multiple contact relay. Varied contact combinations and high dielectric phenolic insulation affords extreme versatility and utility. Widely used in such applications as industrial controls, elevator controls, communications equipment and electronic measuring devices. Mounting: All models — Two No. 6-32 tapped holes on 1 7/16″ centers. Contacts: 1/8″ dia. gold-flashed silver. Weight: 5 ozs.

KHU/KHP/KHS SERIES Small, rugged, 4PDT, available for AC or DC operation. Only KHU relays carry Underwriters' Laboratories component recognition. KHU and KHP have nylon dust covers; KHS is hermetically sealed in metal enclosure. These relays are designed to meet the exacting requirements of data processing, computer and process control applications. Contacts are 3/32″ gold-flashed silver and are rated 3 amps @ 30V DC or 120V AC resistive for 100,000 operations. "12" suffix indicates silver-cadmium-oxide contacts. Mounting: Solder terminals with a No. 3-48 5/16″ long. Adaptable to sockets (below) with printed circuit or solder lug terminals. Weights without sockets; KHU or KHP 1 1/8 ozs. KHS 1 5/8 ozs.

KHU/KHP hold down spring (similar to KCP-KRP, above).

9KH3 50 per box, weight 3 ozs. **NET $5.50**

9KH1 Solder terminal sockets and retainers.
Box of 10 **NET $6.60**

9KH2 Printed circuit terminal sockets.
Box of 10 **NET $6.60**

Weight per box: 4 ozs.

KRP SERIES Versatile, multi-contact arrangement. Enclosed in a clear high impact plastic dust cover. Standard 8-pin octal-type plug for KRP5 and KRP11, 11-pin for KRP-14. Weight: Approx. 3 ozs. Contacts: 5 amp, 3/16″ dia. gold-flashed silver, 10 amp 3/16″ dia. silver cadmium-oxide. See KCP-KRP hold down spring for special mounting applications. See KRP-N indicator lamp relay for current monitoring applications.

KRP-N INDICATOR LAMP RELAY A general purpose relay incorporating a lamp to indicate current or voltage availability in power circuit. Contacts: 3/16″ dia. silver cadmium-oxide. Enclosure: Clear, high impact plastic dust cover. Mounting: Standard octal plug. Weight: Approx. 3 ozs.
Hold down spring (Please see page).

"P" — CASE A clear high impact plastic case for mounting rectifiers, capacitors, resistors or a combination of these. Available with octal-type plug with 8 or 11-pins. Comes complete with four screws. Weight: .5 ozs. each. See KCP-KRP Hold Down Spring for special mounting applications.

35D070 Case (8-pin plug) **NET $ .65**

35D072 Case (11-pin plug) **NET $ .80**

R40 SERIES SLIMLINE DC operated 4PDT relays are designed for printed circuit board use. Provide low profile — only .43″ thick. Allows easy PC board layout and .6″ board mounting centers. Switching range is from true dry circuit to 5 amperes in a variety of contact styles. A wide range of coil voltages offered. Pull-in power: 400 mw.

9XR40-1 Right angle sockets with printed circuit pin terminals for R40 Slimline relays, retainers included.
Box of 10 **NET $13.50**

9XR40-2 Vertical socket with printed circuit pin terminals for R40 Slimline relays, retainers included.
Box of 10 **NET $9.50**

9XR40-3 Chassis mount socket with solder terminals for R40 Slimline relays, retainers and mounting clip included.
Box of 10 **NET $10.00**

Dimensions same as KHP

ENERAL PURPOSE RELAYS (CONTINUED)

SERI This reliable 10-ampere relay for indus- cont is available with a socket that is also d 10 peres. The .187" terminals of the relay of t quick-connect/solder type. Sockets are ed rately and their terminals are of the ced ler type. The KUP is enclosed in a clear, n imp plastic dust cover. Silver-cadmium-oxide acts sure long contact life. Operation: Con- ous.

KUP5

P SERI With slotted flange for direct-to-chassis unting dentical in both electrical and mechani- spec ations as the KUP described above, ex- th ney are not suitable for socket mounting. .187 terminals are of the quick-connect/solder . Sl width: .156". Weight: 3 ozs.

mode carry U/L Component Recognition.

KUP Pced solder terminals sockets for KUP in ca relays. Rated 10 amperes; molded nylon. unti hole .165" dia.

NET $3.95

KUP5 Skets with .187" quick-connect terminals. unti hole .165" dia.

NET $6.30

KUP2 Inted circuit pin terminal sockets for KUP ays. ll accept .187" terminals of KUP in plain . Mled nylon. Mounting hole .165" dia.

NET $4.75

X = .950 (2PDT)
1.165 (4PDT)
1.375 (6PDT)

R10-E1 RIES DC operated industrial relays provide sitiv of 125 mw per pole. DPDT to 6PDT con- ct ar gements are available with three contact yles .100 mA 2 amps or 5 amps. Operating mper re is −55°C to +72°C. U/L File No. 2810. older terminals, No. 3-48 stud or plug-in ket re available for relay mounting (see sockets low). Wire retainer and pre-installed grounding rovisi included with sockets. R10-E1-Z SERIES s bi ated low level contacts. "J" Sensitive Cur- nt A stment: 85 mw (DPDT); 175 mw (4PDT).

2 POLE
4 POLE

R10- Solder terminal sockets and retainers for PDT) relays.

NET $5.50

6 POLE

R10- Solder terminal sockets and retainers for PDT) relays.

NET $7.00

R10- Solder terminal sockets and retainers for PDT 0 relays.

NET $9.00

POWER RELAYS

AB SERIES For appliance and general purpose applications where rugged construction, long life and quiet operation are required. All equipped with terminals to fit snap-on connectors and may also be applied to printed circuits using dip soldering. Snap-on screw adaptors packed with each relay. All AC models carry U/L component recognition (File No. E29244) and CSA* listing. Mounting: Two No. 8-32 tapped holes, on 1¼" centers. Silver contacts. Weight: Approx. 5 ozs.

ABC SERIES Medium duty power relay with dust cover. For small motors, industrial control and similar applications. All equipped with terminals to fit snap-on connectors and may also be applied to printed circuits using dip soldering. Snap-on screw adaptors packed with each relay. All AC models carry U/L component recognition (File No. E292-44) and CSA* listing. Mounting: One No. 8-32 threaded stud ⅜" long and locating tab on 9/16" centers. Contacts: ¼" dia. silver. Weight: Approx. 7 ozs.

GF SERIES Medium duty power relay for industrial control applications. Long contact arms have ¼" dia. silver contacts rated at 10 amps at 120V AC or 28V DC resistive. Contacts have excellent wipe or self-cleaning action. Tinned, pierced solder terminals. Mounting: 8-32 tapped core with locating boss. Weight: 4.75 ozs. (See GA series, page 1, for similar voltage actuated relays.)

MR SERIES A medium duty power relay that can handle small motors, transmitters, and general purpose applications. Mounting: Two 5/32" dia. holes on 2¼" centers for MR3 and 11, 2⅝" centers for MR2, 5 and 14. Contacts: 7/32" dia. silver. Weight: 4 ozs.

MS/MR Metal dust cover similar to PM/PR shown below. 3⅝" x 2⅜" x 2 19/32". Weight: 7.5 ozs.

35D130 fits MS/MR **NET $2.20**

PM SERIES A compact heavy duty 4PDT power relay for polyphase and heavy duty switching applications. Screw terminals. Has ¼" silver-cadmium-oxide contacts rated at 25 amps at 120V., 25 amps at 240V. 50/60 Hz resistive AC, 1HP per movable arm at 120V. or 240V. AC single phase, U/L (File No. E22575) and CSA* listed, except 480V. Mounts by one front keyhole and two rear channel slots for 8-32 screws on 2" x 2½" triangular centers. Weight: 14 ozs.

9PM1 Adaptor plates for mounting PM on PR mounting holes. Box of 10 **NET $1.75**

Enclosures for PM relay — see below.

PR SERIES Heavy duty relay for industrial control applications requiring long life and fast action. Heavy duty screw type terminals. All AC and DC models except PR-11AL5 carry U/L (File No. E22575) and CSA* listing. Mounting: Two 3/16" dia. holes on 1⅞" centers. Weight: 11 ozs. max. Contacts: 5/16" dia. silver. Enclosure: See "PR" cover. The PR11AL5 relay is equipped with 3/16" dia. silver SPDT auxiliary contacts rated at 5 amps.

PM and PR DUST COVERS These dust covers have a sheet metal base with knockouts for ½" dia. conduit and an aluminum cover fitted with two screws. Finished in gray hammertone. Mounting: Three No. 10 holes on 1⅞" x 4⅛" centers. Approx. weight: 1 lb.

35D227 Metal cover for PM only **NET $3.45**

9PM2 Plastic dust cover for PM only. Box of 4 **NET $1.90**

35D013 Metal cover for PR only **NET $3.45**

AMF | POTTER & BRUMFIELD

PRINCETON, INDIANA 47570 / AREA CODE 812/385-5251

SPECIAL PURPOSE RELAYS

BUZZER AC operated coil with a spring steel armature which buzzes when coil is energized. Used extensively in test equipment, laboratories and a list of other applications where a small lightweight, pendant buzzer is required. Weight: 1⅝ ozs. Mounting: No. 6-32 tapped core.

SERIES Unusually versatile switching makes this pulse sequencing relay especially suitable for single or latching. The 2 Form C contact arrangement is switched alternately by cam action during on-off of the armature. It can also be furnished with optional 2 Form C auxiliary contacts (designated by "L"). AC version operates on a 50% coil duty cycle (5 Min. max.). Mounting: 8-32 tapped core mounting boss. Weights: With aux. contacts 4¾ ozs. Without aux. contacts 4 ozs.

GM1N10 and GM1N12 AC or DC use the basic structure with uni-directional printed circuit board with 10 or 12-steps, respectively. The board attached to an extension of the ratchet shaft. Movable contact arm advances one position each time the armature **drops out.** Contact rating: 5 amp. Contact arrangement: SP-10 pos. and SP-12 pos. Size: 2.312" x 1.875" x 2".

KB SERIES LATCHING RELAY Both release and trip coils must be for the same voltage. One coil operates only to set latch and other coil releases it. Ideal for memory work and overload applications. Operates on momentary impulse to either coil. Mounting: Two 5/32" dia. holes on 1⅜" centers. Weight: 5 ozs. Contacts: ⅛" dia. silver rated 5 amps; "" suffix indicates silver-cadmium-oxide contacts movables rated 10 amps. AC relays with 5 amp contacts carry U/L component recognition (File No. 29244) and are CSA* listed. AC coil for intermittent duty only.

KBP SERIES LATCHING RELAY Enclosed in a translucent polypropylene dust cover, the KBP is furnished with 8 pin octal type plugs for socket mounting. Contact arrangements of 4PDT and 5PDT are available. Otherwise all specifications are identical to the KB series described above. U/L component recognition does not apply to the KBP series. Weight: 8 ozs.

KUL SERIES Small, magnetic latching relay requiring approximately half the space needed for mechanical latching relays. Designed for continuous duty in applications demanding good memory stability, the KUL is ideal for machine tools, process controls and vending machines. SPDT or DPDT silver-cadmium contacts are rated 10 amps @ 28V DC, resistive or 120V AC, 80% PF. All AC DPDT relays include diodes inside the clear polycarbonate dust cover. Mounting: Various 10 amp rated nylon sockets available (see KU sockets page). Weight: 3.4 ozs. KUL hold down springs.

Box of 25 **NET $4.50**

PLATE CIRCUIT AND SENSITIVE RELAYS

KCP SERIES Low cost plate circuit relay enclosed in a high impact plastic cover. Sensitivity 125 mw single pole; 250 mw double pole; 375 mw three pole. Mounting: Standard octal plug-in type. Eight pin KCP5 and KCP11. Eleven pin for KCP14. Contacts ⅛" dia. gold-flashed silver. Weight: Approximately 3 ozs. Use KCP-KRP hold down spring when vibration is a factor or when using inverted or horizontal mounting.

Underwriters Standards Assoc. File No. LR-15734

PLATE CIRCUIT RELAYS (CONTINUED)

LM SERIES (See KL page 2 for similar voltage actuated relays.) Sensitivity: 100 milliwatts for single pole and 200 milliwatts for double pole. Medium cost, high quality relay with 7/32" dia. gold-flashed silver contacts. Pick-up adjustable by tail spring adjusting screw. Mounting: Two No. 6-32 tapped holes on 1 13/16" centers. Weight: Approximately 5 ozs. DC Coils only.

PW SERIES (In both voltage and current actuated models.) Sensitivity: 40 mw for current actuated models, 180 mw for voltage actuated models. Precision, light weight, hermetically sealed relay for aircraft and missile applications. Will withstand 10g vibration to 500 Hz. Mounting: Standard 7-pin miniature tube base. Weight: Approx. 1 oz.

RS SERIES (In both voltage and current actuated models.) 60 mw. sensitivity. Low-cost, small, light weight, sensitive relay for radio-sonde, light dimmer and model applications. Mounting: Two No. 4-40 tapped holes on diagonal 3/4" x 5/8" centers. Contacts: Bar palladium. Weight: 1½ ozs.

TELEPHONE TYPE RELAYS

LS SERIES Short springs and light weight armature provide fast action without sacrificing reliability and long life. Stainless steel hinge bearing designed to give 100 million operations. Tinned, pierced solder terminals. Mounting: Two No. 6-32 tapped holes on 3/4" centers. Bifurcated contact arms with 1/16" dia. twin palladium contacts. Weight: Approximately 4 ozs.

The LSP version has identical specifications as the LS, except that it is enclosed in a high impact, clear plastic cover and is provided with a rectangular socket with combination taper tab or solder terminations. Enables plug-in like any other plug-in component. Two sizes of sockets and covers are available: 16-pin for 4 Form C (4PDT) or 28-pin for 6 Form C (6PDT). Dimensions: LSP17D: 1.71" x 1.39" x 2.52" seated; weight: 4 ozs. LSP23D: 2.11"x1.39"x2.52" seated; weight: 4½ ozs.

MH SERIES MINIATURE TYPE Ideal for applications where space and weight are factors. Mounting: Open model, MH11L, one No. 6-32 threaded stud 1 7/32" long plus locating boss. All other open models have four No. 3-48 holes on 3/8" x 3/8" centers. Sealed models, M enclosures, three 6-32 NC 2 threaded studs on 1¼" x ½" centers. D enclosures, three 6-32 threaded studs on 1 3/16" x 1 5/16" centers. All sealed models have hook end solder terminals. All models have 1/4" dia. gold-flashed silver contacts. Weight: Open models 2½ oz. max. Sealed models 5 ozs. max.

ML SERIES A small telephone type relay having excellent sensitivity and outstanding switching capabilities. Ideal for transistorized computer networks, telephone systems and battery powered communications equipment. Single contact arms have 1/8" dia. gold-flashed silver contacts rated at 3 amps for 100,000 operations. Pierced solder terminals. Mounting: Four 3-48 holes on 3/8" centers. Weight: 2.5 ozs.

HIGH PERFORMANCE RELAYS

FC SERIES Conventional micro-miniature relay lies flat on printed circuit board. Withstands 150g shock, 400g linear acceleration, 30g vibration to 2000 Hz. Ambient temperature range: —65° to +125°C. Hermetically welded. Bifurcated contacts. Plugs in on .2" grid. Meets applicable sections of MIL-R-5757D, and MSFC-SPEC-339. Weight: .75 oz.

FL SERIES Dual-coil latching relay has same specs as above, except operates by pulsing each coil alternately (observing coil polarity); or connecting the coils in series from a reversing (polarized) source. Remains latched without coil power.

HC SERIES A micro-miniature, non-polarized, non-latching half-size crystal case relay for high reliability performance. Its high-torque motor structure and bifurcated, gold-plated silver DPDT contacts, rated dry circuit to 2 amps @ 28V DC resistive, provide positive performance in low level applications. Temperature range: —65°C to +125°C. Hermetically welded. HC11D has plug-in, plain case; HC11DA has hook-end solder terminals and shoulder brackets; HC11DB has hook-end solder terminals and flat mounting plate with 2 holes. The HC series meets or exceeds all applicable sections of MIL-R-5757D/9, and complies with MSFC-SPEC-339. Size: Plain case .8" x .4" x .4" (seated). Weight: ¼ oz.

HIGH PERFORMANCE RELAYS (CONTINUED)

M SERIES Military version of miniature HC relay. Hermetically sealed construction features. Hermetically sealed and vibration tested for use in demanding applications such as aircraft and ground support equipment. Meets or exceeds appropriate sections MIL-R-5757E. Straight pins or hook solder terminals. Solder bracket available. HCM has same mounting as HC Series on previous page. Weight: oz.

SC SERIES Micro-miniature permanent magnet relay for low power, high shock/vibration applications. 30g shock, 30g vibration to 2000 Hz with no contact chatter. Ambient temperature range: −65°C to +125°C. Features single coil action and contacts of standard micro-miniature coil operation. Polarized connections because of magnetic polarity. Positive terminal marked with red dot. Mounting: SC11D**, —DA, —DB, DC and DD correspond to similarly designed SL mountings. SCG11D has rectangular header with terminals on .2" grid. Weight: oz.

Accessories: No. HRK-1, 8-pin receptacles available from distributors for plug-in applications.

SL SERIES Dual coil micro-miniature magnetic latching relay with same shock/vibration, resistance and ambient temperature range as SC. Coils may be connected in series for polar operation. Mounting: SL11D for plug-in applications: —DA has shoulder bushings with two .104" x .136" holes on a 1.062" center; —DB has a welded bracket with four .125" holes on 1.062" x .281" centers; —DC has two No. 4-40 NC 2A threaded studs on .488" x .220" centers; —DD has plain case with hook and solder terminals. SLG11D has plug-in terminals on .2" grid.

Accessories: No. HRKB-1, 10-pin receptacles available from distributor for plug-in applications.

VOLTAGE SENSORS

VS SERIES Two types of accurate, low cost solid state voltage sensors are available. First, an adjustable pick-up and drop-out series for 24V DC and 120V AC voltage sources. Second, a series with fixed pick-up and adjustable drop-out, also for 24V DC and 120V AC voltage sources. All are provided with standard octal plugs for socket mounting and are enclosed in a nylon dust cover. Please see details for ranges of voltage adjustments.

Fixed pick-up and adjustable drop-out. One knob for setting drop-out value.

Adjustable pick-up and drop-out. Two knobs for setting desired values.

SPECIFICATIONS

Quiescent Current Drain: Maximum of 3 ma.
Maximum Current Drain: After sensing: 30 ma.
Accuracy of Set Point: 1% after initial setting.
Reverse Polarity Protection: Yes, on DC types.
Operating Temperature: −40°C to +55°C.
Switching Relay Contacts: 2 Form C (DPDT). Rating: 3 amps 28V DC resistive; 120V AC resistive.
Expected Life:
Mechanical: 10 million operations.
Electrical: 100,000 operations minimum @ rated load.

DRY REED RELAYS

JR (STANDARD) SERIES
JRA LOW COST SERIES

TWO TYPES OF CAPSULES The JRA Series is available only in a Form A (SPST-NO) contact arrangement. Both JR and JRM relays have reed switches with either Form A (SPST-NO) or Form C (SPDT) contact configuration. Biasing with a permanent magnet changes Form A to a Form B (SPST-NC). This arrangement requires that coil polarity be observed. Combining one Form A with one Form B results in a single Form C (SPDT) break-before-make. A "true" Form C (SPDT) uses a reed switch with two stationary and one movable contact. The movable contact is normally closed until the coil is energized.

JRM (MINIATURE) SERIES Fast response, reliable performance, high sensitivity, and long life make JR standard and JRM miniature series relays especially suited for data processing applications, computer equipment, logic circuitry and various other sophisticated control circuits.

JDT DUAL THIN-LINE The low profile (only 0.275" max. height) JDT Dual Thin-Line reed relays are ideal for high density packaging applications. Hermetically sealed glass capsules are epoxy encapsulated in 4 pole (4100 Series) or 8 pole (8100 Series) configurations. Dual in-line terminals on .100" centers for p.c. board mounting are featured. Operate time is 3.5 milliseconds including bounce. Release time is 3.5 milliseconds maximum. Weight: JDT 4100, ½ oz.; JDT 8100, ¾ oz.

TWO TYPES OF BASIC CAPSULES Both JR and JRM relays employ dry reed glass capsules with two basic types of contact arrangements, Form A (SPST-NO) or Form C (SPDT). Biasing with a permanent magnet changes Form A to a Form B (SPST-NC). This arrangement requires that coil polarity be observed. It uses a two-cavity bobbin. Combining one Form A with one Form B results in a single Form C (SPDT) break-before-make; this uses a three-cavity bobbin. A "true" Form C (SPDT) uses a reed switch with two stationary and one movable contact. The movable contact is normally closed until the coil is energized, causing a "true" Form C (SPDT) break-before-make; it uses a single-cavity bobbin.

MERCURY-WETTED CONTACT RELAYS

SERIES are long life, high speed, and unvarying dependability — are the result of the basic component of these relays: a hermetically sealed glass capsule. It contains the contact arrangement and small reservoir of mercury sealed in a high pressure hydrogen atmosphere. A film of mercury is renewed for every operation — that's you can think in terms of billions of operations without contact pice, pitting or welds.

TYPES OF CAPSULES The capsules used in JMF and JMF2 (with capsules) modules and JML relays has a SPDT, break-before-make (Form C), non-bridging contact arrangement. Each capsule used in JMP, JMS and JM4 relays has a SPDT, make-before-break (Form D), bridging contact arrangement. JMF, JMF2, JML and JMP series achieve a high sensitivity by factory-adjusted magnet biasing.

MOUNTING POSITION: Upright mounting required, but deviation from upright up to 30° causes only minor deviation in operating characteristics.

CONTACT RATINGS

JMF and JML: 500V max., and 2 amps max., 100 VA max.*

JMS and JM4: 500V max., and 5 amps max., 250 VA max.

Contact protection unless in a low level circuit. Details of a suppression circuit consisting of resistor and capacitor in series packed with each relay.

PRINCETON, INDIANA 47570 / AREA CODE 812/385-5251

SOLID STATE TIME DELAY RELAYS

A wide selection of three separate series of solid state time delay controls are represented by Potter & Brumfield time delay relays, the CD series, the CH series, and the CU series. The differences between the three types consist in their degree of accuracy, the variety available in each series, and their cost.

BASIC TIMING CIRCUIT The basic timing circuit of all three series consists of a resistor in series with a capacitor. When the input voltage is applied to the resistor-capacitor circuit, the voltage across the capacitor slowly increases. When the firing level is reached a solid state trigger circuit acts to turn on a solid state output switch that energizes a switching relay or external electrical load. The solid state design eliminates cams, clutches and motors. Using no moving parts, the timing circuit can have no mechanical wear, an advantage that is especially desirable when accurate recycling is required.

CU SERIES An outstanding value in a solid state time delay relay at low cost, the CU series is designed for delay on operate applications in machine tool controls, copiers, office equipment, coin-operated machines, process controls and many others. It is available in two types: Fixed time delay that is set at the factory and cannot be modified. Second, adjustable with an external resistor. For minimum time two terminals, 2 and 5, must be shorted; for maximum time the listed external resistor between terminals 2 and 5 must be added. For intermediate times select a lesser value resistor, or a potentiometer. Either model can be furnished in two types of enclosures with the relay in the same enclosure as the solid state unit. The CU series is offered with delay on operate only.

CUA and CUC are fixed time delays. **CUF and CUH** are resistor adjustable delays. All with internal DPDT 10 amp contact relay.

CUA 41-70010	**CUF 41-70010**
CUA 41-70120	**CUF 41-70120**
CUC 41-30010	**CUH 41-30010**
CUC 41-30120	**CUH 41-30120**
CUA 41-30010	**CUF 41-30010**
CUA 42-70010	**CUF 42-70010**
CUA 42-70120	**CUF 42-70120**
CUC 42-30010	**CUH 42-30010**
CUC 42-30120	**CUH 42-30120**
CUA 42-30010	**CUF 42-30010**

CU-41 is a plain case relay, **CU-42** has a slotted flange case. Diagram A is for fixed delays, diagram B for resistor adjustable delays.

CH SERIES The CH series is intended for a wide range of industrial applications where economy is of greater interest than highly critical performance. It is available in two types: Knob-adjustable with the relay in the same enclosure as the solid state unit. The second type has a fixed time delay period that is set at the factory and cannot be modified; its case has no knob. The CH series is available for time delay on operate and on release.

CH-38 and CD-38. Knob-adjustable delay "on operate" wtih internally mounted DP-DT relay. Contacts rated to 10 amps. Diagram A.

CHA-38-70001	**CHD-38-30003**
CHB-38-30001	**CDB-38-70003**
CHB-38-30003	**CDB-38-70004**
CHB-38-70001	**CDB-38-70005**
CHB-38-70003	**CDD-38-30003**
CHB-38-80001	**CDD-38-30004**
CHD-38-30001	**CDD-38-30005**

Delay "on release" CH requires auxiliary SPDT switch or relay contacts: CBH-38-70011, CHB-38-70013, CHD-38-30011, CHD-38-30013: Diagram B. CD "release" occurs when "Control" circuit is de-energized; supply circuit must be on continuously:

CDB-38-70012, CDD-38-30012: Diagram C.

*External resistor (not furnished) for maximum time.

CD SERIES Remarkably dependable, accurate and flexible, the CD series offers an unusually wide selection of operational configurations, all with accurate time delay values, fast reset time and excellent repeatability. It is available in two types: Knob-adjustable in two versions, one with the relay in the same enclosure as the solid state unit, the other with an auxiliary relay. A second type is adjustable with an external resistor. The CD series is available for time delay on operate or on release.

CD-21. Knob-adjustable. Use with P&B KRP relays (see page 3) as listed under Note 2.

CDB-21-70003	**CDD-21-30003**
CDB-21-70001	**CDD-21-30001**

CD-31. Adjustable with external resistor (not furnished). Use with KHP relay (see page 2), Note 4.

CDH-31-30005

CD-45. Knob-adjustable. For heavy duty when used with PR power relay (see page 4) as listed under Note 6.

CDB-45-70002

NOTES

1. Has internal relay with DPDT contacts rated at 10 amperes, 120V AC.
2. Use with Potter & Brumfield relay KRP11AG-120V AC, KRP11AG— 120V or KRP11G— 120V AC or KRP14AG— 120V AC.
3. Use with Potter & Brumfield KRP5DG— 24V DC, KRP11DG— 24V DC or KRP-14DG— 24V DC relay.
4. Use with Potter & Brumfield KHP-17D11—24V DC relay.
5. Supplied with 180 seconds delay; adjustable to 1.8 seconds with external resistor (not furnished).
6. Use with Potter & Brumfield PR11AY—120V AC relay.
7. Provides delay on release; all others have delay on operate.

TIME ELAY RELAYS

12 SER The R12 Series time delay relays com- ne the eld proven R10 Series basic relay with a gh qu y delay circuit. The time delay circuit es sil n transistors throughout and the critical ming acitor meets the specifications for mili- ry use hese small DC variable time delay relays not se operate and will time as low as 0.1 econd. ming range of 0.1 to 120 seconds is anned three models: 0.1 to 2, 1.0 to 30 and 0 to 1 seconds. Each time range is varied with high olution 15-turn potentiometer. The inter- ally m ted R10 Series relay is equipped with PDT c acts rated 5 amperes. Solder terminals re prov d and mounting may be accomplished by 3-4 tud or sockets offering solder or printed rcuit rd terminals.

12. V able time delay with high resolution 15- rn p ntiometer. Calibrated timing capacitor eets cifications for military use. Fits sockets elow, notes 9 and 10.

XR12-1 PDT Solder terminal sockets and retainers.

NET $9.00

XR12-2 PDT Printed circuit terminal sockets and etainer

NET $9.00

L SER Designed for delay on operate, the CL eries similar to the CU with the exception that hey do false operate† and will time to 0.1 sec- nd. The solid state time delays are ideal for AC r DC plications. A DPDT KU relay rated 10 am- eres mounted in the same enclosure, forming a ompac ssembly. CL relays are enclosed in yellow olycar nate dust covers and are available in three ypes: d, resistor adjustable and knob adjustable. lug-in ick-connect terminals facilitate handling nd ho up.

L-41. plain case relay similar to the CU-41 with he e tion that it doesn't false operate. See age for mounting accessories (9KU).

UB/C 51. Knob-adjustable versions of CU en- losed slightly taller 51 style case. Same mount- ng ac sories as CU-41. CLB does not false operate.

IC 'S ES. Fixed time delay that is factory set nd c ot be modified.

NOTES

1. Has internal relay with DPDT contacts rated at 10 amperes, 120V AC.
2. Use with Potter & Brumfield relay KRP5AG- 120V AC, KRP11AG- 120V or KRP14AG- 120V AC.
3. Use with Potter & Brumfield KRP5DG- 24V DC, KRP11DG- 24V DC or KRP14DG- 24V DC relay.
4. Use with Potter & Brumfield KHP17D11- 24V DC relay.
5. Supplied with 180 seconds delay; adjustable to 1.8 seconds with external resistor (not furnished).
6. Use with Potter & Brumfield PR11AY- 120V AC relay.
7. Provides delay on release; all others have delay on operate.
8. Internal relay contacts rated at 10 VA, other ratings available upon request.
9. Does not false operate.
10. Internal relay has 5 ampere rated contacts.

VertiReed RELAYS

SERIES VR

Series VR Reed Relays are designed for applications where printed circuit board area is severely limited. The use of open bobbins provides protection for the reed switches and a rugged mounting support for the printed circuit terminals as well as low cost construction. For additional protection the coil leads and top switch leads are enclosed by the coil wrapper. The relays listed on the reverse side are standard. Other coil voltages, resistances and power requirements are produced on a special basis. Adaptations using small mercury wetted reed relays may also be obtained with a slight increase in height. As is the case with all DORAN Relays, latching versions are also produced to operate on momentary pulses, and both electromagnetic and electrostatic shielding may be included upon request.

CONTACT RATING:
FORM A & B UNITS: 10W or 120VA (.500A or 250V max.).
FORM C UNIT: 3W or V3A (.250A or 28VDC max.).

CONTACT RESISTANCE:
FORM A & B UNITS: .150 ohms max. initial.
FORM C UNIT: .200 ohms max. initial.

FRITCH: Frequency Responsive Switch Offers these Features

Douglas Randall, Inc., *FRITCH* combines solid state circuitry with reliable reed relay outputs into a component capable of responding to any selected frequency from 25Hz to 100KHz at speeds as fast as 75 operations per second. Bandwidth is ± 2% to ± 5% depending on signal voltage and temperature control. Typical operation is from a 5VRMS ± 10% signal, over a temperature range of −40°C to +65°C using a power supply of 24VDC with only 2MA standby and 25ma operating current. The ability of the FRITCH to function accurately with a relatively uncontrolled signal level and to provide complete isolation of output signal from input signal in addition to the features listed above, make it excellent for telemetry, touch tone decoding, remote selection of several command functions over one pair of lines, central station signaling and many other applications.

- **Broad Frequency Range—25Hz to 100KHz**
- **Low Signal Power—Only Inv**
- **Fast Response—As low as 5ms**
- **Shock & Vibration Resistan**
- **Plug-in or P. C. Mounting—in any position**

Assemblies are available to decode all touch tone frequency signals or any combination of frequencies between 25Hz and 100KHz. Units can be provided to fit existing hardware. Sensitive versions can be supplied which will respond to signals as low as 0.020 volts.

ULTRA-LOW CONTACT RESISTANCE
Guaranteed maximum: 5 milliohms.

HIGH VOLTAGE
Will break 15,000 volts peak RF and 70 amps for 1 μsec pulse.

VERTICAL MOUNT AND LOW PROFILE
For use where available space is limited. Low profile relay shown is .315" high. Vertical mount relay fits into .4" square.

SPECIAL MOUNTING
An example of one configuration designed to meet special mounting and terminal requirements.

SPECIAL REED RELAYS

In addition to standard relays Douglas-Randall, Inc. has developed many special versions to meet unusual size, terminal layout and electrical requirements. Special molding techniques make this possible without expensive tooling. Douglas Randall also makes special assemblies of reed switches, either molded or mounted on P.C. boards.

Printact®

LATCHING AND NON-LATCHING MAGNETIC RELAYS

Plugs into your PC board... mates with plated conductors

APPLICATION: In the design of low power switching circuits such as logic, counting, de-coding, gating, high frequency, the use of the Printact relay series "G" non-latching or "LD" and "LS" magnetic latching results in a compact low cost module. Reliability is assured by its unique design, which includes many features not generally available, as standard, in commercial relays.

DESIGN: Encapsulated coil, bifurcated gold alloy or palladium contacts, plug in without sockets or soldering, low bounce and chatter, low thermal E.M.F., series-break switching eliminates pigtail connections, permanent magnet avoids return spring and mechanical linkage, which assures continuous performance for many millions of cycles.

VERSATILITY: In addition, versatility of the series-break switching configuration affords the design engineer an option on etching the conductor patterns which mate with a given swinger blade, as common (Form C) or isolated (Form A and Form B) switching between make and break circuits.

SPECIFICATIONS AT 25°C

Coil Power — 0.5 watt "G" Series, 1.0 watt "LD" Series.
Contact Rating — dry circuit or low level with gold contacts; up to 2 amps 24v d-c res. with palladium contacts.

Cont. Res. — .050 ohm initial
Insulation — 1000 megohms
Operate Time — 10 ms or less
Pick-up max. — 75% of rated
Mech. Life — 100×10^6 cycles
45db Isolation at 220 Mhz
Dielectric — 1000 Vrms
Temp. — 30°C to +50°C
Release Time — 5ms or less
Drop-out min. — 10% of rated
Thermal EMF — 10 microvolts
65db Isolation at 40 Mhz

Conductor layout closely matches 75 ohm line.

FREE PC BOARD DESIGN AIDS

Send for Technical Notes PR262-D which details artwork, layout and board processing procedures and offers stick-on conductor patterns to overlay on the mylar providing switching configuration layouts for relay areas.

GENERAL PURPOSE MODULES AVAILABLE

Where a custom board is not planned, send for catalog illustrating a variety of general purpose PC boards with etched and plated switching patterns to accommodate single or multiple relays. Can be chassis mounted with standoff bushings. Solder pads for point-to-point wiring or edge-connector terminals are available.

BEAD PIN PC BOARD HEADER

For applications where the conductor pattern is not etched on your custom printed circuit board, the bead pin header has been designed for use as a solder-in socket: P/N 40300-1 (Rhodium), P/N 40300-2 (Gold) list 0.65 each with quantity discounts.

SNAPTRACK™ RELAY SOCKETS

- CAPTIVE WIRE CLAMPING PLATES
- 8-32 PAN HEAD TERMINAL SCREWS
- WIRE SIZE TO 12 AWG
- NEON LAMP OPTION
- BREAK RESISTANT BARRIERS
- RIGID PVC SNAP-TRACK™

SNAP-TRACK™ relay sockets provide a low cost convenient method for installing plug-in relays in control equipment. Continuous sections of Snap-Track, an extruded PVC, nonconductive mounting track, may be installed with rivets, screws, or adhesive material to accept relay socket assemblies. The sockets snap into position along the track. Snap-Track sockets consist of an assembly of G-10 Epoxy glass PC board a PC type relay socket, and specially designed barrier type terminal ocks. The socket assembly is wave soldered for circuit reliability. T minal points are clearly numbered with epoxy ink to expedite wire insta tion.

SNAPTRACK™ MINIATURE 4PDT RELAY SOCKETS

The 14BS Snap-Track™ relay socket provides screw terminal connections to a socket that accepts miniature 4PDT relays such as Potter & Brumfield KHP, Struthers-Dunn 281XDX, Clare GP-1, Sigma Series 67, Guardian 1300 and others. Number 4-40 pan head screws with captive wire clamping plates are provided. These screw terminals are large enough to accept 2 No. 14 AWG, 2 No. 16 or 4 No. 18 AWG wires without the need for ring or hook terminals on the end of these wires. A neon lamp wired across the coil terminals of the relay socket is offered as an option. The lamp indicates power is available at the coil terminals.

ACCESSORIES

8R and 11R PC board sockets of thermo setting plastic are offered separately. A **plastic drive rivet** provides a simple installation method for mounting Snap-Track™. A 3/16" diameter drill in a panel up to .125" thick with the mounting rivets provides adequate mounting at low cost. Relay and timer bails are offered to prevent relays and timers from vibrating out of the sockets in applications where vibration is present. A Tinnerman end clip is offered to secure the ends of the mounting track. A vertical tab helps prevent movement of the sockets laterally along the board.

TK2-12	12″	.60
TK2-24	24″	1.20
TK2-48	48″	2.40

*TK3 — holes punched 3″ O.C.

TERMINAL STRIPS FOR PC BOARDS

PC rpe terminal blocks are for direct insertion int rinted circuit boards. PCV blocks may be ha or wave soldered. PCV4 and PCV6 have 8- pan head screws with captive wire clamp- in iates and will accept up to 2 Number 12 AV wires. Spacing between terminals on PCV4 ar CV6 is .4375 inches. 2PCV series are on .3 centers between terminals and will accept 2 nber 14 or 4 Number 18 wires.

PMA SWITCHES

PMA-Powerak Switch is a permanent magnet actuated solid state proximity switch. Triggered by an internal reed switch which is sensitive to external magnetic fields, the solid state switch controls loads of 1 ampere continuous, up to 10 amperes inrush regardless of type of load; that is inductive, capacitive, or tungsten filament. The switch will operate from 24V thru 120V 60 hz. The reed switch trigger located internally is offset from the center axis to permit both axial and rotational adjustment in application. The Powerak is supplied with 2 nylon mounting straps to permit a variety of mountings.

Hi-Z™ HIGH VOLTAGE VOLTMETER

High Impedance
Portable
Instrumentation
.001V to 120KV

HV RELAYS MODEL E

Open style
50 to 100 amps
12 to 120 KV PK
12 KV $41.00
40 KV $65.00
120 KV $320.00

SPDT RELAYS MODEL E-DT

Economical

Open Style
12 to 70 KV
50 to 100 amps
15 KV $68.00
30 KV $110.00

SPHERE GAP RELAY MODEL EE

Small Size
Gravity operate
12 to 100 KV
15 to 50 amps
Adjustable
Sphere Gap contacts
0-15 KV to 20-120 KV PK
25 KV $69.00

HIGH CURRENT SWITCH MODEL GB

100 to 4,000 amps
Continuous
Small size
to 100 KV, PK test
Air solenoid operated
27 KV 600 A $190.00

HV ROTARY SWITCHES

MODEL R

To 100 KV PK
10 to 100 Amps
Multi-Pole
Multi-Position
25 KV 20 Amp
3 PDT $66.00

GROUNDING RELAYS MODEL D

Gravity operated
to 600 KV, 100 amps
Low corona
50 KV $140.00
120 KV $370.00

VOLTAGE DIVIDERS MODEL VD

Compensated
DC to RF
to 450 KV, PK
30 KV $150.00
120 KV $350.00

SPHERE GAPS MODEL S

Enclosed
Adjustable
to 600 KV, PK
2 to 40 KV $4[illegible]
6 to 88 KV $9[illegible]

HV SAFETY GROUNDING INTERLOCKS, SAFETY DEVICES, SPECIALTIES. Models pictured are examples of a related series. Currents are RMS continuous ratings. Voltages listed are Peak 60 Cycle Test values. Operating values are generally 1/3 to 2/3 that of peak test values. Spark-over is generally 10% to 30% higher than peak test listed. Let us quote on specific items since most models are available NO, NC, SPDT, and latching, with 115 AC actuators. Many items are not listed and prices and models can change without notice.

SCHRACK RELAYS

SCREW DOWN SOCKET WITH MOLDED TERMINAL STRIPS

No. RN 73301 — 8 Pin

No. RN 73302 — 11 Pin

For surface type installations and proto type work where screw terminals are convenient. Adequate barriers for hi-voltage installations.

STANDARD MOLDED PLUG

No. RN 78600 — 8 Pin

No. RN 78704 — 11 Pin

Accommodates RN 16035 or RN 16019 Dust Covers for building plug is modular circuitry.

STANDARD SOLDER LUG SOCKET

No. RN 78710 — 8 Pin

No. RN 78711 — 11 Pin

Conventional type molded socket with numbered pins — screw mounting.

SCHRACK TYPE HOODED PLUG

No. RN 78714 — 8 Pin

No. RN 78715

Permits any relay or component to be mounted remotely and to be plugged into standard socket in circuitry.

PRINTED CIRCUIT LUG SOCKET

No. RN 78712 — 8 Pin

No. RN 78713 — 11 Pin

Standard type for conventional circuit board assemblies — black molded with numbered pins.

DUST COVER FOR CAD SERIES

No. RN 16035 POLYSTRENE

with holes in base for screw mounting.

No. RN 16019 — Same as above but molded of Macralone*.

METAL DUST COVER FOR CAF SERIES ONLY

No. RD 10701 on request.

MINIATURE SOCKETS FOR RA RELAYS

No. RA 78700 — for screw mounting, made specially for mounting Schrack RA type relays but may be used for miniature modular circuitry with plug base and dust cover available on request. Precision type with spring-hold grounding terminal.

No. RA 78701 — for spring mounting.

No. RA 78702 — for printed circuit mounting.

PLUG MOUNTED ON METAL PLATE

No. RN 74221 — 8 Pin

No. RN 74104 — 11 Pin

Metal plate provides base for oversize dust cover in order to install components for modular circuitry.

LARGE DUST COVER FOR METAL PLATE

No. RN 16022 Polystyrene

Internal grooves provide means for mounting circuit boards with components.

No. RN 16034

Same as No. RN 16022 but made of Macralone*.

SOCKETS AND ACCESSORIES FOR RE RELAYS

No. RE 78700 Standard Socket
RE 78702 Printed Circuit Socket
RE 28800 Hold-down Spring

HIGH POLYSTYRENE DUST COVER

No. RN 16020

May be used with CAD Series.
Two holes in top for ventilation.

SOCKET FOR TYPE RTM

No. RT 28405 for printed circuits
RT 28406 — Screw type term
RT 28487 — solderless term
RT 28408 — w/solder lugs

HOLD DOWN SPRING

No. RN 28623

Provides quick removal of dust cover — fastens to mounting screws of standard type socket.

HOLD DOWN CLIP

No. RN 28611

SPECIAL SOCKET FOR CAF SERIES

No. RD 78700 — 8 or 11 Pin

Exclusive with Schrack. This socket accommodates either 8 or 11 pin base. Its small size and design provides for strip mounting with no loss of space.

BASE FOR SCHRACK CAF SERIES

No. RD 78600 — 11 Pins

May be used with above socket and dust cover for building modular component requiring U. L. specs for spacing.
for 8 or 11 wiring

No. RD 78601 — same as above but with printed circuit pins.

*Macralone is a polycarbonate resistant to high temperatures.

Self tapping screws for dust covers available on order.

SCHRACK ELECTRICAL SALES CORPORATION 1140 BROADWAY, NEW YORK, N.Y. 10001

Chemtron* REED RELAYS

Vacuum Encapsulated The "CHEMTRON" relay assembly is vacuum-encapsulated in epoxy to ensure the best possible dynamic characteristics and reliability. The patented encapsulation technique eliminates voids in the epoxy, minimizes relay failure, and absorbs external stresses that would otherwise be transmitted to the relay contacts via the pins.

All Welded Leads "CHEMTRON" circuit pins are welded to the reed contacts. Contacts are not bent to form the circuit pins because of the danger of changing the contact characteristics. Automatic soldering techniques may be used without internal "joint" failures.

Magnetic and Electrostatic Shielding "CHEMTRON" reed relays are enclosed in a housing that serves as a shield preventing magnetic interaction with other magnetic components in high-density packages. An internal electrostatic shield, standard on some "CHEMTRON" units, minimizes coil-to-reed capacitance coupling of AC signals for low-loss switching and maximum input-output isolation making them ideal for multiplexing applications.

The standard "CHEMTRON" line is tabled below. Please call or write for our catalog and complete specifications, or send details of your requirements. Chances are excellent that your application can be met from our stock line or from a relay we have already designed.

SERIES 225•1A 4.5 V COIL 6 V COIL 12 V COIL	<0.5 ms SWITCHING SPEED OPTIONAL SMALLER THAN A DIP IC IC DRIVEN 4.5 V COIL ELECTROSTATIC AND MAGNETIC SHIELD PATENTED "CHEMTRON" ENCAPSULATION SIZE: .810" x .210" x .210"
SERIES 226•1A 4.5 V COIL 12 V COIL	<500 μsec. SWITCHING SPEED SMALLER THAN A DIP IC IC DRIVEN 4.5 V COIL ELECTROSTATIC AND MAGNETIC SHIELD PATENTED "CHEMTRON" ENCAPSULATION SIZE: .810" x .210" x .210"
SERIES 227•1A 4.5 V COIL (with drive circuit)	<200 μsec. SWITCHING SPEED SMALLER THAN A DIP IC IC DRIVEN 4.5 V COIL ELECTROSTATIC AND MAGNETIC SHIELD PATENTED "CHEMTRON" ENCAPSULATION SIZE: .810" x .210" x .210"
SERIES 325•1A 4.5 V COIL 6 V COIL 12 V COIL	<0.5 ms SWITCHING SPEED OPTIONAL IC DRIVEN 4.5 V COIL ELECTROSTATIC AND MAGNETIC SHIELD HIGH-RELIABILITY CONSTRUCTION PATENTED "CHEMTRON" ENCAPSULATION SIZE: 1.410" x .260" x .260"
SERIES 450•1A•1C 4.5 V COIL 12 V COIL 24 V COIL	SMALLEST AVAILABLE FORM C (SPDT) IC DRIVEN 4.5 V COIL MAGNETIC SHIELD PATENTED "CHEMTRON" ENCAPSULATION SIZE: 1.080" x .390" x .390"
SERIES 451•1A 4.5 V COIL 12 V COIL 24 V COIL	SMALLEST AVAILABLE 1-AMP MERCURY WET IC DRIVEN 4.5 V COIL LOW CONTACT-NOISE AND RESISTANCE MAGNETIC SHIELD PATENTED "CHEMTRON" ENCAPSULATION SIZE: 1.080" x .390" x .390"

SERIES 651•1A•2A•4A 6 V COIL 12 V COIL 24 V COIL	3 AMP MERCURY WET CONTACTS LOW CONTACT NOISE AND RESISTANCE MAGNETIC SHIELD PATENTED "CHEMTRON" ENCAPSULATION SIZE: (1A) 2.635" x .615" x .650"*

A few of the modifications that can be obtained on "CHEMTRON" reed relays are: Low-thermal construction ☐ Special coil voltage or resistance ☐ Standoff feet (adds .020" to relay height) ☐ Special pin pattern ☐ RF type construction ☐ High voltage switches. For other modifications and free complete catalog, contact Self-Organizing Systems, Inc.

*Multiple contact configurations slightly wider.

*T.M.

SOLID STATE & REED RELAYS

ESCRIPTION

lid state and reed relays provide the most reliable types of isolated itching presently available. Solid state relays are the most rugged and stest (2 microsecond switching through 2000 G's). The Models 98 and 85-5050 are DC contact types (to 50 ma) whereas the 2828-3504 (4 amps) d 2850-40020 (20 amps) are AC types. Reed relays are the fastest, most gged and reliable of the electromechanical types (3 amps within 1 milli-cond through 50 G's). They have very high isolation between drive and ass enclosed contacts. The 7001, 8001, 8021 Microreed Relays are the nallest, lowest drive power units made. The 7031 and 8031 are dual-in-line ug-in units designed for transistors and integrated circuits (3 volts, 25 ma ive). The 7051 and 8051 latching reed relays are logical binary types with n-volatile memory (each contact remembers the last command). Series 10 are power type reed relays. The 651 and 671 types are light actuated relays (high isolation and solid state contacts). The Models 471 and 476 are under/over and bandpass frequency detectors for remote monitoring, control and decoding. The 2825-50200 and the C2835-28500 are time-delay relays having solid state and reed output contacts respectively. These units are now being used for many applications. They are virtually immune to shock and vibration making them ideally suited for aerospace, military, industrial, R & D usage where miniaturization, power conservation and elimination of maintenance are prime requisites. Microfilm data sheets and application notes will be found in VSMF or the Thomas Supplementary File.

Phone, wire or write our engineering department for an immediate reply, recommendation or catalog. Many shipments are same day, if you call early.

TELEDYNE TRANSISTOR CASE RELAYS

All welded construction
TO-5 transistor type enclosure
Contacts — gold plated for dry circuit requirements
Hermetically sealed
Excellent for high isolation and RF switching
Capable of withstanding high shock and vibration

Insulation Resistance — 10,000 megohms min between mutually insulated terminals
Terminal Strength — Each terminal will withstand a 1 lb. pull in any direction
Temperature Range — −65°C to +125°C (200°C units available)
Enclosure — All welded. Hermetically sealed.
Applicable Specification — Meets or exceeds MIL-R5757E
Rated Duty — Continuous
Contact Resistance — 0.1 ohm max before life 0.2 ohm max after life at max rated current

TELEDYNE SOLID STATE RELAYS

Industrial 50-60 Hz — **Military 50-500 Hz**

Solid state relays that meet or exceed all categories of MIL-STD 704A. Transient protected on input and output. Features include an ultra-sensitive "coil" (compatible with 5 volt logic systems, such as TTL), and a zero-voltage switching option to minimize RFI. They can switch over 5 KW, resistive or inductive loads.

Extremely high reliability and maintenance-free operation make them ideal for aircraft control and power system applications. Three input "coil" ranges are available, 3-8 VDC, 7-85 VDC and 90-230 VAC. Features include low contact resistance (50 milliohms typical) and contacts capable of withstanding overloads 1000% above ratings. Lack of moving contacts prevent arcing, permitting switching in explosive atmospheres, controlling motors, solenoid valves, actuators, transformers, etc.

The high contact surge rating is ideal for lighting control systems (5000 watts of tungsten lamps can be switched.)

VACUUM RELAYS

Torr Laboratories, Inc. is a major manufacturer of high voltage high vacuum relays in America today. Torr* produces a broad line of high voltage relays in a modern electron tube facility from the low power to the megawatt range. Standard relays are available from stock. Special items and modifications are available for rapid delivery.

Torr supplies high voltage, high vacu on an international basis for applications telemetry, radar pulse networks, RF equipment, voltage power supplies, electromedical devices many other systems. Flexible manufacturi search facilities provides quick reaction from development of a special relay design to the

oduct n product.

Ce mic relays for very high frequency applica- ns ar also available. Many of the relays shown meet L spe fications. This data is available upon request.

To has 15 issued U.S. Patents on high voltage lays, Ray tubes, lasers and related devices. Advan- s in rnology** and manufacturing skills in elec- n-va um devices makes Torr preeminent in the gh va um relay field.

TORR OLOGY: The science that deals with the develop- ment control and measurement of the vacuum environ- ment he processes and techniques for maintaining this state nd the art of performing useful functions therein.

TORR® HIGH VACUUM RELAY ADVANTAGES:

- ★ LONG LIFE WITHOUT CONTACT DEGRADATION
- ★ HANDLE HIGH PEAK CURRENTS
- ★ FAST RECOVERY FROM OVERLOADS
- ★ IDEAL FOR HIGH DENSITY PACKAGING
- ★ EXCELLENT FOR SEVERE ENVIRONMENTS
- ★ ALL RELAYS VACUUMIZED TO BETTER THAN 10^{-9} TORR
- ★ 24 MONTH WARRANTY!

NEW! HIGH RELIABILITY, LONG-LIFE!! TAKAMISAWA MQR RELAYS

Introducing the small, general purpose relay, another product in the already acclaimed high quality MQ series. The MQR is more reliable and accurate than any other conventional relays and has superb performance and function. The MQR is an all-new general purpose relay which permits selection of the perfect relay to meet your requirement in all types of applications.

2 Form C plug-in use MQR relay

4 Form C Magnetic Latching type printed circuit board MQK

6 Form C printed board type with ground terminal MQF

■ FEATURES

1. International standard type
2. Combination plug-in or PC terminals
3. Bifurcated contact with card lift-off mechanism
4. Mechanical life expectancy more than 100 million operations
5. Form A, B, C, and D contact available
6. Quick operation and release
7. With clear plastic (polycarbonate) dust cover
8. Magnetic latching type available

■ MQR SPECIFICATIONS

1. Allowance for coil resistance ..... ±10% rated value (at 20°C)
2. Min. operating power. 0.05W (2W), 0.25W (4T)
3. Dielectric strength.....500VAC for 1 minute
4. Insulation resistance.....Greater than 100MΩ at 250VDC at normal room temperature (5~35°C)
5. Contact resistance ..... Approx 40mΩ
6. Contact force.....Approx 10gr
7. Contact material.....Gold-plated GS (3μm) .....Gold-plated Ag-Pd (20μm)
8. Mechanical life.....Greater than 10^8 operations
9. Shock resistance ..... 7~15G (depending on direction)

■ Type MQR Standard Coil Table

* 1: Items in ( ) differ depending on the shape of the terminals and installation dimensions given in the separate table.
* 2: The figures in [ ], are as follows in accordance with contact spring combination: 2 Form C 27... 4 Form C 48... 6 Form C 69...

■ CLASSIFICATIONS

The following MQR relays are available in accordance with terminal shapes and installation dimensions.

MQR	General type relay with solder terminals
MQE	General type relay with solder terminals and ground terminal
MQB	General type relay with Printed circuit board terminals
MQF	General type relay with printed circuit board terminals and ground terminal

• The following types are also available.

MQH	Magnetic Latching type relay with solder terminals
MQJ	Magnetic Latching type relay with solder terminals and ground terminal
MQK	Magnetic Latching type relay with printed circuit board terminals
MQL	Magnetic Latching type relay with printed circuit board terminals and ground terminal

THE Wheelock FAMILY OF REED RELAYS

ULTRA-MINIATURE REED RELAYS

WHEELOCK SIGNALS INC.

Series 372

Series 379

- Occupies only 0.02 cu. in.
- Operates on only 50 mw of power
- Operate time 300 microseconds (typical)
- Insulation resistance as high as 1 x $10^{14}\Omega$
- Contacts rated at a full 7 watts

1A

Series 442

- Smallest Multi-Pole Relays in Industry
- Occupies 0.055 cu. in. per pole
- Operates on 90 mw
- P.C. board mount
- Contacts rated at full 7 watts

MICRO-MINIATURE REED RELAYS

- C tact rating: 1 /, 500 ma
- C voltages: 6 2 or 24 VDC
- ulation resistance: 5 $10^{10}\Omega$

PRINTED CIRCUIT BOARD MODEL

Series 3421

HIGH DENSITY MODEL

Series 360

AXIAL LEAD MODEL

Series 330

MINIATURE REED RELAYS

Series 502

- All contact configurations available
- Coil voltages: 6-48 VDC
- Contact rating: 10 watts
- Standard 1" grid spacing

Series 262

- Contact arrangements, single pole to 6 pole models
- Coil voltages: 6 to 48 VDC
- Coil ratings: 125 to 600 mw
- Contact rating: 10W

TANDARD REED RELAYS

- oil ratings: 200 to 1500 mw
- ontact ratings to 50W
- perating time: 2.5 ms (typical)
- oil voltages: 6 to 120 VDC

MERCURY WETTED REED RELAYS

Series 3002 & Series 3002 Hg

- Contacts: 1 to 5 pole
- Coil ratings: 200 mw for 1 pole, to 1500 mw for 5 poles
- Coil voltages: 6 to 120 VDC
- Contact rating: 3 amp up to 50W

Wheelock

For complete details on how Wheelock can help solve problems involving space, weight and environmental limitations, write for the NEW Wheelock Reed Relay Catalog. It features the latest test data on reed relay life and reliability, dynamic characteristics and static characteristics.

APPLIANCE SWITCHES

HIGH SNAP SWITCHES

FEATURES:

- Meets with JIS-C-6571, MIL & JAN standards
- High performance
- Long life
- Unique construction—6 patents

APPLICATIONS:

- High load (especially motor load, 550W 250V) machine tools, industrial machinery, electric tools, projectors, etc.
- High reliability & performance communication equipment, measuring equipment & instruments, medical equipment, electrical equipment for vehicles, ships, and aircraft, computers, office machines, etc.
- Electrical home appliances, optical instruments, lighting, disposal, air-conditioning, acoustical equipment, musical instruments, etc.
- Signal controls, broadcasting equipment, X-ray devices, telephones, radios, etc.

HP-RELAYS

- UL Approval
- Two types: solder type (S-terminal) and plug-in (R-terminal).
- Both types available for 6V, 12V, 24V, 48V, and 110V DC applications, and 6V, 12V, 24V, 48V, 115V, 220V, and 240V AC applications.
- Both AC & DC high power applications at all voltage levels.
- Contact arrangements: DPDT, 3PDT, and 4PDT available in all types at all voltages.
- Mech life: over 10,000,000

- Long life, excellent reliability, and superior contact performance up to 10A 250V AC
- Complete standardization and simplification allows minimized sizes and lowest prices.
- Totally interchangeable with U.S. components, including pin configurations.

Max. switch-off current	10A AC
Max. switch-on current	20A AC
Max. contact current	10A
Max. contact voltage	250V AC
Max. contact power	120W
Shock resistance	10G

R-SERIES
Can only be used for plug-in into standard sockets. Panel & surface mounting sockets are available for HP relays.

S-SERIES
Can be used without alteration with direct solder tab connection or with AMP-connectors, type Faston 205. For plug-in or printed circuit applications.

K-RELAYS

- UL Approval
- 10P pin contact force
- Mech life: 10^8
- Low operating force
- Negligible contact bounce
- Interchangeable
- 20 gold-plated mercury contacts
- Long life expectancy
- Low price

Max. switching capacity	2A; for type K2F—5A
Max. switching voltage	220V
Max. switching power	50W (120VA); for type K2F—100W (500VA)
Max. contact current	4A; for K2F—6A
Vibration resistance	10G to 55Hz

Type K2 DPDT

Type K4 4PDT

Type K6 6PDT

Type	Current	Contacts	Voltages 3	6	12	24	28	42	48	60	110	220
K2	DC	DPDT	x	x	x	x		x	x	x	x	
K2A	50Hz	DPDT		x	x	x			x		x	x
K2A	60Hz	DPDT		x	x	x			x		x	x
K2F	DC with 5A contact	DPDT		x	x	x	x	x		x	x	
K4	DC	4PDT	x	x	x	x			x	x	x	
K6	DC	6PDT		x	x	x			x	x	x	

R-RELAYS

- New type of high speed, SPDT, reed contact relay
- 5P rhodium twin contacts
- 60 megohm contact resistance
- High reliability
- Low operating power
- Up to 500Hz operating frequency
- Temperature compensation
- Mechanical life: 10^9
- Low price

Type RS Shielded Hermetically sealed

Type RH Hermetically sealed

Type RO Unsealed

Max. switching load	1A
Max. switching voltage	110V
Max. switching power	20W
Switch-on/contact current	1.5/1
Shock resistance	30G

TWO BASIC TYPES:
Single side stable SPDT contacts—to be used as a neutral nonpolarized relay.
Bistable (latching) SPDT contacts—to be operated by either single wound coil (chopper) or double wound coil.

NH-RELAYS

- For RF and dry circuit applications
- Suitable for DC operation
- SPDT and DPDT
- High reliability
- Long life expectancy
- Low contact resistance
- NH, NDH, N, and ND types available at following voltages: 3V, 6V, 12V, 24V, 28V, 42V, 60V, 100V

NH and NDH

Hermetically sealed MIL-R-5757D

N and ND

Plastic cover

HM-RELAYS

- SPDT
- Both P and S types available at following voltages: 3V, 6V, 9V, 12V, 18V, 24V, 35V, 42V, and 60V.
- Minimum 15P contact pressure
- High life
- Low price
- Mechanical life: 20,000,000

Max. switch off current	3A
Max. switch on current	10A
Max. contact current	6A
Max. contact voltage	250V
Max. contact power	90W/1 KVA

P TERMINAL

P terminal
Mounting by printed circuit terminals

S TERMINAL

S terminal
Mounting by two mounting screws to an insulating plate.

Sole agents for components manufactured by Matsushita Electric Works, Ltd.

CONTROLS SYSTEM 32

a job shop mini-computer for repeat cycle operations

SYSTEM 32 SHOWN IN "NEMA 12" ENCLOSURE

FEATURING:

- UP TO 1000 SECONDS PER CYCLE
- SELF TESTING FOR FAST SET-UP
- FRONT ACCESS FOR WALL BOX MOUNTING
- FIVE INDEPENDENT FUNCTIONS — EXPANDABLE
- EXACT TIMING DIVIDES DOWN 50/60 CYCLE LINE
- DIRECT DECIMAL DISPLAY IN SECONDS OR MINUTES
- FAIL SAFE — REMOTE SAFETY AND SET-UP CONTROL
- MULTIPLE FUNCTIONS WITHIN A FUNCTION PER CYCLE
- ALL SILICON SOLID STATE — VERY HIGH NOISE MARGINS
- NO SOFTWARE PROGRAM NEEDED — FOREMAN CAN OPERATE

STYLE 1
STANDARD PANEL MOUNTING
FOR A.C. POWER CONTROL

Designed for repeat cycle operations in the process control industry, this job shop mini-computer can be easily programmed by the foreman to permit automatic to be extended to short runs. Program it as an operation is being set up, without purchasing software or re-punching tapes.

DESCRIPTION

SYSTEM 32 can control the timing and sequence of five sets of solid state relays that may drive directly 3ϕ or single phase motors and solenoids.

The start-stop and recycle times of 5 channels can be plug programmed in the basic mode. Next, some channels can be started subject to others being on or off. Absence of significant plugs permits multiple starting and also channels can be shorted together or gated by limit switches giving further versatility. The time-base can be shortened for any of the three decades to divide by numbers less than ten.

In the TEST mode the indicator lamps instantly show every gated time for setting up. Time can be stopped or reset with or without controls. Manual adjustments such as "switching to final cycle" can be made at remote locations. The versatility and full capabilities of SYSTEM 32 can be quickly appreciated with a demonstration.

MANUAL CONTROLS

PROGRAM PLUGS: Select start-stop and recycle times of 5 channels for up to 1,000 seconds. Select qualified starts.

TEST MODE SWITCH: Disconnects outputs, speeds up and stops timing to display each gated function. Needs to be restarted to the next time selected by the program plugs.

CONTROLS SWITCH: Disconnects outputs to permit timing without activating the relays or outputs.

TIME SWITCH: Permits timing to be stopped while the controls continue in the same state.

RECYCLE SWITCH: For repeat cycle or one time/last time operation.

START BUTTON: For initial or continued timing in one time/last time or interrupted operation and in processing Test Mode outputs.

RESET BUTTON: Restores timer to zero and disconnects all outputs.

POWER SWITCH: Timer and controls switch; activates power on reset.

SPECIFICATIONS

INPUT: 115 (230) ±15% at 50/60 cps, ½ (¼) ampere.

OUTPUTS: Short circuit proof, plus 10 volts, 250 ohms to common.

TIMING: 1,000 seconds standard, decimally displayed.

REPEATABILITY: Accurate to line frequency, ±1 millisec.

TEMPERATURE: Operates over −15 to +60°C.

SIZE: 12¼ x 15 x 4¼" (w x h x d).

WEIGHT: 6 pounds.

HOW TO ORDER

CONTROLS SYSTEM 32: Basic designation is System 32-60-115. The 60 indicates the number of cycles divided down, in this case a 1 second time base for 60 cps line. Divide down values available without extra charge — 5, 6, 10, 12, 20, 24, 25, 30, 40, 48, 50, 60, 80, 96 and 128. The 115 may be replaced with 230 for that line voltage. **PRICE: $600.**

REMOTE CONTROL: Order remote control box separately. It contains all switches except TEST Cable or special connector would be extra. **PRICE: $50.**

RELAYS: Specify separately. Relays are mounted and wired for front access when ordered with the controls system.

CASE: A factory dustproof enclosure, (NEMA class 12), is available for System 32. Overall size: 15 x 17½ x 6¼ (w x h x d). **PRICE: $50.**

CONTROLS SYSTEM 24

This system is a rack-mounted version with a 24 hour period divided into minutes or sub-multiples of these periods. Very useful for overnight testing, heating cycles or daily routines. Size: 19 x 10½ x 4¼. **PRICE: $600.**

MANUFACTURERS OF COMPONENTS THAT INTERFACE BETWEEN COMPUTER LEVEL SIGNALS AND MECHANICAL OR ELECTRICAL FUNCTIONS

SOLID STATE A.C. and D.C. RELAYS

STYLE 2 — HIGH DISSIPATION CASE FOR MULTI-PHASE POWER CONTROL

FEATURING (A.C. UNITS):

- VOLTAGE RATINGS TO ±600 VOLTS
- CURRENT RATINGS TO 20 AMPERES
- SURGE CURRENT RATINGS OF 1000%
- LINE FREQUENCY, 25 TO 1000 C. P. S.
- ZERO VOLTAGE SWITCHING MINIMIZES NOISE
- RUGGED METAL CASES, EPOXY ENCAPSULATED
- 1, 2, 3 & 4 PHASE CONTROL OF A.C. POWER
- ALL SILICON SOLID STATE—NO MOVING PARTS
- COMPLETE ISOLATION OF CONTROL AND "CONTACTS"
- HIGH INPUT IMPEDANCE COMPATIBLE WITH I.C. LEVELS

STYLE 3 — PRINTED CIRCUIT CARD MOUNTING FOR A.C. AND D.C. CONTROL

Designed for low level control of A.C. powered motors, solenoids, lighting and peripheral equipment, these relays contain no moving parts, contacts or lamps, give maximum reliability without the shock and vibration effects and deterioration of electromechanical devices. Typical short circuit voltage drop is 1 V r.m.s. with open circuit leakage less than 1 m.a. at max. voltage and temperature. Operating temperature is from −15 to 85°C.

The D.C. RELAYS are isolated solid state switches designed to control small direct current motors, indicators, and numerous devices where absolute reliability, and bounce free, very high speed operation is essential. Normally open circuits will block D.C. of the polarity shown. An A.C./D.C. switch is made by connecting two poles, back to back in series. Parallel connection will double the current rating.

DESCRIPTION A.C. RELAYS	MODEL	NO. OF POLES	AMPS. R.M.S.	CASE STYLE	CASE WATTS	INPUT OHMS	PRICES 1 to 24 ±200v	±400v	±600v	INPUT OR CONTROL

CODI SEMICONDUCTOR

DIVISION OF COMPUTER DIODE CORPORATION

Pollit Drive, Fair Lawn, New Jersey 07410 • (201) 797-3900 • TWX (710) 988-2241

VOLTAGE VARIABLE CAPACITORS

CODI Semiconductor's voltage variable capacitor (VVC) product line is one of the broadest, high-quality lines in the industry. **CODI** offers VVCs with low leakage, ultra-high Q, high reverse voltage, very high capacitance, high capacitance-to-voltage change ratio, and precise, reproducible tracking of capacitance-to-voltage change.

These characteristics make the CODI line of VVCs ideal for tuning, modulation and harmonic generation, especially when matched characteristics are required to assure tracking, or when matched and graded sets are required — as in voltage variable delay lines.

CODI's BiTaxial® and alloyed VVCs are available with capacitance values as high as 1000 pf; others have Q values as high as 800 at 50 MHz and −4 volts. The high degree of uniformity that results from the special CODI process technology makes tight tolerances and matched characteristics readily available.

To verify compliance with design specifications, **CODI** Semiconductor offers computer-analysis data for any VVC parameter, under varied conditions.

HIGH Q VVCs — IN5461A through IN5476A

ELECTRICAL CHARACTERISTICS: (T_A = 25°C unless otherwise noted)

CODI SEMICONDUCTOR

DIVISION OF COMPUTER DIODE CORPORATION

Pollit Drive, Fair Lawn, New Jersey 07410 • (201) 797-3900 • TWX (710) 988-2241

600 mW LOW VOLTAGE AVALANCHE ZENER DIODES

CODI Semiconductor's proprietary BiTaxial® process has made possible avalanche diodes with the lowest voltages available today.

The new process yields an end product which is close to the "ideal" diode: sharp breakdown, low zener voltage, low noise density, lower dynamic impedance and low reverse current.

GENERAL PURPOSE, (GLA) • LOW LEAKAGE (LLA) • HIGH TEMPERATURE (HLA)

Note 1: Case Type — these devices are also available in a micro-axial package. To specify the **micro** package, insert the prefix letter M before the part number, for example, MGLA 28. (See data sheet MGLA 28 to MGLA 100).

Note 2: Tolerance — tolerance is specified by the type number suffix letter. No suffix letter ±10% Suffix letter A ± 5% Suffix letter B ±2%

Note 3: Dynamic Impedance — dynamic impedance is measured at Izt with 10% AC superimposed (60 Hz RMS).

EMPERATURE COMPENSATED ZENER REFERENCE DIODES

ODI Semiconductor's temperature-compensated zener diodes operate under severe environmental conditions. Designed for use as stable DC voltage reference diodes, they meet or exceed all mechanical and environmental requirements for industrial and military applications.

CODI Semiconductor also manufactures a full line of low-voltage, controlled-temperature-coefficient zeners designed to operate at current levels from 0.25 ma to 10.0 ma.

also supplies the popular 1N746A through 1N759A series.

CODI SEMICONDUCTOR

DIVISION OF COMPUTER DIODE CORPORATION

Pollit Drive, Fair Lawn, New Jersey 07410 • (201) 797-3900 • TWX (710) 988-2241

MICROMINIATURE DEVICES

CODI Semiconductor offers many of its devices in packages especially designed for use in microcircuit hybrid assemblies. These include chips, pellets, axial leads and micro strips ("lady bugs"). These package options permit the microcircuit designer to specify high-precision, low-voltage avalanche and temperature-compensated zeners and voltage variable capacitors — devices which have not been available in microminiature packages.

CHIPS

Zeners with V_z up to 7 volts; all CODISTORS.

A = 0.015″ to 0.050″, with 0.005″ increments.
B = 0.012″ for zeners and up to 2-junction CODISTORS.
Add 0.008″ for each additional junction.
Surface Finish: Nickel (white or yellow gold plated) for pasting or soldering; aluminum, gold or silver for lead bonding.

MICRO-AXIAL

All devices.

MICROSTRIPS

All devices except CODISTORS over 1.5V.

Completely encapsulated and immune to all normal handling haz s. Excellent for hybrid and RF applications, or as substitute for li or channel packages. Suitable for attachment with conductive epoxy, wel g or soldering.

PELLETS

All devices.

A = 0.040″ to 0.060″, with 0.005″ increments.
B = 0.030″ for all devices, including CODISTORS with up to 2 junctio
Add 0.008″ for each additional junction.

CODISTOR®

FORWARD REGULATOR DIODES

CODI forward regulator diodes featuring low voltage and low dynamic impedance. Voltage range is from 0.3 to 3.0 volts, or even higher on request. Typical applications include low-voltage regulators, low-voltage reference, transistor biasing, noise rejection, and meter protection. CODISTORS are available with from one to six junctions in a standard **DO-7** or a **micro-axial** case.

MAXIMUM RATINGS:

POWER DISSIPATION: 250 mW.
POWER DERATING (from 50°C): 2.1 mW/°C.
STORAGE & OPERATING TEMPERATURE: −60°C to 175°C.
SOLDERING TEMPERATURE (10-second immersion): 300°C.

MECHANICAL DATA:

PACKAGE: Standard **DO-7** case; available in other packages as shown above.
FINISH: Leads are gold-plated (weldable and solderable).

ELECTRICAL CHARACTERISTICS (@ 25°C):

he DI3ERT BLINN COMPANY has for many years designed, fabricated and supplied specialty hardware items r the apidly changing and expanding electronics industry. Our vast experience in plastic and metal fabrica- on g rantees you the best possible service for your particular needs regardless of quantity.

HEAT SINK DISSIPATORS

Efficiency, light weight and economy are incorporated in a complete line of professionally engineered heat sinks available in a variety of sizes and shapes. Material: Aluminum 6063-T5 alloy, mill finish. Lengths to 5 ft. available. (Serrations--U.S. Pat. No. 3163207). Can be cut, drilled, anodized or painted to your specifications.

CATALOG SERIES — AHS

NYLON TRANSISTOR PADS

Precision molded from Zytel 101 (MIL-P-20693), these pads provide an economical insulator and thermal barrier with high dielectric strength. Resist continuous exposure to 135° C.

CATALOG SERIES — TPN

DIALLYL PHTHALATE TRANSISTOR PADS

Available with and without stand-offs in configurations for all applications, these pads are molded of glass-filled Diallyl Phthalate (Mil-M-14F SDG) and provide an excellent mounting base. They resist continuous exposure to 400°F. and offer very high dielectric strength.

CATALOG SERIES — TPD

MOUNTING KITS

These and other standard kits incorporating mica, beryllium oxide or anodized aluminum insulators provide the parts necessary to mount all semi-conductors. Special materials and configurations can also be furnished to your specifications.

CATALOG SERIES — MK

BERYLLIUM OXIDE TRANSISTOR HEAT SINKS

Made of high purity (99+ %) sintered BeO, these sinks provide a satisfactory solution to the design engineer where electronic applications require both dielectric insulation and high heat transfer.

CATALOG SERIES — BOS

MICA INSULATORS

Delbert Blinn mica insulators are precision stamped from quality controlled stock and will withstand temperatures to 1000°F. with negligible dehydration. Standard thickness is .002 ± .001. Other designs, shapes, thicknesses or tolerances are available on special order.

CATALOG SERIES — MI

HEAT SINK MOUNTING INSULATOR

Delbert Blinn mounting insulators are precision molded of Microlon "202" and provide a practical, compact and economical method for mounting and insulating all standard heat sinks.
These insulators are capable of continuous operation to 175° C. and have a dielectric strength of 340 V/MIL.

CATALOG SERIES — HSM

NYLON CUP WASHER FILLERS

Employed as insurance against damage, these quality fillers are molded from high strength Polyamide (nylon) and guarantee chip and crack free panel installation.

Available in Nos. 6, 8, 10 and 12 screw sizes.

CATALOG SERIES — NWF

M y other heat sink, trans- ist pad and specialty items ne shown above are avail- al

W e for additional informa- ti

When custom designs or modifications of standard electronic hardware parts are needed, our years of experience in the molding, extruding, stamping and fabrication of metal and plastic parts enables us to supply you with parts unsurpassable in quality.

We can help you successfully meet competition in today's highly competitive market.

SINGLE PHASE BRIDGES

½ Amp to 25 Amp... 50 to 2000 PIV

EDI offers the most complete line of packaged bridges ranging from the encapsulated printed circuit type with current ratings to 2 amperes to the metal case, beam lead power bridges with ratings up to 25 amperes.

The printed circuit types are designed to provide the most compact packaging and are transfer molded epoxy eliminating voids, providing corona protection and the maximum electrical, mechanical, and thermal reliability.

The metal case MINIBRIDGE series has been designed to replace larger bridges and eliminate 4 stud rectifiers in power supplies, converters, inverters, motor control circuits and DC motor starters. Their unique beam lead construction, used instead of discrete rectifiers, allows better heat transfer from junction to case and lower junction operating temperatures. Universal three way terminals (snap on, wrap around or solder) make connections simple and the insulated metal case provides maximum thermal conductivity.

Diffused silicon junctions displaying avalanche characteristics are used and these bridges display high surge capability and low leakage.

HIGH VOLTAGE AXIAL LEAD SILICON RECTIFIER CARTRIDGES

pi's h voltage, axial lead cartridges offer peak inverse voltages to 50,000 olts a forward current ratings to 500 mA (1 Amp in oil). Constructed with ffused unctions displaying avalanche characteristics, these assemblies dis- ay hig surge capability and low leakage. Applications include CRT display, scillis e, TWT power supplies, electrostatic applications and low power adar. F t recovery versions are available for high frequency and pulse inputs.

HIGH VOLTAGE SILICON RECTIFIER PACKS

EDI's high voltage rectifier packs, offer peak inverse voltages to 50,000 volts and forward current ratings to 3 amperes. These assemblies are constructed with junctions displaying avalanche characteristics to provide proper voltage distribution and inverse power dissipation.

Applications for these field tested, performance proven units include radar and other pulse equipment, induction heating and forming equipment, laser power supplies, electron beam welders. Fast recovery versions are available for use with higher frequency inputs to reduce size of power sources and for circuits with fast rise and fall time pulses.

MINIATURE MOLDED EPOXY, AXIAL LEAD SILICON RECTIFIERS

offer the most complete range of miniature silicon rectifiers ranging from 50-1 0 volt general purpose devices to miniature high voltage devices h 600 volt inverse ratings. Both standard and fast recovery versions are ilable. The current range is from 150 mA to 3 amp dc. Primary features are insu ed body, diffused junctions, avalanche characteristics, high surge pabilit s and low leakage.

EASTERN DELTA CORPORATION

29-09 S. BROADWAY FAIR LAWN, N.J. 07410 201/797-4200

Applications

- RELAYS
- SCR CIRCUITS
- IC CIRCUITS
- TRANSISTOR CIRCUITS
- BRAKES CLUTCHES
- MOTORS
- CONTACTORS
- SOLENOID VALVES
- RF INTERFERENCE
- SILICON & GERMANIUM RECTIFIERS
- TELEPHONE SWITCHING
- COMPUTERS
- MICROSWITCHES
- BUSINESS MACHINES
- STEPPING SWITCHES

CONTACT PROTECTORS
ARC SUPPRESSORS

SELISTORS®

...Eastern Delta selenium SELISTORS® for arc suppression and contact protection as well as transient voltage elimination have been in use, literally by the millions for over ten years.

These SELISTORS® and miniature rectifiers are practically monolithic devices due to the total epoxy encapsulation method employed. Their high resistance to humidity, salt spray, shock, vibration and fungus yield an extremely high reliability device.

Other rectifier configurations such as doublers, center taps, half wave, etc. are of course available.

All devices can be tailored to fit printed circuit boards.

"SELISTOR"® is a trademark of the Eastern Delta Corporation for its line of arc inhibiting devices.

NICKEL-CADMIUM CHARGER

An inexpensive capacitor, such as a wrap and fill type, and a low voltage bridge rectifier when wired as shown constitute a small, efficient, dependable battery charger suitable for low cost, high production applications such as rechargeable flashlights, electric shavers, toothbrushes, etc.

FREE...PROBLEM SOLVERS!!!

Write on company letterhead for "No Charge" samples, recommendations, trouble shooting etc.

We're at 201/797-4200

SEMICONDUCTORS

MONOLITHIC INTEGRATED CIRCUITS

Monolithic Integrated Circuits offer reduced size and fewer connections with increased reliability. The entire circuit for each product is contained on a silicon substrate packaged in a dual-line configuration having either 8 or 14 leads. Power devices each have a heat sink tab for transferring heat to the PC board heat sink.

GE TYPE	DESCRIPTION
PA189	IF amplifier/discriminator
PA223	Operational amplifier
PA230	Low level amplifier
PA234*	One-watt audio amplifier
PA237*	Two-watt audio amplifier
PA238	Operational amplifier
PA239	Dual preamplifier
PA245*	Five-watt audio amplifier
PA264*	Five-watt voltage regulator
PA265*	Five-watt voltage regulator
PA424	Zero voltage switch
PA436	Phase control
PD455	Six-stage bistable frequency divider (MOSFET)

*With heat sink tab for transferring heat to heat sink

SOLID STATE THYRATRONS

GE Type	Peak Anode Voltage	Cathode Current	May Replace
S26	200 V	1.0 A rms at 30°C	2D21
S27	200 V	1.0 A rms at 30°C	2050

Max. Temp T_A = 125°C.

STANDARD TRIAC CIRCUIT ASSEMBLIES

Components are mounted on a printed circuit board and equipped with an extruded aluminum heatsink. All current carrying components electrically isolated from heatsink. Applications include resistance heat control, shaded pole or permanent-split capacitor type motor speed control, universal type motor speed control, incandescent lamp dimming, etc.

120 V (suffix **1, 3, 5**); 240 V (suffix **2, 4, 6**).

AC POWER CONTROLLERS

Voltage switching provides low RFI levels. Solid state control, including monolithic integrated firing circuit, for long life and high reliability. High input impedance allows use of sensors hookup at any point from 5K to 100K ohms.

GE Type	Line Voltage 60Hz Vrms	Line Voltage Peak V	Max. Cur. A	Max. P_D W	V_1† Max. V	V_1† Typ. V
S300A1	120	200	10	15	10	8

S300A5	277	500	10	17.5	10	8
S300A6	277	500	15	24.2	10	8

Inductive load of at least 4.2 amps rms rating be used at all times. Inductive loads cannot be used with these modules. † Voltages developed between S_1 and S_2. Sensor resistance has one side common with AC line (S_1 is common with L_1).

PHASE CONTROL POWER MODULES

All solid-state control, including a monolithic integrated control circuit and a triac power switching device, controls resistive or induction motor loads up to 3600W. Can operate with a wide variety of variable resistance sensors and d-c tachometer signals. High gain trigger circuitry allows wide range of controlled output with small changes in input signal.

GE Type	Line Volts 50/60 Hz Vrms	Line Volts Peak V	Max. Curr. A	Max. P_D W
S300A1	120	200	6	10.5

S300A5	120	200	15	17.5
S300A6	240	400	15	21.8

Max V_1 = 11.5 V, Typ V_1 = 9.4 V.

SOLID-STATE FAN-MOTOR SPEED CONTROLS

New line of speed controls that consists of a triac a-c power semiconductor and all necessary control circuitry and heatsinking to afford manual speed control of permanent split capacitor and shaded-pole fan motors. All devices are mounted on a printed circuit board and are designed for direct mounting by means of the potentiometer bushing provided.
4A, 120 Vrms

GE Type	Description
S400A1	Basic control circuit
S400A1SC	Basic control circuit plus RFI suppression
S400A1SC1	Basic control circuit plus RFI suppression and automatic line-voltage compensation

SILICON GATE-CONTROLLED AC SWITCHES
BI-DIRECTIONAL TRIODES — TRIAC

For gate control of AC power. P_{GM} = 10 watts; $P_{G(AV)}$ = 0.5 watt. T_{STG} −40°C to +125°C.

REFERENCE DIODE

GE Type F16H1 — Common anode, Vz = 5.6 to 6.8 V. dVz/dT <.025%/°C.

INTEGRATED VOLTAGE REGULATOR (IVR)

The IVR consists of two NPN transistors, a zener diode, and a resistor on a monolithic chip mounted in a TO-98, three-leaded plastic package. It is designed for use as a shunt voltage regulating element and reference amplifier with simple resistor programming.

Type D13V characteristics

	Min.	Typ.	Max.
Regulated voltage range, volts	10	....	40
Temp. coefficient of regulated voltage, %/C	....	.03	0.1
Thevenin impedance, ohms	....	10	50
Thevenin reference voltage, volts	....	8.5	10
Total average power in watts	....	....	400

SILICON REFERENCE AMPLIFIERS (TO-12)

Reference Voltage 7.0 ±5% except RA1 Series, ±10%.

THYRECTOR DIODES

Use as transient voltage suppressors for connection across a-c input of rectifiers. Gives instant response and high dissipation. Temperature stable. Max. operating temp., 100°C. Sizes: 6RS21 1" sq., 6RS20 37/64" dia.

TYPICAL INSTALLATION FOR COOLING AND RETAINING TRANSISTOR

THE ADVANCED LINE OF HALL EFFECT DEVICES AND MAGNETORESISTORS FOR

DETECTION
MEASUREMENT
COMPUTATION
CONTROL
PROBES
MULTIPLIERS
MODULATORS
TAPE HEADS
CURRENT MEASURING RINGS
PICK-UPS
WATTMETERS
TRANSDUCERS

ISC MAGNETICS DIVISION products are the result of over fifteen years research, development and application engineering on Hall Effect components and magneto-resistors for a broad range of detection, measurement, computation and control applications.

More than 30 different Hall generators and 15 different magnetoresistors, all in stock for immediate delivery, are available as standard catalog items.

Our applications engineering staff is at your disposal to discuss requirements for "black boxes" and complete systems involving processing, material handling, current regulation, and other automatic controls for military, space, and industrial applications.

COMPLETE GALVANOMAGNETIC DEVICE CATALOG AVAILABLE.

Numerous other probes, including thin film and ferrite embedded types are described in our catalog and all are stocked for immediate delivery.

Multiplers and current sensing yoke assemblies using Hall Generators or Magnetoresistors can be designed to OEM requirements.

MAGNETORESISTORS

More than 15 different magnetoresistors are stocked covering a wide range of zero field resistances (47 to 5,000 ohms), units with resistance changes of from 1.5 to 3.2 and temperature coefficients of from −0.05 to −0.40%/°C.

Heat Sinks/Dissipators and Retainers

for semiconductors, integrated circuits and microcircuits

INTERNATIONAL ELECTRONIC RESEARCH CORPORATION
a corporate division of DYNAMICS CORPORATION OF AMERICA
135 West Magnolia Blvd. Burbank, California 91508 213/849-2481

Dissipation capabilities from milliwatts to kilowatts in natural convection and forced air environments

IERC pioneered development of semiconductor heat dissipators and continues to design and produce the most efficient and economical cooling devices available. Because of space considerations, this Short Form Catalog lists only the most popular models of these devices. If you don't see a device which precisely meets your requirements, get in touch with your local IERC Technical Sales Representative (see back cover) or contact the factory. Chances are excellent that we have exactly the device you need in stock.

CUSTOM DESIGNS — Tooling is already available for hundreds of variations of the standard products listed in this catalog. From this reservoir most special requirements can be met without additional tooling charges. In addition, IERC has a large staff of design and application engineers to serve you in developing special products to meet your individual needs. Consult your IERC Technical Sales Representative or the factory for assistance on modified or custom products.

HOW TO ORDER FROM THIS CATALOG — The heat sinks/dissipators and retainers listed in this catalog are standard products designed to meet the requirements of most semiconductor case types. Concise instructions for ordering these products have been included in the product listings.

VARIOUS STANDARD MATERIALS AND FINISHES — IERC products are available in a variety of hole patterns, mounting configurations, materials and finishes for all commercial and military applications. For example, Thermal Link retainers are available in beryllium copper for use when a constant retaining force is required for severe shock and vibration environments, or where the semiconductor must be inserted and removed from the retainer numerous times. They are also available as unplated brass parts, at a considerable cost savings, for use when functional requirements are less stringent. Various finishes are also available, including IERC's electrically insulating finish, *Insulube 448* (See below), for isolating semiconductors with electrically hot cases. As space allowed, instructions for ordering these variations have been included; however, for further assistance contact your local IERC Technical Sales Representative or the factory.

IMMEDIATE DELIVERY — Authorized industrial distributors throughout the U.S. and Canada provide immediate availability from local stock of the broad IERC standard product line.

INSULUBE 448® FINISH FOR HEAT DISSIPATORS

Insulube 448 is the only proven finish for positive electrical insulation (up to 500 volts DC) in electronic equipment that meets the most stringent environmental requirements. Non-hygroscopic. High emissivity surface. Salt spray resistant. Low thermal resistance. Unaffected by elevated temperature. High dielectric strength. High insulation resistance. Write for Bulletin 123.

MOST PARTS IN THIS CATALOG MAY BE COVERED BY ONE OR MORE OF THESE U. S. PATENTS: 3,195,628; 3,277,346; RE25,184; 3,213,336; 3,212,569; 3,208,511; 3,213,324 AND/OR PATENTS PENDING.

INSULUBE 448 IS A REGISTERED TRADE MARK OF INTERNATIONAL ELECTRONIC RESEARCH CORPORATION.

Lead-Mounted metal case semiconductors

TO-5, TO-8, TO-18 case size transistors and IC

For additional dissipators for TO-8 case size transistors and IC's, see pages 1 and 1901. For additional dissipators for TO-5 IC's, see page 1900.

THERMAL LINK SERIES

Thermal Links are excellent thermal links between semiconductor and chassis heat sink and are also efficient retainers and heat sinks when mounted to boards because of their excellent conductivity and extra mass. Beryllium copper fingers under spring tension firmly retain the semiconductor, permit wide diameter variations, and simplify transistor insertion and removal. Available beryllium oxide (BeO) washer for high frequency applications. Write for Bulletins 141 and 144.

Note: For large quantity commercial applications both parts may be ordered in brass, unplated or with a black oxide finish, at considerable cost savings. Change model number to TXCF-032-025CB and TXCF-019-025CB for brass, black oxide; and TXCF-032-025U and TXCF-019-025U for brass, unplated.

Lead-Mounted plastic case semiconductors R097, R097A and D-type case size transistors

Low cost IERC dissipators/retainers help you get maximum efficiency from lead-mounted plastic case semiconductors. All series provide increased power capabilities (from 10% to 30%), additional operating and safety margins, reduction of failure due to solder heat, and excellent retention in shock and vibration environments. All models available in brass or beryllium copper. Write for Bulletin 148.

SPADE SERIES

Excellent dissipators and retainers. "Stand off" legs provide positive 0.1" grid location for automatic insertion in P-C board; hold transistor above solder, eliminating possible thermal damage. Also provide RF shielding.

Heat Sinks/Dissipators and Retainers

for semiconductors, integrated circuits and microcircuits

Integrated circuits and microcircuits

DUAL IN-LINE PACKAGES (14 LEADS)

Used to retain DIP's when sockets are used in the assembly, or when the IC's are soldered directly into the board. The Conduction Base fits between the circuit board and the bottom of the DIP case, closing the air gap and making positive thermal contact to the bottom of the DIP case. The Retainer Clip is then inserted over the IC case and the hardware secured, or the assembly soldered in. With Retainer Clip and Conduction Base, a temperature reduction of 16°C at a dissipation level of 700 milliwatts is obtained. When the dissipator is added, dissipation can be increased to 1.2 watts with no rise in substrate temperature. Retainer Clip and Conduction Base are made of beryllium copper. The heat dissipator is aluminum. Write for Bulletin 154.

IC'S IN THE TO-5 CASE SIZE*

Compact, highly efficient dissipators for controlling the temperature sensitive parameters of TO-5 IC's. Their use minimizes the spread of electrical characteristics and, because they limit an increase in junction temperature, allows significant increases in the power level. Both retainers and bases are made of aluminum. Write for Bulletin 158.

IERC ASSEMBLY PART NO. (BASE AND CLAMP)					
UNPLATED	COM'L BLACK ANODIZE	MIL. BLACK ANODIZE	INSULUBE 448	DIMENSION "C" ASSY OR BASE	DIMENSION "C" CLAMP

LP73C4U	LP73C4WCB	LP73C4WB	LP73C4	5/16"	1/4"

Note: Clamps may be used separately as retaining devices. To order, change the number from LP73 to LC5. Bases may also be ordered separately by changing first two letters of assembly part number to "LB".

Standard brass or nylon hardware is available for mounting an LP assembly to a 1/16" board or chassis. Consult your IERC Technical Sales Representative for ordering information.

*Other IERC heat sink/dissipators and retainers are available for IC's in the TO-5 size. These include Thermal Links (page 2) and Fan Tops (page 3). IC's in the TO-18 size can be accommodated by Thermal Links, Fan Tops and LP Series dissipators (pages 2 and 3).

IC'S IN THE TO-3 CASE SIZE

Without a dissipator the TO-3 IC has a case temperature rise of 80°C when 10 watts is dissipated. But, when the IC is mounted in IERC's UP dissipator in natural convection, the 80°C case temperature rise is not reached until 30 watts is dissipated. In forced air environments the efficiency is even higher. At 1000 FPM, the case temperature rise at 10 watts is only 30°C. And, the HP Series which also features IERC's patented, staggered finger design and aluminum construction, provides even greater dissipation. Write for Bulletin 161.

INTERNATIONAL ELECTRONIC RESEARCH CORPORATION
a corporate division of DYNAMICS CORPORATION OF AMERICA

IN TH TO-8 CASE SIZE*

s are the highly efficient, staggered fingered UP and HP Series with hole configurations to accommodate the many leads of the IC. The clamp shown presses the IC flange to the dissipator and is most effective in transferring the heat from the metal case to the dissipator with very minimal resistance. Dissipators and clamps are made of aluminum. Write for Bulletin 143.

Thermalloy heatsinks will also accommodate IC's in the TO-8 case (see page 2).

IERC PART NO.				INTEGRATED CIRCUIT
COM'L BLACK ANODIZE	MIL. BLACK ANODIZE	INSULUBE 448	"C" DIMENSION

IERC PART NO. – CLAMP				
UP-C4CB	UP-C4B	UP-C4		1 TO-8

The clamp is required for all UP and HP Series heat sinks/dissipators used with the IC and must be ordered as a separate item.

IN TE TO-66 CASE SIZE — Single and multiple IC mounting

Most, aluminum dissipators effectively increase the power handling of TO-66 case size IC's, yet require only a small amount of additional area. For example, in natural convection, the LB66B1-67B (single IC) mounted on an epoxy board will dissipate up to 8 watts with case temp of the IC maintained at less than 140° C. The HP3-TO66-40B (4 TO-66 mounted on an epoxy board, will dissipate up to 32 watts with case temperature maintained at less than 140°C. Write for Bulletin 162.

Finned Extrusions

E1, E2 AND E3 SERIES

Optimized fin design gives the most power dissipation for volume and weight. Standard units supplied with mounting notches and choice of six popular semiconductor mounting hole patterns. Write for Bulletins 142 (E1 and E2) and 145 (E3).

EXTRUSION TYPE	IERC PART NO.	SEMI-CONDUCTOR	EXTRUSION TYPE	IERC PART NO.	SEMI-CONDUCTOR
E1 AND E2*	E1003-0600U	TO-3	E3	E3003-0600U	TO-3
	E1006-0600U	TO-6		E3006-0600U	TO-6
	E1015-0600U	TO-15		E3015-0600U	TO-15
	E100V-0600U	UNIVERSAL**		E3066-0600U	TO-66
	E1066-0600U	TO-66		E300V-0600U	UNIVERSAL**
	E1000-0600U	BLANK		E3000-0600U	BLANK

Note: Other lengths in ½" increments are available. Various hole patterns available. Consult your IERC Technical Sales Representative for ordering information.

*For E2 configuration change first numeral of part no. to 2. For example E2000-0600B.

**Combination hole pattern for TO-3, TO-6, TO-36 or studs up to ¼" dia.

"U" at end of part number denotes unplated. For Insulube 448 delete the letter "U". For commercial black anodize, delete letter "U" and add "CB"; for military black anodize, delete letter "U" and add "B".

Fluid Cooled Heat Sinks

Compact, highly efficient aluminum heat sinks for power transistors and diodes. 1000 watts dissipation in less than 45 cu. in. Parallel or series flow; open or closed loop systems. Standard lengths from 6" to 4' in ½" increments. All standard transistor hole patterns available. Standard ¼" tube fittings. Various finishes. Write for Bulletin 147.

Consult your IERC Technical Sales Representative or the factory regarding your specific requirements.

Modular Forced Air Cooling Packages

IERC's design provides the best use of the output of most available fan types for economical thermal control in multiple semiconductor installations. Each of the two types, F400 and F600 Series, has performance comparable to an extrusion type assembly. *F600 Series* units are available with one to four hexagonal banks with six modules each. Cools up to 24 semiconductors with one muffin fan. *F-400 Series* units have one to four banks of four modules each to cool up to 16 semiconductors with one fan. Both Series are available assembled, or in kit form. Order through IERC Technical Sales Representative or direct from factory. Write for Bulletins 136, 137.

ACE SCRs
IR's exclusive Accelerated Cathode Excitation construction offers unique characteristics including faster, cooler turn-on and faster turn-off.

EPITAXIAL SCRs
Still another IR exclusive, the epitaxial process offers precise control of various manufacturing values and therefore precise control of specific characteristics.

HOCKEY-PUK SCRs
IR's Hockey-Puk configuration allows double side cooling to offer higher current ratings than available in similar stud-mounted devices. Note the configurations A-3 and A-4 shown on page 13.

POWER LOGIC TRIACS
IR also offers the highest rated, most powerful triacs in the industry, the 2N5257 series of 200 ampere Logic-Triacs. 60 and 100 ampere Logic-Triacs offer completely different packaging and junctions to extend the range of power triac applications.

SCR FIRING CIRCUITS
To complete the application of SCRs and Triacs, IR lists a comprehensive series of SCR Firing Circuits.

HOW TO USE THIS SECTION
SILICON CONTROLLED RECTIFIERS
Data is listed by current rating on pages 1 and 2. FOR EXAMPLE: For an SCR with an RMS current of 6 amperes, you can choose any of the three series listed below under the 7.4A current rating beginning with "5RC10A." IR's popular 5RC series would offer you:

RMS current rating of 7.4 amperes
Average current rating of 4.7 amperes at a case temperature of 80°C
Typical gate characteristics of 10mA and 1.2V
It is available in the TO-64 case outline and with IR's alloyed-diffused construction.

For a 250 Volt unit, you should select IR's 5RC30A, 300 Volt, 7.4 ampere SCR.

PARAMETERS		RATING	
Symbol	Definition	Symbol	Definition
I_T(RSM)	Max. RMS on-state current	—	Amperes
I_T(AV)	Max. average forward current @ 180° conduction	—	Amperes
	And at the maximum case temperature listed	(°C)	Degrees Celsius
I_{GT}	Typical gate current to trigger @ 25°C	(mA)	Milliamperes
V_{GT}	Typical gate voltage to trigger @ 25°C	(V)	Voltage
Case	Case outline (see pp. 13-15)		
Type	Indicates manufacturing method

(6) Fast turn-off capability

IR FIRING CIRCUITS

IR'S series of Firing Circuits offers the advantages of "Hard Firing" gate signals, a good "back porch" to eliminate "starved gate" conditions, signal isolation, and negative biasing.

SPECIAL ORDER

Many other connections are available. Direct inquiries to your local IR Field Office.

Standard units are available off the shelf. Special order devices will be quoted in quantity shipments.

Firing Circuits for IR's Logic Triacs are available on special order.

STANDARD FIRING CIRCUITS

Part Number	Connection	Voltage	No. of SCR's
FC-100	Single phase	120/240V	1 or 2
FC-200	Three phase, three wire	240/480V	3
FC-300	Three phase, three wire	240/480V	6

POWER LOGIC-TRIACS

IR's three LOGIC-TRIAC series fer circuit designers a wide arr of specification advantages in igh current and voltage ratings. he "logic" capability allows the ec- tion of the conduction direction s a function of the gate voltage pol ty.

UNIJUNCTION TRANSISTOR—IR 0 For timing Circuits and firing Rs case (pp 13-15)TO-92.

Max. Voltage	—V_{B2E} = 30V V_{B2B1} = 35
Emitter Current	—I_E = 50 mA
Valley Current	—I_V = 5 mA m
Max. Power	—P_D = 300 m
Max. Temperature	—125°

INTERNATIONAL RECTIFIER IOR

MICONDUCTOR DIVISION / 233 KANSAS STREET / EL SEGUNDO / CALIFORNIA 90245 / CABLE RECTUSA / TELEPHONE AREA CODE 213 / 678-6281

HIGH POWER SILICON RECTIFIERS

A complete selection of high current, high voltage, high power rectifiers, including popular stud types and the new, double side cooled hockey-puck styles.

SILICON POWER RECTIFIERS—Devices are listed by current rating below. Look for these specifications.

	PARAMETER	RATINGS	
Symbol	Definition	Symbol	Definition
I_F(AV)	Max. average forward current at listed Tc	—	Amperes
I_F(surge)	Max. peak one cycle, non-repetitive surge current	—	Amperes
I^2t	Max. I^2t rating (non-repetitive, for 5 to 8.3 milliseconds)	(A^2sec)	Amperes squared seconds
Case	Case outline (See pp. 13-15)	—	—

Then check for the part number of the voltage required.

FOR EXAMPLE:

For a rectifier with a current rating of 65 amperes and a surge rating of 1,000 amperes, you would locate these parameters under the 70 ampere current rating below.

This Series offers you:
- 70 ampere current rating at 125° case temperature
- 1,200 ampere surge current rating
- 6,000 I^2t rating
- Available in IR's DO-5/B-4 case.

For a rectifier with a 500 Volt rating, you would order IR's part number "70H50A."

(2) Fast Recovery Rectifier—add suffix to part number for Max. reverse recovery time:
S20 = 2.0 μsec.
S15 = 1.5 μsec.
Refer to Engineering Catalog.

(3) Ratings for reverse polarity units differ from basic units. Refer to Engineering Catalog.

(4) Available in B-6 case only.

SELENIUM RECTIFIERS

Listed are the basic specifications for IR's selenium rectifiers. IR offers an extensive selection of standard and special order selenium devices including: power stacks, multi-circuit stacks, cartridges, miniature stacks, diodes, loose cell kits, voltage suppressors (Klip-Sels) and contact protectors. These items are listed in IR's Engineering Brochure B-107.

Your local IR Industrial Distributor or IR Field Office will gladly supply you with complete specifications, ordering assistance, and price and delivery quotations.

ZENER REGULATORS, VOLTAGE REFERENCES & LOW POWER SILICON RECTIFIERS

This section lists basic parameters to give quick, easy reference to Zener Regulators, Voltage Reference Diodes, and Low Power Silicon Rectifiers.

HOW TO USE THIS SECTION

Zener Regulators

Devices are listed by power rating on pages 5 and 6.
Look for these specifications.
Power rating
Maximum operating temperature
Standard tolerance range. (Other tolerances are specified in the Notes section.)
Notes (which are defined on page 5.)
Case style (See pp. 13-15.)
Then check for the part number of the voltage required.

Voltage Reference Diodes

Devices are listed on page 6. They are listed by power rating.
Look for these specifications.
Power rating.
Zener voltage (V_Z)
Zener test Current (I_{ZT})
Zener impedance (Z_Z)
Temperature ranges over which the delta ΔBV rating is measured
Case style (pp. 13-15)
The part numbers are listed opposite the nominal temperature coefficient.

Low Power Rectifiers

Devices are listed by current ratings on page 7.
Look for these specifications.
Current rating.
Maximum Peak One Cycle Surge Current (I_{FSM}[surge]).
Case connection to the stud or case.
Case style. (see pp. 13-15)
Then check for the part number of the voltage required.

Your local IR Industrial Distributor or IR Field Office will gladly supply you with complete specifications, ordering assistance, and price and delivery quotations.

NOTES: For Pages 5 & 6

1. for 1N1313 thru 1N1320 max. temp. = 150°C
2. Part No. / Vz
   - 1N702A 2.3-2.9
   - 1N703A 3.23-3.67
   - 1N704A 3.9-4.3
   - 1N705A 4.58-5.12
   - 1N706A 5.5-6.1
   - 1N707A 6.65-7.55
3. Add 'A' for 5% tolerance
4. Add 'A' for 10% tolerance
5. 1N1961: Vz = 14.5
6. Add 'T5' for 5% tolerance; 'T10' for 10% 'T20' for 20%
7. Add 'A' for 10% tolerance; 'B' for 5%
8. Polarity—Cathode to Stud only.
9. Polarity—Anode to Stud; add 'R' for Cathode to Stud.

NOTES: For Voltage References

(1) ΔBV measured at following temp ranges.
(2) For Z_Z = 10Ω add "A"
(3) "A" suffix type temp. range of ΔBV= —55° to 25°, 25° to 100°
(4) "A" suffix type temp range of ΔBV= —55° to 25°, 25° to 150°
(5) "A" suffix offers lower ΔBV
(6) "A" suffix temp. range ΔBV= —55° to 25°, 25° to 100°
"B" suffix temp. range ΔBV= —55° to °25, 25° to 150°
(7) A version: nom. temp. coeff. = 0.005
Z_Z = twice rating of basic version
Nom. temp. coeff. = 0.01
I_{ZT} = 7.5
ΔBV temp. range= —55° to 25°, 25° to 1

SILICON ASSEMBLIES

Listing includes selected pre-engineered molded and open tack assemblies.
IR has proven record of supplying new and unusual designs to meet stringent or short box parameters.
For further assistance in ordering, or detailed information for designing, call your local Distributor, or your local IR Field Office, or IR's El Segundo offices.

BRIDGE CIRCUIT ASSEMBLIES RATINGS AND CHARACTERISTICS

Part Number(1)	18DB	30DB	50FB	60FB	100PB	B6F	B12F	B70H
Average—Max. Rectifier Output Current (1)	1.8	3.0	3.75	6.0	10.0	12	24	35

LIGHT SENSITIVE DEVICES

IR offers both Silicon and Selenium photovoltaic cells for convenient design and product selection.

Complete specifications and detailed application data are availab For o ing and pricing information, contact your local IR Industrial D ibuto your local IR Field Office, or IR's El Segundo Offices.

SILICON PHOTOVOLTAIC CELLS

Silicon Cells are commonly used for light sensing and power generation because of their high efficiency.

A normal response time for Silicon Cells is 2 microseconds. The cells respond well to the longer wavelength (red) light and poorly to the shorter wavelength (blue) light.

SELENIUM PHOTOVOLTAIC CELLS

Selenium Cells offer color response similar to human vision and are especially useful in ultraviolet range applications. Due to a slightly higher internal impedance, selenium has a slower frequency response than silicon.

SOLAR CELL STANDARD

Precisely calibrated to provide accurate radiation measurement. T stan is the solid-state analog to the pyroheliometer standard. Each cell calib against primary standard cells which were calibrated at Tab Moun California.

This cell is used to check the efficiencies of production silicon sc cells to calibrate artificial light sources in terms of solar energy radiat

Each cell is supplied with an 8½" X 11" curve of the cell output ch cteri Each cell comes in a special carrying case, and the device incorpor s the couple lead and plug-in output terminals.

IR Solar Cell Standard. . . . Part Number SC-9

SILICON READOUT ARRAYS

Designed for perforated tape and punched card data reading systems, analog-to-digital encoders, and shaft positioning systems, these readout photocells provide high speed response to light passing through punched cards or tape.

Typical current generated is 175 μA for 0.01 square inch of active area with load impedance of 1,000Ω and 500 FC illumination.

SELENIUM RECTIFIERS

HIGH VOLTAGE SELENIUM CARTRIDGES

High Voltage Selenium Cartridges, which feature low leakage, high conductivity, stability and reliability.

Part No. 303-59	800 PIV "Boost"	1 1/16" L x 9/32" Dia.
Part No. 303-248	6500 V "Focus"	2 1/16" L x 9/32" Dia.
Part No. 303-351	7500 V	2 3/16" L x 9/32" Dia.
Part No. 303-352	10,000 V	2 15/16" L x 9/32" Dia.
Part No. 303-353	11,000 V	3 3/16" L x 9/32" Dia.
Part No. 303-354	12,000 V	3 5/8" L x 9/32" Dia.
Part No. 303-355	18,000 V	4 5/16" L x 9/32" Dia.
Part No. 303-356	20,000 V	5 5/8" L x 9/32" Dia.

BRIDGE RECTIFIERS FOR SOLENOID, MOTOR AND RELAY OPERATION

A completely wired, single phase bridge rectifier, in a Lexan case, with center mounting and eyelet completely insulated.

Part No. 302-137
130 VAC RMS 100 MA DC 5/8" x 5/8" x 5/16"

Part No. 302-235
250 VAC RMS 80 MA DC 5/8" x 5/8" x 5/16"

Other ratings available upon request.

POWER RECTIFIERS — CONVENTIONAL CONSTRUCTION!

Rectifier cells from 0.7" x 0.7" to 8" x 16" are available as cells or stacks for convection cooling, fan-cooled or oil-cooled applications. The high efficiency, and long life expectancy (100,000 hours without aging) plus transient-free characteristics make this new selenium an economic device to be used in critical applications. The forward voltage drop at rated loads is less than silicon. Therefore, on all low voltage applications, the low voltage drop, high efficiency, long, non-aging life, and freedom from the need for transient suppressors or special mounting hardware, make the Rect-A-Cell rectifiers the most economical device for your applications.

- dV/dt up to > 1000 V/µsec
- Max. operating junction temperature up to 150° C
- Case temperature up to 105° C

Selenium Transient Voltage Suppressors

- 30 or 60 volts clamping voltage per cell
- Up to 800 A single pulse at 1 millisec
- High stability — no aging
- 550 volts max. RMS-input/stack
- Δ-and Y-connected devices for 3-phase applications
- Highly reliable epoxy version up to 15 A single pulse at 1 millisec

Selenium High Density Cells, Type Z,

are available in voltage ratings from 26 to 36 Volts RMS in numerous sizes from 0.7" x 0.7" to 4" x 20" with only 1 volt RMS forward voltage drop at 1000 mA/inch² which makes the cells extremely competitive. For low voltage applications Selenium rectifier assemblies are available up to several thousand of amperes.

CORPORATION 652 Mitchell Road, Newbury Park, California 91320 (805) 498-2111, (213) 628-5392 / TWX: 91[illegible]36-12[illegible]

"METOXILITE" SILICON RECTIFIERS — ALSO AVAILABLE TO NEW MSFC/NASA AND MILITARY SPECIFICATIONS (JAN & TX)

200 TO 1000 VOLTS
LOW REVERSE LEAKAGE
SOLID INTERNAL CONSTRUCTION
SUPERIOR THERMAL SHOCK RESISTANCE
FOR NEW PACKAGING DESIGN

A multi-purpose, high current axial lead silicon rectifier, ideally suited to maximize small electronic package designs. "Metoxilite" (fused metal oxides) is fused to the metallurgically bonded junction/tungsten-pin assembly forming a "tough" subminiature package. Hermetically sealed and designed to meet stringent tempratu[illegible] cycling, humidity and other environment[illegible] requirements per MIL-STD-750A. A gener[illegible] purpose rectifier for use in military, spac[illegible] industrial and consumer product applic[illegible]tions, such as: power supplies, A to D converters and control circuits.

"COMPAC" BRIDGE RECTIFIERS

MULTI-PURPOSE

SOLID SILVER LEADS: DIAMETER .031 ±.002"; LENGTH ⅞" MINIMUM
OPERATING AND STORAGE TEMPERATURE —55°C TO +150°C

Sub-miniature, rugged, highly-reliable and economical, are the only adjectives necessary to describe Semtech's "Compac" silicon bridge rectifiers. Incorporating Semtech's Suprataxial silicon junctions, solid silver leads and high-temperature molding compounds, the units provide maximum mechanical, thermal and electrical reliability. These silicon bridge rectifiers will meet stringent requirements of military, industrial and consumer products applications.

"COMPAC-3" SILICON 3 PHASE

Semtech now offers a line of "Compac" sub-miniature medium power, 3-phase full wave bridge rectifiers. These units utilize Semtech's unique Suprataxial silicon junctions. Sub-miniature size makes these bridge rectifiers easy to package. Use of high temperature compounds provides excellent mechanical, thermal and electrical reliability. These silicon bridge rectifiers easily satisfy the stringent requirements of military and industrial as well as consumer applications.

① Recovery Conditions: 0.5 amp forward current to 1.0 amp reverse current. Recovery time is measured when rectifier recovers to .25 Amps.

Operating and Storage Temperature, —55°C to +150°.

Maximum THERMAL IMPEDANCE junction to mounting surface 5°C/Watt.

ALPAC®-3" 3-PHASE SILICON BRIDGE RECTIFIERS

Alpac-3," a complete line of 3-phase silicon bridge rectifiers and a natural extension to our existing line of "Alpac" single-phase bridges. Design of "Alpac-3" incorporates much the original "Alpac"... aluminum case for maximum thermal conductivity, light weight, and simple installation. "Alpac's" universal terminals provide three ways for electrical connection: fast disconnect, wire wrap around, and hole wire insert for soldering. Internally "Alpac-3" utilizes the Semtech high-performance silicon junctions bonded between solid double tungstaloid pins. "Alpac-3" is especially well suited for utilization in power supplies, AC to DC converters and motor control circuits.

"SLIMPAC"® HIGH VOLTAGE - HIGH CURRENT SILICON RECTIFIERS

The Semtech's "Slimpac" is a new high density high voltage high current silicon rectifier for use in industrial and military applications which require small, lightweight rectifiers without compromise on the required high reliability criteria. Designed and tooled to be efficiently mass produced, "Slimpac" can be used economically in existing applications. The rectifier can be utilized in all standard, single and polyphase rectifier circuits. Designed to be corona free, the unit is capable of meeting stringent electrical, mechanical, and environmental specifications.

"STACPAC"

"Stacpac", a new concept in power rectifier stacks for use in high voltage, high current applications. Unique in design, "Stacpac" completely eliminates all the external component parts and solder joints usually found in devices of this type. All components are encapsulated and connected to aluminum discs, that in turn serve as compensation, cooling fins and corona protection. Internally, "Stacpac" utilizes the Semtech solid construction, double tungstaloid, silicon rectifiers. "Stacpac" was designed specifically to streamline packaging, replace multiple stud rectifiers and auxiliary compensation in high voltage, high current applications.

STACPAC

Mechanical Dimensions:
Width, 3 inches;
1 length includes two insulated mounting legs.

Operating and Storage Temperature, —55°C to +150°C
Note: Although mounting brackets are insulated, care must be taken to assure proper distance to ground planes.

STACPAC HIGH POWER BRIDGE

Operating and Storage Temperature, —55°C to +150°C
Mechanical dimensions: Height 3.5 inches; Width, 3.0 inches; Tolerances, ±.03 inch.
Note: Although mounting brackets are insulated, care must be taken to assure proper distance to ground planes.

*Io Rating Increased:
X2 In Oil Environment
X1.5 With cooling air velocity 500 CFM
X2 With cooling air velocity 1000 CFM

STACPAC DOUBLERS & CENTER TAPS

Operating and Storage Temperature, —55°C to +150°C

ALSO AVAILABLE IN FAST RECOVERY

SPECIAL "STACPAC" HIGH POWER SILICON RECTIFIERS

"STACPAC", a new concept in power rectifier stacks for use in high voltage, high current applications. Unique in design, "STACPAC" completely eliminates all the external component parts and solder joints usually found in devices of this type. All components are encapsulated and connected to aluminum discs, that in turn, serve as compensation, cooling fins and corona protection. Internally, "STACPAC" utilizes the Semtech "METOXILITE" Silicon Rectifiers. "STACPAC" was designed specifically to streamline packaging, replace multiple stud rectifiers and auxiliary components in high voltage, high current applications. Semtech has immediate capability to produce special high current — high voltage assemblies up to and exceeding 500K volts. Please contact our representatives for further details.

HIGH VOLTAGE RECTIFIER

4.5" x 25" x 6.875"

JAN TYPE SILICON RECTIFIERS

emtech Corporation provides a multipurpose Hermetic Seal silicon ctifier incorporating advance design and engineering techniques never before available to the electronics industry at a nominal cost. This new rectifier utilizes solid internal onstruction with a package combining high mechanical strength, superior thermal shock resistance, rugged hermetic seal, high dielectric strength and excellent thermal conductivity properties.

REFER TO INFORMATION ON "METOXILITE" SILICON RECTIFIERS FOR DEVICES THAT ARE AVAILABLE TO NEW MSFC/NASA AND MILITARY SPECIFICATIONS.

① Recovery conditions: 0.5 amp forward current to 1.0 amp reverse current
Recovery time measured when rectifier recovers to .25 amps.
② 0 surges, 1 surge/minute superimposed on Io = 750mA.

Semtech's miniature nanosecond recovery high current silicon rectifiers offer improved rectification efficiency for higher frequency applications. The unit's faster recovery characteristics offer the designer new capabilities for advanced design in reducing mechanical package configurations with improved performance and higher reliability. The rectifier utilizes solid internal construction with a package combining high mechanical strength, superior thermal shock resistance, rugged hermetic seal, high dielectric strength and excellent thermal conductivity. Designed for use in critical industrial and military applications.

"SEMPAC" SUB-MINIATURE HIGH VOLTAGE MIL-S-19500/279(NAVY)

Semtech offers "Sempac" a sub-miniature multipurpose high current silicon rectifier. Cylindrical in design with insulated case and axial leads for simple handling and installation. Better electrical characteristics obtained by the excellent thermal conductivity provided by Semtech's solid internal construction and pure silver leads. Hermetically sealed and designed to meet stringent temperature-cycling and humidity requirements of critical military, industrial and consumer-product applications.

Amplifier Kits 12.5 volt

Kit	Pin	Pout	Fo
SRK2009	0.18	12.0	175MH_z
SRK2010	0.28	24.0	175MH_z
SRK2011	0.30	20.0	175MH_z
SRK2012	0.45	35.0	175MH_z

Amplifier Kits 28 volt

Kit	Pin	Pout	Fo
SRK2002	.015	25.0	175MH_z
SRK2004	0.050	10.0	400MH_z
SRK2006	.0150	10.0	400MH_z
SRK2008	0.050	12.0	400MH_z

DISCRETE DEVICES 28 VOLTS

	Pkg.	Pout
2N5070	TO-60	30w @ 100 MH_z
2N4429-31	SL	5w @ 1 GH_z

DISCRETE DEVICES 12 VOLT

SRD54216	SL	45w @ 150 MH_z
SRF52214	TO66	12w @ 225 MH_z
SRF53215	SL	15w @ 250 MH_z

Many other devices available for any power vs. freq. requirements.

THICK FILM HYBRID

Series regulator
Vout 8 V to 56 volt
Up to 3 amps output
0.5% regulation

Positive regulators
HCCA100 Base Unit
HCCA103 With current limiter
HCCA105 Fet current source and current limiter

Negative regulators
HCCA102 Base Unit
HCCA104 With current source and current limiter

POWER CHIPS

NPN, PNP complements
Gold Backing Available

Plannar Chip

2 AMP FAMILY

65 x 70 mils	V_{CEO}	V_{CBO}
NPN 91XC001-4	40-150	60-175
PNP 69XC001-4	40-100	60-140

5 AMP FAMILY

90 x 100 mils	V_{CEO}	V_{CBO}
NPN 84XC001-4	40-150	60-170
PNP 71XC001-4	40-100	60-140

10 AMP FAMILY

145 x 145 mils	V_{CEO}	V_{CBO}
NPN 85XC001-4	40-150	60-170
PNP 67XC001-4	40-100	60-140

20 AMP FAMILY

210 x 250 mils	V_{CEO}	V_{CBO}
NPN 86XC001-4	40-130	60-150
PNP 63XC001-4	40-100	60-140

Many combinations are available for higher currents and higher voltage.

SOLITRON DEVICES MOS CAPABILITIES

At the present time Solitron Devices is shipping, producing and developing a variety of MOS Integrated Circuits. The advanced state of technology and engineering at Solitron has developed a completely bi-polar compatible technology. The complexity of circuits using this technology shall be readily seen in that announcements will be made shortly on Read Only Memories with capacities up to 4,000 bits of storage on a single chip with decoding. Additional standard product circuits are now in design and will increase our base of shift register and random access memory business.

Solitron DEVICES, INC.

HI-PAC® II 3-PHASE FULL WAVE BRIDGE

Solitron Devices, Inc. introduces the "**Hi-Pac II**" 3 phase full wave bridge and doublers and center tap units. Design features of this unit is, the aluminum case to provide low thermal resistance from junction to mounting surface, and ease of installation.

Internal construction utilizes Solitron's large area junction high current rectifier chips for optimum performance. The device is designed for applications having current requirements of stud rectifiers and where ease of mounting and reliable packaging are of prime importance.

Features

PIV—50 to 1000 volts
Average output current to 25 amperes (Type H, 768) and 35 amperes (Type J27-OC, A)
Aluminum case
Maximum thermal resistance 1.5°C/Watt
Insulated electrical connections
Center tap units output capability to 35A at Tc of 100°C. Doublers output capability to 17.5A at Tc of 100°C. All devices in the **Hi-Pac II** series are available in the fast switch version to PIV's of 600 V. Rating based on a heat sink of approximately 190 sq. inches of radiating surface in still air with a radiating capability of 1°C/Watt.

TYPE NO.	PIV Per leg DC or Recurrent (Volts)
H768-0	50
H768-1	100
H768-2	200
H768-3	300

J527-5C, A	500
J527-6C, A	600
J527-7C, A	700
J527-8C, A	800
J527-9C, A	900
J527-10C, A	1000

Average DC Output Io Tc = Case Temp. 100°C Amps/35,
Average DC Output Io @ T (No Heat Sink) 25°C Amps/5,
Peak 1 Cycle Foreward Surge Amps/300,
Peak Recurrent Foreward Surge Amps/75,
V Max. per leg @ 3A DC 25°C Volts/25,
I Max. per leg @ PIV 100°C uA/250.

Maximum thermal impedance juction to mounting surface 1.5°C/Watt
Maximum operating and storage temperature —55°C to +175°C
All ratings based on the use of a 1°C/Watt heat sink of approx. 190 sq. inch of radiating surface in still air.

VACUUM TUBE RECTIFIERS

Direct replacement of most vacuum tube rectifiers are available as off-the-shelf items. These devices are inexpensive and reliable, usually outlasting the life of the equipment.

SILICON RECTIFIERS

The Solitrode diode is a Hyper-pure hard glass passivated silicon rectifier, manufactured with materials having matched coefficient of expansion. The void free monolithic structure of this device is unique, offering a DOUBLE glass-to-metal hermetically sealed silicon junction. The glass passivated chip is subject to temperatures in excess of 700 deg. C at various processing stages in addition to a final 24-hour high temperature bake. The glass passivated junction is bonded to the terminal stud across the full face of the rectifier chip, enabling the device to handle high current surges. The Solitrode is available with silver leads, in the stud package, and in chip form for hybrid packaging.

SOLITRODE

The Solitron series of epoxy-encapsulated silicon rectifiers, double diffused, replaces the selenium and top hat rectifiers. Since the birth of this family of devices, Solitron has manufactured and supplied to industry over 500 million rectifiers. Their reliability is unquestionable, and they are used widely in many military applications.

To supplement the epoxy rectifier line, a standard stud series is also available covering a wide voltage and current range.

ZENERS

A complete line of devices to 50 watts is available off the shelf from Solitron's zener department. These devices are used for regulating DC voltages, low impedance DC level clamping, clipping, limiting and surge protection within the region of their maximum ratings. For applications where the Delta zener voltage is critical, the TC series (temperature compensated) is available from 10 to 200 volts, Jedec type 1N4057 thru 1N4085.

Solitron Semi Marketing 'In-House' Analyzer Tri-A In order to assure reliable operation when evaluating maximum power dissipation in a semiconductor device, you have to include the important parameter of thermal resistance, junction-to-case. However, we have found that accurate measurement of this parameter has generally been tedious and unstandardized.

The design and development of the TRI-A Thermal Resistance Analyzer has solved this testing problem. Starting with pnp transistor types and then npn, this equipment is now capable of handling 100 percent thermal resistance testing of diodes, transistors, and rectifiers.

The advantages of this method include:
1. It is reliable, accurate, and fast, leading to greater efficiency and reduction of testing time. (The test time is in the order of ¼ sec to 2 sec, 3 sec being a conservative operating level.)
2. It eliminates the liquid used in some liquid-to-liquid methods which are generally time consuming and messy.
3. In some cases the emitter base junction is used; however, the collector-base junction is more standardized regarding gradient and diffusion than the base-emitter junction. This leads to a more linear relationship between voltage drop and junction temperature.
4. The proposed test circuit is universal in that it will measure the thermal resistance of diodes and transistors and their associated thermal time constant.
5. In this method, the thermal resistance of transistors is read directly rather than requiring pencil and paper calculations.

Solitron DEVICES, INC.

FULL WAVE BRIDGE RECTIFIERS

The Solitron 10 Amp Integrated Bridge Rectifier offers a new circuit component for the design engineer. Its versatile package and functional specifications, coupled with a desirable 70 to 420 volt RMS voltage range, makes it ideally suitable for present and future circuit designs.

The BHC series provides the mounting versatility of a TO-3 with the savings of a plastic encapsulant. This results in an inexpensive universal design to meet most of your requirements.

POWER DARLINGTONS

Solitron Darlington Modules represent a unique combination of power semiconductor and power microcircuit technologies. These low cost hybrids offer exceptionally high current gain at high current and high power dissipation levels. Treated as transistors, these modules are applicable in a wide range of amplifier and power switching functions, where current gains much higher than those normally associated with a single conventional device are required.

POWER DRIVER MODULES

Solitron Power Driver Modules are microelectronic functional elements designed to drive loads with high power requirements from low level digital signals. The output circuits can switch power as high as 300 W and voltages to 60 V. A clamp diode is provided for switching inductive loads.

These modules consist of a high power, high gain amplifier, coupled to the output of 3 input expandable logic gate. Full power may be obtained by signals from most monolithic digital logic.

POWER AUDIO AMPLIFIERS

2 Watt—Design of the Solitron 2 Watt class A Audio Amplifier has been optimized for applications with battery voltages of 14 volts. Rated output will be sustained even under elevated temperatures and power supply ranges from 11 to 16 volts.

Operation with inputs of 5mV eliminate the need for preamplifiers. Fewer external components are required than with monolithic amplifiers.

5 Watt & 15 Watt—Solitron Class B Quasi-complementary Audio Amplifiers will produce full output from 350 mV input signals. This makes them compatible with most existing preamplifier designs. Useful feedback compensation can be achieved with no external components. External terminals are provided to permit optional trimming of idle current and crossover characteristics.

These amplifiers are capable of continuous operation at output powers as high as 15 Watts (RMS) operating into conventional speaker loads.

TYPE	P_O (Max) (W)	Voltage Range (V)	Input Voltage @ P_O (Max) (mV)	Frequency Response (Hz)	THD (%)

Power Gain (db)/55
Tc (°C)/—30 to +100

SERIES REGULATORS

The Solitron Series and Shunt Type Voltage Regulators are modules comprised of a voltage reference source, a comparator-amplifier and power control gate.

Both series and shunt modules are hermetically sealed in a TO-3 package. Types BN4000 through BN4009 have a higher dome

TYPE	P_T @ 25°C (W)	No Load to Full Load (%)	20% Change in Input V. (%)	Nominal Output Voltage @ 0.5A (V)	Max. Output Current (A)	Input Voltage Range (V)

SHUNT REGULATORS

Types BN4004, 5, 6, 9, 18 and 22 are shunt regulators that are externally trimmable over a range of ±10% of nominal output voltage. Solitron will normally provide units set for any voltage from 5 to 30 volts. They are normally set under conditions of ½ rated load current, 25°C case, to 5, 6, 9, or 12 volts with a ±3% setting tolerance.

Additional information may be found in a Solitron application note entitled: "DC Voltage Regulator Modules." Available upon request.

TYPE	Nominal Output Voltage @ 50% Load (V)
BN4004	6
BN4005	9
BN4006	12
BN4009	5
BN4018	30

Sensitron Semiconductor

A Sensitron Company

Silicon Rectifier Devices

RECTIFIERS

Flangeless Top Hat .....to 3 amperes, 2000 volts
1N3938 to 1N3940 1N3189 to 1N3191

Epoxy .....to 3 amperes, 1500 volts
1N4001 to 1N4007 1N5391 to 1N5399
1N4245 to 1N4249 1N5170 to 1N5178
1N5197 to 1N5201 1N5400 to 1N5408

Stud Package .....to 40 amperes, 1000 volts

DO-4	DO-5
1N1199A to 1N1206A	1N1191A to 1N1198A
1N1341A to 1N1348A	1N1183A to 1N1190A

Fast Recovery .....to 3 amperes, 100 nanoseconds
1N4823 to 1N4826 1N4942 to 1N4948

ZENER AND REFERENCE DIODES

1N225 to 1N235 1N957 to 1N992
1N429 to 1N430 1N2804 to 1N2846
1N821 to 1N829 1N2970 to 1N3015
1N935 to 1N946 1N4736 to 1N4764

HIGH VOLTAGE RECTIFIERS

Sticks .....to 100 KV and 3 amperes
Doublers .....to 100 KV and 3 amperes

THYRISTORS

Triacs .....to 25 amperes, 1000 volts
SCRs .....to 25 amperes RMS, 1000 volts
2N681 to 2N692 2N1842A to 2N1850

CIRCUIT ASSEMBLIES

Bridges .....to 25 amperes, single phase
to 50 amperes, three phase
Voltage Multipliers .....to 150

Silicon Power Transistors

Voltages to 400 volts available in all packages

To-3 ....to 150 watts, 30 amps (2N3055, 2N3442, 2N3773, etc)
To-5 ....to 10 watts, .5 amps (2N1116, 2N2034, 2N2911, etc)
To-53....to 85 watts, 3 amps (2N389, 2N424, 2N1722, etc.)
To-57....to 40 watts, .8 amps (2N1047A, 2N1050A, etc.)
To-61....to 85 watts, 7.5 amps (2N1724, 2N1209, etc.)
To-66....to 30 watts, 4 amps (2N3054, 2N3441, etc.)
To-82....to 150 watts, 20 amps (2N1015A to E, 2N1016A to E, etc)

Thermistors

Positive Temperature Coefficient
Silicon Resistors to MIL-T-23648A
⅛, ¼ watt to 1%

Negative Temperature Coefficient
Disc, Chip, Probe and Bead types to 1%

5	P	3.00	4.12	1.00	

BERYLLIUM OXIDE HEAT SINKS & INSULATORS

High purity beryllium oxide heat sinks conduct heat better than aluminum yet insulate better than porcelain and have low capacitance.

Mfr's Type	Fig.	For Case	Rated Volts	Size, Inches L	W	H

-800-320-62	Y	1/4" Stud	800	.80	.80	.06

THERMAFILM INSULATORS

Improved replacment for mica washers. Homogeneous film will not chip, fracture, or break. Has dielectric strength of 7000 volts/mil with a useful temperature of —260°C to +400°C.

Mfr's Type	Fig.	For Case	Size, Inches L	W	H

SEMICONDUCTOR MOUNTING PADS

Low cost Thermalloy color-coded mounting pads provide an economical way to protect transistors and integrated circuits from shock and vibration. Achieve uniform spacing above printed circuit boards. Available in Nylon per Mil-20693, Diallyl Phthalate per Mil-M-14F, Type SDG. N denotes Nylon; DAP denotes Diallyl Phthalate.

CARD GUIDES

Precision circuit board card guides made from nylon per MIL-M-20693 snap into place with snap rivets or rods to provide easy spacing and flexibility in assembling Therma-Pak modules. Available in a variety of stock sizes or manufactured to specification.

CUSTOM HEAT SINKS® Let Thermalloy's wide experience help you in your custom heat sink requirements. Thermalloy will evaluate your thermal and mechanical requirements and custom engineer a product to meet your special needs. Our model shop specializes in meeting your prototype needs fast. Thermalloy's specialized production equipment designed for these products — results in high quality at a price normally below the cost of in-house fabrications. Contact Thermalloy for a no-obligation estimate.

SYNTRON

SILICON CONTROLL

SOLID STATE AC AND DC POWER CONTROL. Syntron Silicon Controlled Rectifiers are diffused, three junction, semiconductor units designed for use in medium and high power solid state control applications.

The Silicon Controlled Rectifiers shown on these pages are available in the popular standard JEDEC configurations from 25 amp rms to 235 amp rm with ratings to 1200 PRV repetitive, 1300 PRV transi t.

The Syntron Silicon Controlled Rectifier is a ectif device which exhibits the same reverse voltage valar characteristics found in all Syntron silicon d des. forward direction shows high resistance in the f sta capable of blocking forward voltages. With a ry s

ue of ltage and current applied to the gate, the forward rection changes to a very low resistance allowing high rents to be conducted. This change, termed "turn on," is a t switching function occurring in only a few microseconds.

In a single element application, this device can be used for rect conversion and continuous control of AC to DC power requirements or it can be used as a DC switch to initiate current flow. For AC power control, two silicon controlled rectifiers are required in an inverse parallel connection.

Syntron's rigid quality control, developed through strict avalanche diode requirements and more than 5 years field testing, have yielded the most reliable silicon controlled rectifiers available for solid state power control.

MECHANICAL CHARACTERISTICS	THERMAL CHARACTERISTICS	DIMENSIONS
Base...Hi Strength, Nickel Plated Copper with ¼-28 UNF 2A thread for through mounting on a heat sink. Nickel plating produces low contact resistance and prevents corrosion. Header.....Glass to metal construction, hermetically sealed to base. Weight.....Approximately .385 ounces. Mounting Torque.....30 in. lbs. maximum	θ J-C — Maximum Thermal Resistance, Junction to Case (DC)....1.7°C./W. Tj — Operating Junction Temperature 125°C. Tstg — Storage Temperature −65°C. to 150°C.	Base...Hi Strength, Nickel Plated Copper with ½-20 UNF 2A thread for through mounting on a heat sink. Nickel plating produces low contact resistance and prevents corrosion. Header.....Ceramic to metal construction, hermetically sealed to base. Weight.....Approximately 3.6 ounces (lead type); 3.24 ounces (flag type). Mounting Torque.....150 in. lbs. maximum Note: All Series 35 Silicon Controlled Rectifiers are available with either a lead terminal or flag terminal. When ordering a flag terminal device, add the suffix "F" to the catalog number.	θ J-C — Maximum Thermal Resistance, junction to Case (DC)..0.32°C./W. Tj — Operating Junction Temperature 125°C. SYNTRON

AVALANCHE SILICO

Inherent protection against voltage transients. All Syntron silicon diodes are manufactured using a unique diffusion process that takes full advantage of the avalanche characteristics inherent in silicon.

The avalanche characteristics provide built-in protection against voltage transients by limiting the voltage across the rectifying junction. This reduces the electrical stress which normally results in the surface breakdown pical non-avalanche diodes.

The diodes are manufactured in either standard (reve polarity with a rated peak reverse voltage range 50 1600 volts. The current rating is determined by the mbi condition in which the diode operates. **All Syntron Allanc**

on rectifiers will meet JEDEC specifications, yet all es that comply with the JEDEC specifications do not ssarily meet the capabilities of the Syntron Avalanche fiers.

e curves submitted include reverse power capabilities, al sine phase and three phase current ratings as as the over-all surge current capabilities of the diodes.

If the transient peak power exceeds the reverse power capabilities level, additional protection is required.

The quality is built in these devices and is controlled by rigid test procedures applied to each device before shipment. These test procedures are applied to the diode at a level that will insure its meeting the particular application for which it is intended.

Solid Copper Nickel Plated with 3/4"-16 UNF-2A thread for through mounting on a heat sink. Nickel plating produces low contact resistance and prevents corrosion. Header ..... Ceramic header hermetically sealed to base. Weight ..... Approximately 8.5 ounces Mounting Position .. May be mounted in any position Mounting Torque ..... 600 inch pounds maximum 300 inch pounds minimum Dimensions .. In accordance with JEDEC DO-9 Outline	Storage Temperature Range: −65°C. to +200°C. Operating Temperature Range: Junction .....−65°C. to +175°C. Impedance (°C/W), Junction to Case 0.25 Maximum

SILICON DIODES

Case Style DO-35 Whiskerless

Type
1N4148
1N4149
1N4150
1N4151
1N4152
1N4153
1N4154
1N4305
1N4446
1N4447
1N4448
1N4449
1N4454
1N4606

DIODE ARRAYS

Case Style TO-86 (14 leads)

Type
SDP-1070
SDP-1080
SDP-1090

Case Style 1G-103 (10 lead flat pack)
8 Diode Arrays

Type
SDP1040
SDP1050
SDP1060

Case Style 1G-65C (14 lead flat pack)
16 Diode Arrays

Type
SDP1070
SDP1080
SDP1090

MICRO MINIATURE FAST SWITCHING SILICON DIODES

Case 1G-59

Type
TMD24
TMD25
TMD27

MICRO MINIATURE HIGH CONDUCTANCE DIODES

Type
TMD41
TMD42
TMD45

MICRO MINIATURE SILICON STABISTORS

Type
TMD20
TMD40

NPN SILICON PLANAR POWER TRANSISTORS

NOTES:

1. No suffix equals 10% tolerance, suffix "A" equals 5% tolerance (TMD01 – TMD23, 1N4370 – 1N4372, 1N746 – 1N759, 1N3824 – 1N3828 and 1N3994 – 1N3998)
2. No suffix equals 20% tolerance, suffix "A" equals 10% tolerance, suffix "B" equals 5% tolerance (1N962 – 1N984, EVR3 – EVR150, 3VR3 – 3VR150, 1N3016 – 1N3051, 1N2970 & R – 1N3015 & R, 1N2804 & R – 1N2846 & R, 1N3305 & R – 1N3350 & R)
3. Suffix "R" equals reverse polarity

*Temperature at which forward current rating applies:
"A" indicates ambient temperature rating of a lead mounted rectifier
"C" indicates maximum allowable case or stud temperature at the rated current for stud mounted units.
†Military types

Transitron also manufactures a complete line of silicon rectifier stack assemblies ranging from 0.200 amperes (for half-wave and doubler circuits) to 100 amperes (for three phase bridges). Write for Bulletins.

1N2128 thru 1N2137	DO-5	50V to 500V	35 Amp @ 100°C (Case)
1N2147 thru 1N2153	DO-10	50V to 600V	6 Amp @ 150°C (Case)
1N2154 thru 1N2160	DO-5	50V to 600V	25 Amp @ 150°C (Case)

Mounting and insulating hardware furnished on request at slight additional cost.

Many Transitron stud mounted rectifiers are available in reverse polarity or ceramic base versions on a special basis.

If you want to know

what manufacturers make what products, the **eem** green pages will solve your problem.

Product data is found

in the **eem** white pages they contain just about all the information you need to make a purchase decision.

If you're interested

in finding the address of a specific manufacturer, the **eem** yellow pages is the place to look.

Tell Them You Found It In eem

TUNG-SOL® SILICON POWER RECTIFIERS

Tung-Sol silicon power rectifiers offer distinct advantages over similar competitive types. Exclusive design features combine with Tung-Sol's historically rigid quality control to assure designers unmatched operational reliability. Wide interchangeability permits specification of these outstanding components for most commercial and military applications.

■ All the types shown are available in reverse polarity which may be ordered by the addition of the suffix 'R' to the indicated type number.

I_{FM} (surge)—Peak one-cycle surge current, under same conditions as I_o rating (μA—Microamperes).
I_o—Max. rectified avg. DC output current, resistive or inductive load, 60 cps sine wave input.
I_R(AV)—Max. avg. reverse current measured over full sine wave cycle with max. rated reverse voltage and forward current applied.

TUNG-SOL SILICON RECTIFIER STACKS AND ASSEMBLIES

OW CURRENT STACKS—Simplicity, economy and iciency are derived from the use of pressure-fit di- les. Units of both polarities are pressed directly into e heat sinks. Washers, spacers and other hardware mmon to stud-mounted units are eliminated. Supplied compact modular assemblies for such standard rec- ier circuits as: Single phase center tap; single phase idge and three phase bridge. New designs utilizing igh current" pressfit rectifiers available.

MEDIUM CURRENT STACKS—A newly designed extruded aluminum heat radiator is combined with sili- con rectifiers of low thermal impedance to achieve new efficiencies in size, weight and power output. Flexibil- ity of installation is enhanced by incorporating bolt grooves and interlock channels in the radiators. As- sembly operation is simplified and the stack may be mounted in any desired plane. Made in such assemblies as: Single phase center tap; single phase bridge; three phase bridge and six phase star.

HIGH CURRENT STACKS—Improvements in size, weight and power output factors are achieved through the use of low impedance silicon rectifiers with a spe- cial extruded aluminum heat radiator having serrated fins. These have the same assembly and mounting fea- tures as the medium power stacks. Likewise made as single phase center tap; single phase bridge; three phase bridge and six phase star assemblies, as well as in non-standard configurations.

HIGH VOLTAGE ASSEMBLIES

VSC90—A 90 kv assembly designed for use in all high voltage diode applications including clipper, charging, inverse, or rectifier. Utilizes controlled avalanche di- odes. Oil-sealed construc- tion is of advanced design that provides both increased reliability and operational economy.

CM4

CM2

CM2, CM4 and CM5—Open lattice type assembly permits optimum cooling. Current ratings to 30 amperes half wave. For rectifier, clipper and charging diode appli- cations at 5 kv and higher.

TM2—Controlled avalanche sil- icon diodes in low cost assem- blies for high voltage service as rectifiers, clipping and charg- ing. For use at current ratings to 5.5 amperes half wave.

NITRODE

Zener Diode Replacement List of Popular Jedec Types

Unitrode zener diodes have electrical characteristics equal to or superior to industry 1N types they replace. Generally, Unitrode types are much smaller in size and have a greater capacity than industry 1N types.

INDUSTRY TYPE		UNITRODE TYPE
500 mw		
1N5235 thru 1N5281		UZ3235 thru UZ3281
1 watt		
1N3016 thru 1N3051		UZ3016 thru UZ3051
1N4736 thru 1N4764		1N4736 thru 1N4764

Lead Information

Standard diodes are supplied with "Fine" grade solid silver leads for maximum solderability. For welding or other applications, consult your Unitrode representative for optimum lead material. Tinned copper, nickel clad silver (gold plated), and nickel (gold plated) are denoted by the following suffix letters:

High Voltage Stacks

Body A Leads: .028" tinned copper, 0.75" (min.) long

MAX. LENGTHS

A	B	C
0.50" 12.70 mm	0.85" 21.60 mm	1.125" 28.60 mm

Body B three E leads: .028" tinned copper, 1.25" (min.) long.

IBR® SILICON AVALANCHE INTEGRATED RECTIFIERS

FOR 140 V., 280 V. AND 400 V. RMS OPERATION. 250, 450 AND 650 V. MINIMUM AVALANCHE VOLTAGE

The 1N4436 series Integrated Bridge Rectifiers offer single-phase full-wave rectification* in rigidly constructed, welded packages. The electrically insulated grooved packages offer minimum size and maximum ease in mounting installation.

The specified minimum and maximum avalanche voltage characteristics of the devices permit selection of decreased PRV safety factors in equipment design without greatly reduced transient voltage vulnerability. The Controlled Avalanche characteristic insures that the avalanche voltage occurs below the point where in conventional rectifiers the junction perimeter is degraded or destroyed under transient overvoltage conditions. The avalanche of the internal junction occurs across the entire junction area rather than at the edge of the rectifier die.

Proper heat sinking of the 1N4436 series allows great flexibility in DC output current range. This feature, coupled with the electrically insulated case (insulation strength of 2000 volts minimum) allows the IBR® to be used in many applications where space, current, and cost requirements have not allowed the application of semiconductors. *Also available in all common rectifier circuits.

HIGH VOLTAGE DIFFUSED SILICON POWER RECTIFIERS

SERIES VA • VB • IN4441 • VC • VF • VG

Varo high voltage and high voltage fast recovery time diffused silicon rectifiers are designed for industrial and commercial applications that require high reliability at an economical cost.

These rectifiers offer high voltage ranges in minimum-sized, epoxy-encapsulated packages with low leakage current. All ratings are obtained without the use of special heat sinks or mounting techniques (except VC Series).

They are designed to withstand 500 G's shock and vibration of 100 cps with a peak acceleration of 10 G's.

Applications: television receivers, electrostatic power supplies, electrostatic copiers, electrostatic air filters and precipitators, cathode ray tube power supplies, transmitters, microwave ovens.

VV410 SERIES HIGH Q VARACTOR

FEATURES

- Silicon diffused junction type
- Controlled voltage variable capacitance
- High Q — 90 GHz at 0 volts bias
- Low noise — 1.5 db at X Band
- Quality with long life operation
- Low inductance, hermetically sealed package
- Custom packaging and design
- Designed to meet applicable military specifications

DESCRIPTION

Varadyne 410 Series Varactor Diodes are high Q, low noise, mesa type, silicon varactors recommended primarily for low noise, non-degenerate parametric amplifiers and up-converters with signal frequencies in various microwave bands. These units are extremely stable over a wide temperature range (normally, as low as −79°C). Varactors that are mechanically stable at liquid nitrogen temperature (−196°C) can also be supplied on special order. Capacity is normally controlled within ±33%. However, capacity can be controlled to ±.05 pf if necessary. All varactors shipped from Varadyne are serialized before shipment. Complete manufacturing and test records are maintained in plant to insure repeatability of customer requirements.

APPLICATIONS

The Varadyne VV410 Series of Silicon Parametric Amplifier Varactor Diodes are designed to meet the most severe environmental conditions as required by military specifications. The VV410 Varactor is recommended for low noise, non-degenerate parametric amplifiers and up-converters with signal frequencies in various microwave bands. Low noise g operation has been achieved in the frequency range or to 13.2 GHz.

Higher capacitance types should be chosen if a large ly range is required; lower capacitance types may be os minimum pump power is desired.

The VV410 Series of Varactor Diodes can also be u ze modulators, demodulators, reactance tuners, etc.

HOW TO ORDER

VV	410	3	
VARADYNE VARACTOR	HIGH Q SERIES	PACKAGE TYPE	CU FF FREC NC

SYMBOL	CUT-OFF FREQUENCY						
	1	2	3	4	5	6	7
GHz @ 0 Volts	10	20	30	40	50	60	70
GHz @ −4 Volts	22	44	70	92	115	140	160

CUT-OFF FREQ. SYM.	CRYSTAL CAPACITY SPECIFICATIONS						
	1	2	3	4	5	6	7
Min. Cap @ 0 Volts	2.0	2.0	0.5	0.5	0.3	0.3	0.3
Max. Cap. @ 0 Volts	16	4.0	3.5	3.0	2.0	2.0	2.0

IMPORTANT: Please specify capacity with order. Varadyne standard c ici erance is ±33%. Closed tolerances are available on spec re

20 SERIES HIGH VOLTAGE VARACTOR

- **silicon diffused junction type**
- **requency up to 150 GHz at**
- **uctance, hermetically sealed**
- **and operating temperatures 65°C to +175°C**
- **d to meet applicable military ations**
- **120 volt breakdown**
- **long life operation**
- **packaging and design**

RIPTION

420 Series Varactor Diodes are low leakage, silicon epitaxial recommended for harmonic s, switches, limiters, etc. All kdown voltage types are avail- ne single ended, double ended ype package in a graduated capacitances.

*Has common mode rejection of 60 db or greater at 800 and 60 Hz.

AC Summing (Operational) Amplifiers

Gains up to 10. Summing inputs matched to .02%. Up to 4 inputs. Single or dual channel units available.

Quadrature Rejection Amplifiers

Available with gains of up to 10 and rejection ratios of up to 150:1. Units may be supplied with up to 3 summing inputs. Units operate from 28 or 40V DC.
